APPLICATION FOR A COMPREHENSIVE PLAN AMENDMENT

(To be completed at time of intake)

COMMUNITY DEVELOPMENT

DATE REC'D _____

REC'D BY: C.F. N.

APPLICATION FEE \$2,500

TIDEMARK NO: CPA2008-00002

THE FOLLOWING VERIFIED:

Zoning CPD ☐

Commissioner District ☐ 5

Designation on FLUM ☐ GENERAL INTERCHANGE

(To be completed by Planning Staff)

Plan Amendment Cycle: ☐ Normal ☐ Small Scale ☐ DRI ☐ Emergency

Request No: _____

APPLICANT PLEASE NOTE:

Answer all questions completely and accurately. Please print or type responses. If additional space is needed, number and attach additional sheets. The total number of sheets in your application is: 164

Submit 6 copies of the complete application and amendment support documentation, including maps, to the Lee County Division of Planning. Up to 90 additional copies will be required for Local Planning Agency, Board of County Commissioners hearings and the Department of Community Affairs' packages. Staff will notify the applicant prior to each hearing or mail out.

I, the undersigned owner or authorized representative, hereby submit this application and the attached amendment support documentation. The information and documents provided are complete and accurate to the best of my knowledge.

II. REQUESTED CHANGE (Please see Item 1 for Fee Schedule)

A. TYPE: (Check appropriate type)

☒ Text Amendment

☐ Future Land Use Map Series Amendment
(Maps 1 thru 22)
List Number(s) of Map(s) to be amended

1. Future Land Use Map amendments require the submittal of a complete list, map, and two sets of mailing labels of all property owners and their mailing addresses, for all property within 500 feet of the perimeter of the subject parcel. The list and mailing labels may be obtained from the Property Appraisers office. The map must reference by number or other symbol the names of the surrounding property owners list. The applicant is responsible for the accuracy of the list and map.

At least 15 days before the Local Planning Agency (LPA) hearing, the applicant will be responsible for posting signs on the subject property, supplied by the Division of Planning, indicating the action requested, the date of the LPA hearing, and the case number. An affidavit of compliance with the posting requirements must be submitted to the Division of Planning prior to the LPA hearing. The signs must be maintained until after the final Board adoption hearing when a final decision is rendered.

B. SUMMARY OF REQUEST (Brief explanation):

The request seeks to amend the text of Future Land Use Element Policy 1.3.7 to add a footnote to the designation of Station 230+14 (Miromar Outlet Mall directional median opening) to allow for alternative access improvements in the future, if an analysis demonstrating acceptable operations is submitted to and approved by Lee County Department of Transportation. Miromar has concerns about operational issues, and the solutions mandate an adjustment to station 230+14.

III. PROPERTY SIZE AND LOCATION OF AFFECTED PROPERTY (for amendments affecting development potential of property)

A. Property Location:

1. Site Address: None Exists, Corkscrew Road between I-75 & Ben Hill Griffin
2. STRAP(s): None Exists

RECEIVED
SEP 23 2008

COMMUNITY DEVELOPMENT

2008-00002

B. Property Information

This information is not applicable to a text amendment for a footnote.

Total Acreage of Property: _____

Total Acreage included in Request: _____

Total Uplands: _____

Total Wetlands: _____

Current Zoning: Underlying zoning for road right-of-way is AG-2.

Current Future Land Use Designation: General Interchange

Area of each Existing Future Land Use Category: _____

Existing Land Use: Right of Way

C. State if the subject property is located in one of the following areas and if so how does the proposed change effect the area:

Subject property is not located in one of the areas identified below.

Lehigh Acres Commercial Overlay: _____

Airport Noise Zone 2 or 3: _____

Acquisition Area: _____

Joint Planning Agreement Area (adjoining other jurisdictional lands): _____

Community Redevelopment Area: _____

D. Proposed change for the subject property:

No change is proposed for subject property, this is a text amendment.

E. Potential development of the subject property:

The request is for a text amendment to address traffic concerns for an existing development adjacent to Corkscrew Road. Corkscrew Road is the subject of the text amendment.

1. Calculation of maximum allowable development under existing FLUM: **SEP 23 2008**

Residential Units/Density _____

Commercial intensity _____

Industrial intensity _____

IV. AMENDMENT SUPPORT DOCUMENTATION

At a minimum, the application shall include the following support data and analysis. These items are based on comprehensive plan amendment submittal requirements of the State of Florida, Department of Community Affairs, and policies contained in the Lee County Comprehensive Plan. Support documentation provided by the applicant will be used by staff as a basis for evaluating this request. To assist in the preparation of amendment packets, the applicant is encouraged to provide all data and analysis electronically. (Please contact the Division of Planning for currently accepted formats)

A. General Information and Maps

NOTE: For each map submitted, the applicant will be required to provide a reduced map (8.5" x 11") for inclusion in public hearing packets.

The following pertains to all proposed amendments that will affect the development potential of properties (unless otherwise specified).

-The Amendment does not affect the development potential of property. The adjacent properties are entitled and developed.

1. Provide any proposed text changes.

SEE ATTACHED

2. Provide a current Future Land Use Map at an appropriate scale showing the boundaries of the subject property, surrounding street network, surrounding designated future land uses, and natural resources.

SEE ATTACHED

3. Provide a proposed Future Land Use Map at an appropriate scale showing the boundaries of the subject property, surrounding street network, surrounding designated future land uses, and natural resources.

There is no proposed future land use map.

 2008-00002

RECEIVED

SEP 23 2008

COMMUNITY DEVELOPMENT

4. Map and describe existing land uses (not designations) of the subject property and surrounding properties. Description should discuss consistency of current uses with the proposed changes.

SEE ATTACHED- The existing land use is Corkscrew Road, an arterial road. There is an existing directional access to Miromar Outlets.

5. Map and describe existing zoning of the subject property and surrounding properties.

A zoning map of the area is provided. Roads do not have zoning designations.

6. The certified legal description(s) and certified sketch of the description for the property subject to the requested change. A metes and bounds legal description must be submitted specifically describing the entire perimeter boundary of the property with accurate bearings and distances for every line. The sketch must be tied to the state plane coordinate system for the Florida West Zone (North America Datum of 1983/1990 Adjustment) with two coordinates, one coordinate being the point of beginning and the other an opposing corner. If the subject property contains wetlands or the proposed amendment includes more than one land use category a metes and bounds legal description, as described above, must be submitted in addition to the perimeter boundary of the property for each wetland or future land use category.

This is a text amendment related to Corkscrew Road access. Not applicable.

7. A copy of the deed(s) for the property subject to the requested change.

This is a text amendment related to Corkscrew Road access. Not applicable.

8. An aerial map showing the subject property and surrounding properties.

SEE ATTACHED

9. If applicant is not the owner, a letter from the owner of the property authorizing the applicant to represent the owner.

This is a text amendment related to Corkscrew Road access. Not applicable.

 2008-00002

RECEIVED
SEP 23 2008

B. Public Facilities Impacts

NOTE: The applicant must calculate public facilities impacts based on a maximum development scenario (see Part II.H.).

1. **Traffic Circulation Analysis- There is no land use change.**

The analysis is intended to determine the effect of the land use change on the Financially Feasible Transportation Plan/Map 3A (20-year horizon) and on the Capital Improvements Element (5-year horizon). Toward that end, an applicant must submit the following information:

Long Range – 20-year Horizon:

- a. Working with Planning Division staff, identify the traffic analysis zone (TAZ) or zones that the subject property is in and the socio-economic data forecasts for that zone or zones;
- b. Determine whether the requested change requires a modification to the socio-economic data forecasts for the host zone or zones. The land uses for the proposed change should be expressed in the same format as the socio-economic forecasts (number of units by type/number of employees by type/etc.);
- c. If no modification of the forecasts is required, then no further analysis for the long range horizon is necessary. If modification is required, make the change and provide to Planning Division staff, for forwarding to DOT staff. DOT staff will rerun the FSUTMS model on the current adopted Financially Feasible Plan network and determine whether network modifications are necessary, based on a review of projected roadway conditions within a 3-mile radius of the site;
- d. If no modifications to the network are required, then no further analysis for the long range horizon is necessary. If modifications are necessary, DOT staff will determine the scope and cost of those modifications and the effect on the financial feasibility of the plan;
- e. An inability to accommodate the necessary modifications within the financially feasible limits of the plan will be a basis for denial of the requested land use change;
- f. If the proposal is based on a specific development plan, then the site plan should indicate how facilities from the current adopted Financially Feasible Plan and/or the Official Trafficways Map will be accommodated.

Short Range – 5-year CIP horizon:

- a. Besides the 20-year analysis, for those plan amendment proposals that include a specific and immediated development plan, identify the existing roadways serving the site and within a 3-mile radius (indicate laneage, functional classification, current LOS, and LOS standard);
- b. Identify the major road improvements within the 3-mile study area funded through the construction phase in adopted CIP's (County or Cities) and the State's adopted Five-Year Work Program;
Projected 2030 LOS under proposed designation (calculate anticipated number of trips and distribution on roadway network, and identify resulting changes to the projected LOS);

- c. For the five-year horizon, identify the projected roadway conditions (volumes and levels of service) on the roads within the 3-mile study area with the programmed improvements in place, with and without the proposed development project. A methodology meeting with DOT staff prior to submittal is required to reach agreement on the projection methodology;
 - d. Identify the additional improvements needed on the network beyond those programmed in the five-year horizon due to the development proposal.
2. Provide an existing and future conditions analysis for (see Policy 95.1.3):
 - a. Sanitary Sewer
 - b. Potable Water
 - c. Surface Water/Drainage Basins
 - d. Parks, Recreation, and Open Space
 - e. Public Schools.

There is no land use change.

Analysis should include (but is not limited to) the following (see the Lee County Concurrency Management Report):

There is no land use change.

- Franchise Area, Basin, or District in which the property is located;
- Current LOS, and LOS standard of facilities serving the site;
- Projected 2030 LOS under existing designation;
- Projected 2030 LOS under proposed designation;
- Existing infrastructure, if any, in the immediate area with the potential to serve the subject property.
- Improvements/expansions currently programmed in 5 year CIP, 6-10 year CIP, and long range improvements; and
- Anticipated revisions to the Community Facilities and Services Element and/or Capital Improvements Element (state if these revisions are included in this amendment).
- Provide a letter of service availability from the appropriate utility for sanitary sewer and potable water.

In addition to the above analysis for Potable Water:

- Determine the availability of water supply within the franchise area using the current water use allocation (Consumptive Use Permit) based on the annual average daily withdrawal rate.
- Include the current demand and the projected demand under the existing designation, and the projected demand under the proposed designation.
- Include the availability of treatment facilities and transmission lines for reclaimed water for irrigation.

2008-00002

COMMUNITY DEVELOPMENT

SEP 23 2008

- Include any other water conservation measures that will be applied to the site (see Goal 54).
3. Provide a letter from the appropriate agency determining the adequacy/provision of existing/proposed support facilities, including:
 - a. Fire protection with adequate response times;
 - b. Emergency medical service (EMS) provisions;
 - c. Law enforcement;
 - d. Solid Waste;
 - e. Mass Transit; and
 - f. Schools.

NOT APPLICABLE- NO CHANGE

In reference to above, the applicant should supply the responding agency with the information from Section's II and III for their evaluation. This application should include the applicant's correspondence to the responding agency.

C. Environmental Impacts- There is no land use change.

Provide an overall analysis of the character of the subject property and surrounding properties, and assess the site's suitability for the proposed use upon the following:

1. A map of the Plant Communities as defined by the Florida Land Use Cover and Classification system (FLUCCS).
2. A map and description of the soils found on the property (identify the source of the information).
3. A topographic map depicting the property boundaries and 100-year flood prone areas indicated (as identified by FEMA).
4. A map delineating the property boundaries on the Flood Insurance Rate Map effective August 2008.
5. A map delineating wetlands, aquifer recharge areas, and rare & unique uplands.
6. A table of plant communities by FLUCCS with the potential to contain species (plant and animal) listed by federal, state or local agencies as endangered, threatened or species of special concern. The table must include the listed species by FLUCCS and the species status (same as FLUCCS map).

D. Impacts on Historic Resources- There is no land use change.

List all historic resources (including structure, districts, and/or archeologically sensitive areas) and provide an analysis of the proposed change's impact on these resources. The following should be included with the analysis:

1. A map of any historic districts and/or sites, listed on the Florida Master Site File, which are located on the subject property or adjacent properties.
2. A map showing the subject property location on the archeological sensitivity map for Lee County.

E. Internal Consistency with the Lee Plan- **There is no land use change.**

1. Discuss how the proposal affects established Lee County population projections, Table 1(b) (Planning Community Year 2030 Allocations), and the total population capacity of the Lee Plan Future Land Use Map.
2. List all goals and objectives of the Lee Plan that are affected by the proposed amendment. This analysis should include an evaluation of all relevant policies under each goal and objective.
3. Describe how the proposal affects adjacent local governments and their comprehensive plans.
4. List State Policy Plan and Regional Policy Plan goals and policies which are relevant to this plan amendment.

F. Additional Requirements for Specific Future Land Use Amendments

1. Requests involving Industrial and/or categories targeted by the Lee Plan as employment centers (to or from)-

Not applicable, there is no land use change.

- a. State whether the site is accessible to arterial roadways, rail lines, and cargo airport terminals,
 - b. Provide data and analysis required by Policy 2.4.4,
 - c. The affect of the proposed change on county's industrial employment goal specifically policy 7.1.4.
3. Requests moving lands from a Non-Urban Area to a Future Urban Area

There is no land use change.

- a. Demonstrate why the proposed change does not constitute Urban Sprawl. Indicators of sprawl may include, but are not limited to: low-intensity, low-density, or single-use development; 'leap-frog' type development; radial, strip, isolated or ribbon pattern type development; a failure to protect or conserve natural resources or agricultural land; limited accessibility; the loss of large amounts of functional open space; and the installation of costly and duplicative infrastructure when opportunities for infill and redevelopment exist.

2008-00002

RECEIVED
SEP 23 2008

COMMUNITY DEVELOPMENT

4. Requests involving lands in critical areas for future water supply must be evaluated based on policy 2.4.2.

There is no land use change.

5. Requests moving lands from Density Reduction/Groundwater Resource must fully address Policy 2.4.3 of the Lee Plan Future Land Use Element.

There is no land use change.

- G. Justify the proposed amendment based upon sound planning principles. Be sure to support all conclusions made in this justification with adequate data and analysis.

There is no land use change.

Proposed Text Change- Policy 1.3.7

(additions are denoted by underlined text and deletions are denoted by ~~strike-through text~~)

POLICY 1.3.7: The following access control standards will apply to the interstate interchange areas of Luckett Road, Alico Road, Corkscrew Road, and Bonita Beach Road. The specified turning movements are not to be construed as conveying a property right or creating any expectation that they will be a permanent feature. The County reserves the right to modify or further restrict movements as it deems necessary to address operational and safety issues. Access control issues for Daniels Parkway west of I-75 are governed by the controlled access resolution adopted by the Board of County Commissioners on October 4, 1989, as may be amended from time to time. The other interchange areas are state roads where access is controlled by the Florida Department of Transportation under the provisions of Rule 14-97.003, FAC. The standard is a strict requirement during the rezoning and development order processes for cases after the effective date of this policy.

Access Control Standards for Luckett Road and Bonita Beach Road

1. The distance to the first connection will be at least 880 feet, provided such location is outside the federal limited access right-of-way line. A connection is generally defined as a driveway or roadway, limited to right-in/right-out movements, but can include a directional median opening. This distance will be measured from the end of the upstream interchange ramp or the beginning of the downstream interchange ramp, whichever is farther from the centerline of the interstate. A single connection per property not meeting this connection spacing standard may be provided, pursuant to the connection permit process, if no reasonable access to the property exists, and if permitting authority review of the connection permit application provided by the applicant determines that the connection does not create a safety, operational or weaving hazard.
2. The minimum distance to the first full movement median opening will be at least 1760 feet as measured from the end of the upstream interchange ramp or the beginning of the downstream interchange ramp, whichever is farther from the centerline of the interstate.
3. Connections and median openings consistent with the above spacing standards may still be denied in the location requested when the Lee County Traffic Engineer determines, based on the engineering and traffic information provided in the permit application, that the safety or operation of the interchange or the limited access highway would be adversely affected.
4. Connections and median openings existing prior to 1998 that do not meet the standards are allowed to remain (unless they need to be closed for operational safety reasons), but cannot expand movements, except in the case of County roadway extensions.

Access Control Standards for Alico Road

The access on Alico Road is limited to the following movements and locations, from west to east and excluding the area within the interstate limited access right-of-way:

STATION	DISTANCE ⁽¹⁾	MEDIAN OPENING?	MOVEMENT	CONNECTION
160+59.33	n/a	Yes	All	Oriole Road
170+54.54	995.21 ft.	Yes ⁽²⁾	All	Alico Int. Park DRI
177+74.54	720 ft.	Yes	All	Three Oaks Parkway
222+81	n/a	Yes	EB to NB Left-in ⁽³⁾ Rt-in/Rt-out from N&S	Coca-Cola Bottling Co. (N) University Plaza(S)
234+44	1163 ft.	Yes	All	Ben Hill Griffin Pkwy.

Footnotes:

- (1) Distance measured from next connection to the west.
- (2) Unsignalized only. Subject to future restrictions if traffic signal warranted.
- (3) A WB to SB left-in may be allowed if sufficient right-of-way is provided and an analysis demonstrating acceptable operation is submitted to and approved by LCDOT.

Access Control Standards for Corkscrew Road

The access on Corkscrew Road is limited to the following movements and locations, from west to east and excluding the area within the interstate limited access right-of-way:

STATION	DISTANCE ⁽¹⁾	MEDIAN OPENING?	MOVEMENT	CONNECTION
172+84	n/a	Yes	All	Three Oaks Parkway
179+44	660 ft.	Yes	EB to NB Left-in ⁽²⁾ Rt-in/Rt-out from N&S	Corkscrew Crossing (#1)
185+29	585 ft.	Yes	All	Corkscrew Crossing (#2)
187+83	254 ft.	No	Rt-in/Rt-out from N ⁽³⁾	Pic-N-Run Entrance
190+34	253 ft.	Yes	EB to NB Left-in Rt-in/Rt-out from N	Estero Int. Com. Park (#3)
194+29	395 ft.	Yes	WB to SB Left-in NB to SB Left-out Rt-in/Rt-out from S	Corkscrew Woodlands
221+47	n/a	Yes	U-turns only	None
230+14	867 ft.	Yes	EB to NB Left-in Rt-in/Rt-out from N&S ⁽⁴⁾⁽⁵⁾	Miromar Outlet Mall
236+73	660 ft.	Yes	All	Ben Hill Griffin Pkwy.

Footnotes:

- (1) Distance measured from next connection to the west.
- (2) A WB to SB left-in may be allowed at this location if necessary.
- (3) The previously-approved driveway for the Pic-N-Run may remain provided there is not other access; however, if Pic-n-run establishes a connection to the frontage road system and other access locations, the driveway must be removed.
- (4) The Right-in/Right-out from the south already exists at Station 230+65. This connection may be shifted west to any point between Stations 226+30 and 230+65 if proven not to be a traffic safety hazard.
- (5) Alternative access improvements for the Miromar Outlet Mall may be allowed, if an analysis demonstrating acceptable operations is submitted to and approved by LCDOT.

CORKSCREW ROAD ACCESS
COMPREHENSIVE PLAN AMENDMENT

COMMUNITY DEVELOPMENT

Project #07569

September 12, 2008

Prepared by:
DAVID PLUMMER & ASSOCIATES, INC.
1531 Hendry Street
Fort Myers, Florida 33901

CORKSCREW ROAD ACCESS **COMPREHENSIVE PLAN AMENDMENT**

Introduction

Corkscrew Road is one of the primary east-west arterials in south Lee County. It is the principal arterial providing access to major developments in the Corkscrew Road area east of I-75, including Stoneybrook, International Design Center, Grandezza, Bella Terra and Miromar Outlet Mall. In addition, it provides connectivity between some of the major north-south arterials in South Lee County, including US 41, Three Oaks Parkway, I-75 and Ben Hill Griffin Parkway.

The section of Corkscrew Road from Three Oaks Parkway to Ben Hill Griffin Parkway is in the Interstate interchange area and access points along this section of Corkscrew Road are controlled by The Lee Plan, Future Land Use Element Policy 1.3.7. Excerpts from The Lee Plan are provided in Appendix 1 and the specific access points designated by The Lee Plan are summarized in Exhibit 1. As shown in Exhibit 1, Station 230+14 represents the eastbound to northbound directional median opening serving the Miromar Outlet Mall.

Traffic operational problems have been experienced on Corkscrew Road between I-75 and Ben Hill Griffin Parkway. Miromar has been proactively working with the Lee County DOT to address and alleviate these operational issues. As an interim improvement, Miromar lengthened the eastbound left-turn lane at the Miromar Outlets directional median opening on Corkscrew Road by approximately 250 feet.

As part of a long term solution, Miromar has evaluated several improvement alternatives, including the potential future relocation of the Miromar Outlets directional median opening to the west.

The potential relocation of the Miromar Outlets directional median opening and other access improvements would require an amendment to the established access points of The Lee Plan. Therefore, this traffic study has been prepared in support of the proposed amendment to the Comprehensive Plan (The Lee Plan) modifying Future Land Use Element Policy 1.3.7 to allow the possible future relocation of the existing Miromar Outlet Mall directional median opening and other potential access improvements.

Proposed Amendment

The proposed amendment to The Lee Plan; Future Land Use Element Policy 1.3.7 is to add a footnote to the designation of Station 230+14 (Miromar Outlet Mall directional median opening) to allow for alternative access improvements in the future, if an analysis demonstrating acceptable operations is submitted to and approved by Lee County DOT. The proposed amendment is presented below and in Exhibit 2.

Proposed Text Amendment to The Lee Plan,
Future Land Use Element, Policy 1.3.7
Revised Access Control Standards For Corkscrew Road

<u>Station</u>	<u>Distance ⁽¹⁾</u>	<u>Median Opening?</u>	<u>Movement</u>	<u>Connection</u>
172+84	n/a	Yes	All	Three Oaks Parkway
179+44	660 ft.	Yes	EB to NB Left-in ⁽²⁾ Rt-in/Rt-out from N&S	Corkscrew Crossing (#1)
185+29	585 ft.	Yes	All	Corkscrew Crossing (#2)
187+83	254 ft.	No	Rt-in/Rt-out from N ⁽³⁾	Pic-N-Run Entrance
190+34	253 ft.	Yes	EB to NB Left-in Rt-in/Rt-out from N	Estero Int. Com. Park (#3)
194+29	395 ft.	Yes	WB to SB Left-in NB to SB Left-out Rt-in/Rt-out from S	Corkscrew Woodlands
221+47	n/a	Yes	U-turns only	None
230+14	867 ft.	Yes	EB to NB Left-in Rt-in/Rt-out from N&S ⁽⁴⁾ (5)	Miromar Outlet Mall
236+73	660 ft.	Yes	All	Ben Hill Griffin Pkwy.

Footnotes:

- (1) Distance measured from next connection to the west.
- (2) A WB to SB left-in may be allowed at this location if necessary.
- (3) The previously-approved driveway for the Pic-N-Run may remain provided there is not other access; however, if Pic-n-run establishes a connection to the frontage road system and other access locations, the driveway must be removed.
- (4) The Right-in/Right-out from the south already exists at Station 230+65. This connection may be shifted west to any point between Stations 226+30 and 230+65 if proven not to be a traffic safety hazard. (Relocated and Amended by Ordinance No. 00-22, Amended by Ordinance No. 03-05).
- (5) Alternative access improvements for the Miromar Outlet Mall may be allowed, if an analysis demonstrating acceptable operations is submitted to and approved by LCDOT.

Traffic Circulation Analysis

The Lee County Application for a Comprehensive Plan Amendment, Section IV, Part B.1 requests certain traffic circulation support analysis and documentation information as part of the public facilities impact assessment. The analysis is intended to determine the effect of the land use change on the Financially Feasible Transportation Plan/Map 3A (20-year horizon) and on the Capital Improvement Element (5-year horizon).

The proposed amendment is a "text" amendment only, to allow for potential alternative access improvements in the future, including a possible future relocation of the existing Miromar Outlet Mall access point (Station 230+14) on Corkscrew Road by adding a footnote to the Future Land Use Element Policy 1.3.7. The proposed amendment will not result in any land use, socio-economic data and/or traffic analysis zone (TAZ) modifications. Therefore, no further analyses for the long range (20-year) horizon and/or for the short range (5-year) horizon are necessary per the Section IV, Part B.1 of the Comprehensive Plan Amendment application. However,

alternative access improvements were evaluated and are presented in the following sections of this report.

Improvement Evaluation

Several alternative improvements to improve traffic operations along Corkscrew Road, including a “do nothing” alternative, were evaluated. They are presented in the following reports and included in the appendices to this report. These reports have been submitted to and reviewed by the Lee County DOT.

- Corkscrew Road Traffic Operations Assessment, dated March 6, 2006, Appendix 2.
- Miromar Outlets Corkscrew Road Access Evaluation, dated September 7, 2007, Appendix 3.
- Miromar Outlets Signal Warrant Study, and dated January 31, 2008, Appendix 4.

Since the objective is to improve traffic operations along the Corkscrew Road corridor and provide more efficient access to and from the Miromar Outlet Mall, the “do nothing” alternative is not considered an acceptable alternative.

Two important alternatives included: 1) providing dual eastbound left-turn lanes and signalization at the existing Miromar Outlet Mall directional median opening; and 2) relocating the Miromar Outlet Mall directional median opening to approximately 350 feet west, along with providing dual eastbound left-turn lanes and signalization. Other alternative access improvements are possible and are under consideration. This analysis, however, presents the operational characteristics of the relocation of the directional median opening.

While providing dual left-turn lanes and signalization of the eastbound to northbound left-turn movement at the existing Outlet Mall location will not require a Plan Amendment, the potential relocation of the Miromar Outlet Mall directional median opening to the west will require an amendment to The Lee Plan Policy 1.3.7. Therefore, this traffic study summarizes the potential impacts of the possible relocation as compared to the existing conditions (without improvement).

The proposed improvements associated with the possible future relocation of the Miromar Outlet Mall directional median opening include the following.

- Relocate Miromar Outlets directional median opening approximately 350 feet to the west.
- Provide dual eastbound left-turn lanes (inbound) and dual southbound right-turn lanes (outbound) at the relocated entrance.
- Signalize the eastbound left-turn movement to operate within the “shadow” of the adjacent signals.
- Convert the existing Miromar Outlets entrance to inbound right-turn movement only.

- Extend the eastbound dual left-turn lanes at the Corkscrew Road/Ben Hill Griffin Parkway intersection.
- Provide southbound dual right-turn lanes and separate westbound right-turn lane at the Corkscrew Road/Ben Hill Griffin Parkway intersection.

A detailed arterial analysis of the impacts of the proposed improvements was performed using Synchro/SimTraffic. The analysis is summarized in the report titled Miromar Outlets Corkscrew Road Access Evaluation and dated September 7, 2007. A copy of that traffic study is provided in Appendix 3.

A comparison of the various Measures of Effectiveness (MOE) associated with the proposed improvements, based on an arterial level and a network level analysis, is summarized below.

Comparison of Measures of Effectiveness ⁽¹⁾

<u>Measure of Effectiveness</u>	<u>Without Improvement</u>	<u>With Improvement</u>	<u>Change</u>
<u>Corkscrew Road Arterial Analysis</u>			
Total Delay/Vehicle (Sec/Veh)	13	13	No Change
Total Delay (Hours)	90	91	+1.01%
Stops/Vehicle	0.32	0.28	-12.50%
Stops	7910	6930	-12.40%
Performance Index	112	110.6	-1.25%
Eastbound Average Speed (MPH)	29.2	28.7	-1.71%
Eastbound Arterial LOS	C	C	No Change
Westbound Average Speed (MPH)	28.8	27.4	-4.86%
Westbound Arterial LOS	C	C	No Change
<u>Network Analysis</u>			
Total Delay/Vehicle (Sec/Veh)	17	16	-5.88%
Total Delay (Hours)	167	162	-3.00%
Stops/Vehicle	0.36	0.33	-8.33%
Stops	12,992	11,911	-8.32%
Average Speed (MPH)	24	24	No Change
Travel Time (Hours)	328	322	-1.83%
Performance Index	203.1	195.5	-3.74%

Footnotes:

(1) Based on the Miromar Outlets Corkscrew Road Access Evaluation dated September 7, 2007, Appendix 3.

As shown above, the findings are summarized as follows.

1. Total delay per vehicle on Corkscrew Road was unchanged without and with the improvements. On a network level analysis, the improvements reduced total delay per vehicle by approximately 6% (from 17 seconds to 16 seconds).
2. While the total delay in hours on Corkscrew Road increased slightly by 1% (from 90 hours to 91 hours), the total delay in hours on the network was reduced by 3% (from 167 hours to 162 hours).
3. Stops per vehicle and total number of stops decreased approximately 12% on Corkscrew Road and by approximately 8% on the network.
4. The proposed improvements resulted in a better Performance Index (PI), indicating the combined effect of delay, stops and queuing, on Corkscrew Road, as well as on the network.
5. Based on arterial speeds, Corkscrew Road continues to operate at LOS "C" with the proposed improvements.
6. The proposed improvements maintain the overall network average speed and reduces the network travel time by approximately 2%, with a slight reduction in arterial speed.

In addition to the arterial analysis, SimTraffic simulations demonstrated significant operational improvements at the Miromar Outlet Mall directional median opening and the Ben Hill Griffin Parkway intersections as a result of the proposed improvements. A comparison of the intersection operations without and with the proposed improvements is summarized below.

Intersection Measures of Effectiveness ⁽¹⁾

<u>Measure of Effectiveness</u>	<u>Without Improvement</u>	<u>With Improvement</u>	<u>Change</u>
Corkscrew Road/Miromar Directional Median Opening:			
Total Delay/Vehicle (Sec/Veh)	38.6	14.4	-62.70%
Total Delay (Hours)	37.9	14.0	-63.06%
Total Stops	1,224	916	-25.16%
Average Speed (MPH)	15	24	+60.0%
Eastbound Left 95% Queue (Feet)	849	176 ⁽²⁾	-58.54%
Eastbound Left Queuing Penalty (Veh)	23	0	-23
Corkscrew Road/Ben Hill Griffin Parkway:			
Total Delay/Vehicle (Sec/Veh)	51.9	46.3	-10.79%
Total Delay (Hours)	48.2	42.0	-12.86%
Total Stops	2535	2349	-7.70%

Average Speed (MPH)	6	8	+33.33%
Eastbound Left 95% Queue (Feet)	593 ⁽²⁾	490 ⁽²⁾	-17.30%
Eastbound Left Queuing Penalty (Veh)	15	0	-15

Footnotes:

(1) Based on the Miromar Outlets Corkscrew Road Access Evaluation dated September 7, 2007, Appendix 3.

As shown above, the proposed improvements demonstrated the following.

1. The total delay per vehicle and total delay hours were reduced approximately 63% at the Miromar Directional Median Opening and approximately 11% to 13% at the Ben Hill Griffin Parkway intersection.
2. The total number of stops was decreased approximately 25% and 8% at the Miromar Directional Median Opening and the Ben Hill Griffin Parkway intersection, respectively.
3. Average speed increased at both intersections.
4. The eastbound left-turn queues at the Miromar Directional Median Opening were reduced by approximately 59%, with no queuing penalty and the eastbound left-turn queues at the Ben Hill Griffin Parkway intersection were reduced by approximately 17%, with no queuing penalty.

Conclusions

There are several alternative access improvements to Miromar Outlet Mall under consideration including relocating the directional median opening and providing additional right-in and out access. The proposed relocation of the directional median opening to the west resulted in the following.

- Reduced total delay and delay per vehicle at both the Miromar Directional Median Opening and the Ben Hill Griffin Parkway intersections.
- Reduced total number of stops and stops per vehicle on Corkscrew Road.
- Reduced eastbound left-turn queues at the Miromar Directional Median Opening and the Ben Hill Griffin Parkway intersections.
- Improved performance index on Corkscrew Road.
- Improved traffic flow on Corkscrew Road.
- Increased eastbound left-turn storage at Ben Hill Griffin Parkway by approximately 500 feet.
- Reduced potential for dangerous right angle accidents at the Miromar Outlet Median Opening.
- Increased southbound right-turn storage by approximately 450 feet at Ben Hill Griffin Parkway.

The potential future relocation of the Miromar Outlets directional median opening to the west, along with reconstruction of the internal Mall roadway, improves traffic operations, increases inbound and outbound storage, and facilitates ingress and egress.

The proposed Comprehensive Plan Amendment is a text change to Future Land Use Element, Policy 1.3.7 to allow alternative access improvements, including the possible future relocation of the directional median opening, if both Lee County DOT and Miromar find that it is the best alternative to improve traffic operations along Corkscrew Road.

APPENDIX 1

CORKSCREW ROAD ACCESS – EXCERPTS FROM THE LEE PLAN

POLICY 1.3.2: The General Interchange areas are intended primarily for land uses that serve the traveling public: service stations, hotel, motel, restaurants, and gift shops. But because of their location, market attractions, and desire for flexibility, these interchange uses permit a broad range of land uses that include tourist commercial, general commercial and light industrial/commercial. (Amended by Ordinance No. 94-30, 99-18)

POLICY 1.3.3: The General Commercial Interchange areas are intended primarily for general community commercial land uses: retail, planned commercial districts, shopping, office, financial, and business.

POLICY 1.3.4: The Industrial Commercial Interchange areas are designated to permit a mixture of light industrial and/or commercial uses. This category does not permit heavy industrial uses. Within areas expanded beyond the existing Industrial Commercial Interchange boundaries (on January 1, 2007), retail commercial uses will be limited to 20% of the total floor area and light industrial uses will be a minimum of 50% of the total floor area. (Amended by Ordinance No. 07-10)

POLICY 1.3.5: The University Village Interchange land use category is designed to accommodate both interchange land uses and non-residential land uses related to the University. Development within this interchange area may or may not be related to, or justified by the land use needs of the University. Land uses allowed within this area include those allowed in the Industrial Commercial Interchange category and the associated support development allowed in the University Village. The overall average intensity of non-residential development will be limited to 10,000 square feet of building area per non-residential acre allowed pursuant to Map 16 and Table 1(b). See the definition of Associated Support Development in the Glossary. Cooperative master planning and approval by the Board of Regents will be required prior to development within this land use category. Additionally, any development within this land use category which meets or exceeds the Development of Regional Impact thresholds, either alone or through aggregation, must conform to the requirements of Chapter 380 F.S. (Added by Ordinance No. 92-47, Amended by Ordinance No. 94-30, 00-22)

POLICY 1.3.6: Lee County recognizes that development immediately adjoining the I-75 ramps could render future interchange improvements extremely costly if not prohibitive. To assist the county in evaluating the impacts of specific rezoning proposals located within 1000 feet of I-75 ramps, county staff will estimate the possible right-of-way needs for interchange improvements in that quadrant and present this information during the rezoning process. Where possible, development approvals must be phased to protect land critical for future interchange improvements. (Relocated by Ordinance No. 99-18, Amended by Ordinance No. 00-22)

POLICY 1.3.7: The following access control standards will apply to the interstate interchange areas of Luckett Road, Allico Road, Corkscrew Road, and Bonita Beach Road. The specified turning movements are not to be construed as conveying a property right or creating any expectation that they will be a permanent feature. The County reserves the right to modify or further restrict movements as it deems necessary to address operational and safety issues. Access control issues for Daniels Parkway west of I-75 are governed by the controlled access resolution adopted by the Board of County Commissioners on October 4, 1989, as may be amended from time to time. The other interchange areas are state roads where access is controlled by the Florida Department of Transportation under the provisions of Rule 14-97.003, FAC. The standard is a strict requirement during the rezoning and development order processes for cases after the effective date of this policy.

Access Control Standards for Corkscrew Road

The access on Corkscrew Road is limited to the following movements and locations, from west to east and excluding the area within the interstate limited access right-of-way:

STATION	DISTANCE ⁽¹⁾	MEDIAN OPENING?	MOVEMENT	CONNECTION
172+84	n/a	Yes	All	Three Oaks Parkway
179+44	660 ft.	Yes	EB to NB Left-in ⁽²⁾ Rt-in/Rt-out from N&S	Corkscrew Crossings (#1)
185+29	585 ft.	Yes	All	Corkscrew Crossings (#2)
187+83	254 ft.	No	Rt-in/Rt-out from N ⁽³⁾	Pic-N-Run Entrance
190+34	253 ft.	Yes	EB to NB Left-in Rt-in/Rt-out from N	Estero Int. Com. Park (#3)
194+29	395 ft.	Yes	WB to SB Left-in NB to WB Left-out Rt-in/Rt-out from S	Corkscrew Woodlands
221+47	n/a	Yes	U-turns only	None
230+14	867 ft.	Yes	EB to NB Left-in Rt-in/Rt-out from N&S ⁽⁴⁾	Miromar Outlet Mall
236+73	660 ft.	Yes	All	Ben Hill Griffin Pkwy.

⁽¹⁾ Distance measured from next connection to the west.

⁽²⁾ A WB to SB left-in may be allowed at this location if necessary.

⁽³⁾ The previously-approved driveway for the Pic-N-Run may remain provided there is not other access; however, if Pic-N-Run establishes a connection to the frontage road system and other access locations, the driveway must be removed.

⁽⁴⁾ The Right-in/Right-out from the south already exists at Station 230+65. This connection may be shifted west to any point between Stations 226+30 and 230+65 if proven not to be a traffic safety hazard.

(Relocated and Amended by Ordinance No. 00-22, Amended by Ordinance No. 03-05)

OBJECTIVE 1.4: NON-URBAN AREAS. Designate on the Future Land Use Map categories for those areas not anticipated for urban development at this time.

POLICY 1.4.1: The Rural areas are to remain predominantly rural--that is, low density residential, agricultural uses, and minimal non-residential land uses that are needed to serve the rural community. These areas are not to be programmed to receive urban-type capital improvements, and they can anticipate a continued level of public services below that of the urban areas. Maximum density in the Rural area is one dwelling unit per acre (1 du/acre). (Added by Ordinance No. 97-17, Amended by Ordinance No. 98-09, 00-22, 07-12)

POLICY 1.4.2: The Outer Islands are sparsely settled, have minimal existing or planned infrastructure, and are very distant from major shopping and employment centers. They are not expected to be programmed to receive urban-type capital improvements in the time frame of this plan, and as such can anticipate a continued level of public services below that of other land use categories. The continuation of the Outer Islands essentially in their present character is intended to provide for a rural character and lifestyle, and conserve open space and important natural upland resources. Maximum density is one dwelling unit per acre (1 du/acre). (Amended by Ordinance No. 98-09)

CORKSCREW ROAD TRAFFIC OPERATIONS ASSESSMENT

Background

The Miromar Outlets is an existing factory outlets retail center in South Lee County. The Miromar Outlets is located in the northwest quadrant of the intersection of Corkscrew Road and Ben Hill Griffin Parkway, on the north side of Corkscrew Road between I-75 and Ben Hill Griffin Parkway, Exhibit 1.

Miromar Outlets is approved for a total of 700,000 square feet of commercial space. The existing Miromar Outlets consists of approximately 480,000 square feet of development. The remaining 220,000 square feet at the Miromar Outlets is anticipated to be built out by the year 2010.

Access to the Miromar Outlets includes a full median opening (Miromar North Entrance) and a directional median opening (Miromar South Entrance) onto Ben Hill Griffin Parkway and a directional median opening onto Corkscrew Road. In addition, there is an internal connection to the Germain Arena, which is to the north of Miromar Outlets.

The directional median opening onto Corkscrew Road is located approximately 1,600 feet east of the I-75 east ramps and 660 feet west of the Ben Hill Griffin Parkway intersection. Traffic operational problems have been experienced on Corkscrew Road between I-75 and Ben Hill Griffin Parkway.

This traffic study has been prepared to assess the operations of Corkscrew Road, from just west of I-75 to just east of Ben Hill Griffin Parkway, under various access management scenarios for the Miromar Outlets entrance, and recommend improvements that could alleviate the operational problems and enhance the performance of Corkscrew Road.

Executive Summary

This traffic study has been prepared to assess the operations of the Corkscrew Road corridor from just west of I-75 to just east of Ben Hill Griffin Parkway. This corridor is comprised of the I-75 ramps, Miromar Outlets directional median opening, and the intersection of Ben Hill Griffin Parkway. In addition, there is a right-in/right-out driveway on the south side of Corkscrew Road, between the I-75 east ramps and the Miromar Outlets directional median opening. This driveway serves the Miromar International Design Center.

Synchro 6, which is used in traffic modeling and simulation, was used to assess the performance of Corkscrew Road. Since the buildout of the Miromar Outlets is anticipated by year 2010, the year 2010 was considered as the horizon year for the purposes of this analysis. The arterial analysis for Corkscrew Road, under future 2010 conditions, was conducted for various access

management scenarios and the results are summarized in this report. These scenarios included the following:

- Scenario 1: Maintain existing access conditions with the existing directional median opening at the Miromar Outlets.
- Scenario 2: Convert the Miromar Outlets directional median opening to a right-in/right-out access only.
- Scenario 3: Maintain the directional median opening at the Miromar Outlets and signalize the eastbound left-turn movement.
- Scenario 4: Move the directional median opening at the Miromar Outlets to the west, provide dual eastbound left-turn lanes, and signalize the eastbound left-turn movement.
- Scenario 5: Maintain the existing directional median opening at the Miromar Outlets and prohibit southbound right-turn-on-red (RTOR) movements at the Corkscrew Road/Ben Hill Griffin Parkway intersection.

A comparison of the “measures of effectiveness” for the five scenarios is summarized below.

Comparison of Measures of Effectiveness

<u>Measure of Effectiveness</u>	<u>Scenario 1</u>	<u>Scenario 2</u>	<u>Scenario 3</u>	<u>Scenario 4</u>	<u>Scenario 5</u>
Total Delay/Vehicle (Sce/Veh)	24	24	23	24	24
Total Delay (Hours)	77	80	75	76	77
Stops/Vehicle	0.76	0.47	0.52	0.54	0.76
Stops	8,807	5,658	6,042	6,238	8,807
Performance Index	101	95	92	93	101
Eastbound Average Speed (MPH)	26.2	27.2	25.3	25.1	26.2
Eastbound Arterial LOS	C	C	C	C	C
Westbound Average Speed (MPH)	19.4	19.3	18.5	18.3	19.4
Westbound Arterial LOS	D	D	D	D	D
Corkscrew Road/Ben Hill Griffin Pkwy. Intersection Delay (sec)/LOS	34.4/C	43.9/D	34.2/C	34.3/C	67.8/E
Ben Hill Griffin Pkwy/ Miromar North Entrance Intersection Delay (sec)/LOS	14.9/B	16.9/B	14.9/B	14.8/B	15.1/B

Based on the evaluations presented in this report, it is concluded that converting the Miromar Outlets directional median opening on Corkscrew Road to a right-in/right-out movement only will adversely impact the traffic operations at the Corkscrew Road/Ben Hill Griffin Parkway and Ben Hill Griffin Parkway/Miromar North Entrance intersections by increasing the intersection delay by approximately 13% to 28%.

Signalizing the directional median opening (the eastbound left-turn movement entering the Miromar Outlets) will reduce the total delay and delay per vehicle on Corkscrew Road, maintain the arterial level of service (LOS) at LOS "C" in the eastbound and LOS "D" in the westbound direction, and result in the best performance index of the five alternatives.

Roadway Network

The existing roadway network in the vicinity of the Miromar Outlets is portrayed in Exhibit 1. The major roadways in the vicinity of the Miromar Outlets include I-75, Corkscrew Road and Ben Hill Griffin Parkway.

I-75 is a Florida DOT maintained four-lane Interstate Highway for the purposes of regional travel. Corkscrew Road is an east/west four-lane divided arterial in South Lee County connecting various north/south arterials, including US 41, Three Oaks Parkway and Ben Hill Griffin Parkway, to Interstate 75. Ben Hill Griffin Parkway is a four and six lane divided arterial roadway between Alico Road and Corkscrew Road.

Corkscrew Road

Corkscrew Road is four-lane divided roadway between US 41 and Ben Hill Griffin Parkway. It is a two-lane undivided roadway east of Ben Hill Griffin Parkway. Traffic operational problems have been experienced on Corkscrew Road, between I-75 and Ben Hill Griffin Parkway, and, in particular, at the I-75 ramps, the Miromar Outlets Entrance, and Ben Hill Griffin Parkway.

As part of this traffic study, the segment of Corkscrew Road from just west of I-75 to just east of Ben Hill Griffin Parkway is analyzed. This corridor is comprised of the I-75 ramps, Miromar Outlets directional median opening, and the intersection of Ben Hill Griffin Parkway, Exhibit 2. In addition, there is a right-in/right-out driveway on the south side of Corkscrew Road, between the I-75 east ramps and the Miromar Outlets directional median opening, into the Miromar International Design Center.

Committed Improvements

There are several roadway improvements scheduled for construction in the general vicinity of Miromar Outlets. Some of the more significant roadway improvement projects include the following.

- Corkscrew Road: Four-lane widening from Ben Hill Griffin Parkway to The Habitat Entrance – Fiscal Year 2006.
- Three Oaks Parkway Extension South: New four-lane roadway from East Terry Street to Bonita Bill Drive – Fiscal Year 2006.
- Estero Parkway Extension: New four-lane roadway from Three Oaks Parkway to Ben Hill Griffin Parkway – Fiscal Year 2006.
- Alico Road: Six-lane widening from east of US 41 to Three Oaks Parkway – Under Construction.
- I-75: Six-lane widening from south of Bonita Beach Road to Daniels Parkway – Fiscal Year 2008.
- I-75/Alico Interchange: Interchange Reconstruction – Under Construction.

The 2010 existing plus committed (E+C) roadway network used in this analysis reflects the above improvements.

Future Traffic Volumes

There is significant development along Corkscrew Road east of I-75. Miromar Outlets, which is located on the north side of Corkscrew Road between I-75 and Ben Hill Griffin Parkway, is an existing factory outlets retail center (Exhibit 1). It is approved for a total of 700,000 square feet of commercial space. The existing Miromar Outlets consists of approximately 480,000 square feet of development. The remaining 220,000 square feet is anticipated to be built out by the year 2010.

In addition to the Miromar Outlets, there are several other significant developments along Corkscrew Road and Ben Hill Griffin Parkway, including the Stoneybrook DRI (including the Miromar International Design Center), The Habitat, the Timberland and Tiburon DRI, Miromar Lakes DRI, Gulf Coast Town Center DRI, and Florida Gulf Coast University.

Miromar Outlets is anticipated to be built out by the year 2010. In addition, most of the above developments will be built out by 2010. Therefore, the year 2010 was considered as the horizon year for the purposes of this analysis.

Future 2010 traffic volume projections for the Corkscrew Road corridor were derived from a number of available sources, including the DRI traffic studies. Those traffic studies were previously submitted, reviewed, and accepted by the County and other review agencies. A list of all the traffic studies used in developing the future 2010 traffic volumes is provided Appendix A. The future 2010 traffic projections for the Miromar Outlets were based on the current development, existing traffic counts and the anticipated buildout development. A copy of the

most recent traffic counts conducted at the Miromar Outlets entrances is provided as part of Appendix B.

The future 2010 peak hour traffic volumes at the intersections along Corkscrew Road are summarized in Exhibit 3.

Alternative Scenarios

Synchro 6 was used to evaluate the performance of Corkscrew Road under various access management scenarios. The Synchro 6 roadway network was developed for Corkscrew Road from just west of I-75 south ramps to just east of Ben Hill Griffin Parkway (Exhibit 2).

The future 2010 peak hour traffic volumes at these intersections are summarized in Exhibit 3. Depending on the individual scenario, some specific turning movements were adjusted, when needed. For example, if the Miromar directional median opening on Corkscrew Road was limited to a right-in/right-out movement only, the eastbound left-turn volumes were shifted to the Corkscrew Road/Ben Hill Griffin Parkway intersection and then added to the Miromar North and South Entrances on Ben Hill Griffin Parkway as northbound left-turn movements.

A total of five different scenarios were developed and tested for Corkscrew Road. These scenarios are identified below.

- Scenario 1: Maintain existing access conditions with the existing directional median opening at the Miromar Outlets.
- Scenario 2: Convert the Miromar Outlets directional median opening to a right-in/right-out access only.
- Scenario 3: Maintain the directional median opening at the Miromar Outlets and signalize the eastbound left-turn movement.
- Scenario 4: Move the directional median opening at the Miromar Outlets to the west, provide dual eastbound left-turn lanes, and signalize the eastbound left-turn movement.
- Scenario 5: Maintain the existing directional median opening at the Miromar Outlets and prohibit southbound right-turn-on-red (RTOR) movements at the Corkscrew Road/Ben Hill Griffin Parkway intersection.

Scenarios 3 and 4 were tested with a traffic signal for the eastbound left-turn movement at the Miromar Outlets directional median opening. This signal is intended to facilitate the heavy eastbound left-turn movement entering the Miromar Outlets during the peak hours. The signal will not interfere with the continuous flow of eastbound traffic on Corkscrew Road. Also, there will be no separate green phase for the southbound traffic, except when the eastbound left turn is

protected, since it is a right turn outbound movement only. Therefore, it is not a typical full signal.

Arterial Analysis

For the various scenarios, an arterial analysis was performed for Corkscrew Road using Synchro 6. Synchro 6 is a traffic simulation and modeling software that replicates the signalized intersection capacity analysis as specified in the 2000 Highway Capacity Manual. Also, it has the ability to assess the arterial performance with respect to the traffic signal coordination and signal timing optimization.

For each scenario, the intersection offsets were optimized using Synchro 6, in order to provide the best possible arterial flow on Corkscrew Road. Various Measures of Effectiveness (MOE) were evaluated on an arterial level as well as a network level. The more relevant arterial and network wide MOE's included: performance index (PI); delay per vehicle; total delay hours; arterial level of service; and arterial speeds. In addition, the Corkscrew Road/Ben Hill Griffin Parkway and Ben Hill Griffin Parkway/Miromar North Entrance intersection operations were evaluated.

The various MOE's and arterial analysis results are summarized for each scenario in Exhibits 4 thru 8 for Scenario 1 thru 5, respectively. A comparison of the scenarios is presented in Exhibit 9 and summarized below.

Comparison of Measures of Effectiveness

<u>Measure of Effectiveness</u>	<u>Scenario 1</u>	<u>Scenario 2</u>	<u>Scenario 3</u>	<u>Scenario 4</u>	<u>Scenario 5</u>
Total Delay/Vehicle (Sec/Veh)	24	24	23	24	24
Total Delay (Hours)	77	80	75	76	77
Stops/Vehicle	0.76	0.47	0.52	0.54	0.76
Stops	8,807	5,658	6,042	6,238	8,807
Performance Index	101	95	92	93	101
Eastbound Average Speed (MPH)	26.2	27.2	25.3	25.1	26.2
Eastbound Arterial LOS	C	C	C	C	C
Westbound Average Speed (MPH)	19.4	19.3	18.5	18.3	19.4
Westbound Arterial LOS	D	D	D	D	D
Corkscrew Road/Ben Hill Griffin Pkwy. Intersection Delay (sec)/LOS	34.4/C	43.9/D	34.2/C	34.3/C	67.8/E
Ben Hill Griffin Pkwy/ Miromar North Entrance Intersection Delay (sec)/LOS	14.9/B	16.9/B	14.9/B	14.8/B	15.1/B

As shown in the above and Exhibit 9, the findings are as follows.

1. Total delay per vehicle was 24 seconds for all the scenarios, except for Scenario 3. Scenario 3 (signalized eastbound left-turn movement at the Miromar Outlets directional median opening) produced a slightly lower delay per vehicle of 23 seconds.
2. Total delay on Corkscrew Road varied from 75 hours to 80 hours, for Scenarios 1 to 5. Scenario 3 (signalized eastbound left-turn movement at the Miromar Outlets directional median opening) produced the lowest delay of 75 hours and Scenario 2 (converting the Miromar Outlet directional to a right-in/right-out only) produced the highest delay of 80 hours. (The higher delay for Scenario 2 can be attributed to the heavy eastbound left-turn volumes at the Corkscrew Road and Ben Hill Griffin Parkway intersection).
3. The Performance Index (PI), indicating the combined effect of delay, stops and queuing, varied from 92 to 101 for Scenarios 1 to 5. Scenario 3 (signalized eastbound left-turn movement at the Miromar Outlets directional median opening) produced the best (lowest) PI value of 92 and Scenario 1 and Scenario 5 (existing access and no RTOR at Corkscrew Road/Ben Hill Griffin Parkway intersection) produced the worst (highest) PI value of 101.
4. Based on arterial speeds, Corkscrew Road operated at LOS "C" in the eastbound direction and LOS "D" in the westbound direction for all scenarios.
5. At the Corkscrew Road/Ben Hill Griffin Parkway intersection, the intersection signal delay was approximately 28% higher for Scenario 2 (convert the Miromar Outlets directional to a right-in/right-out movement only) than Scenario 1 (existing access) and Scenario 3 (signalized eastbound left-turn movement at the Miromar Outlets directional median opening).
6. At the Ben Hill Griffin Parkway/Miromar North Entrance intersection, the intersection signal delay was approximately 13% higher for Scenario 2 (convert the Miromar Outlets directional to a right-in/right-out movement only) than Scenario 1 (existing access) and Scenario 3 (signalized eastbound left-turn movement at the Miromar Outlets directional median opening).
7. Scenarios 3 and 4 produced similar MOE's in terms of PI, delay per vehicle, arterial speeds and LOS.

Synchro 6 MOE reports and arterial levels of service reports are provided as part of Appendix C.

Conclusions

The conclusions of this traffic study are summarized below.

1. Miromar Outlets, which is located on the north side on Corkscrew Road between I-75 and Ben Hill Griffin Parkway, is an existing factory outlets retail center. It is approved for 700,000 square feet of commercial development with a buildout of 2010.
2. Access to Miromar Outlets includes a directional median opening onto Corkscrew Road, which is located approximately 1,600 feet east of the I-75 east ramps and 660 feet west of the Ben Hill Griffin Parkway intersection. Traffic operational problems have been experienced on Corkscrew Road, between the I-75 ramps and Ben Hill Griffin Parkway.
3. Based on the detailed arterial analysis, it is concluded that converting the Miromar Outlets directional median opening to a right-in/right-out movement only will adversely effect the operations of the Corkscrew Road/Ben Hill Griffin Parkway and the Ben Hill Griffin Parkway/Miromar North Entrance intersections by increasing the intersection delay by approximately 13% to 28%.
4. Signalizing the eastbound left-turn movement entering the Miromar Outlets will reduce the total delay and delay per vehicle on Corkscrew Road, while maintaining the arterial level of service at LOS "C" in the eastbound and LOS "D" in the westbound direction. In addition, this scenario produced the best (lowest) Performance Index value.

DETAILED MEASURES OF EFFECTIVENESS

Scenario Information

Scenario #1

Filename: G:\06508\Scenario 1.sy7
Location: Corkscrew Road Assessment, #06508
Data Date: 1/23/2006
Timing Plan ID: PM Peak Hr.
Alternative: Scenario 1: Existing Access
Number of Signalized Intersections: 10
Most Popular Cycle Length: 120

Scenario #2

Filename: G:\06508\Scenario 2.sy7
Location: Corkscrew Road Assessment, #06508
Data Date: 1/23/2006
Timing Plan ID: PM Peak Hr.
Alternative: Scenario 2: Right-In/Right-Out Only
Number of Signalized Intersections: 10
Most Popular Cycle Length: 120

Scenario #3

Filename: G:\06508\Scenario 3.sy7
Location: Corkscrew Road Assessment, #06508
Data Date: 1/23/2006
Timing Plan ID: PM Peak Hr.
Alternative: Scenario 3: Directional Signal
Number of Signalized Intersections: 11
Most Popular Cycle Length: 120

Scenario #4

Filename: G:\06508\Scenario 4.sy7
Location: Corkscrew Road Assessment, #06508

Intersection Summary

Area Type: Other
 Cycle Length: 120
 Actuated Cycle Length: 120
 Offset: 72 (60%), Referenced to phase 4:EBT and 8:WBTL, Start of Green
 Natural Cycle: 90
 Control Type: Actuated-Coordinated
 Maximum v/c Ratio: 0.89
 Intersection Signal Delay: 34.4
 Intersection Capacity Utilization 80.9%
 Analysis Period (min) 15
 # 95th percentile volume exceeds capacity, queue may be longer.
 Queue shown is maximum after two cycles.

Intersection LOS: C
 ICU Level of Service D

Splits and Phases: 22: Corkscrew Road & Ben Hill Griffin Parkway

MIROMAR OUTLETS

CORKSCREW ROAD ACCESS EVALUATION

Executive Summary

This traffic study has been prepared to assess the operations of the Corkscrew Road corridor, from just west of I-75 to just east of Ben Hill Griffin Parkway, with improvements proposed by Miromar Outlets. This corridor is comprised of the I-75 ramps, Miromar Outlets directional median opening, and the intersection of Ben Hill Griffin Parkway.

The proposed improvements will relocate the existing Miromar Outlets directional median to the west, provide dual eastbound left-turn lanes, and signalize the eastbound left-turn movement. The existing entrance will be limited to inbound right-turn movement only. In addition, the proposed improvements will allow extending the eastbound dual left-turn lanes at the Corkscrew Road/Ben Hill Griffin Parkway intersection.

Based on the detailed Synchro/SimTraffic analysis the proposed improvements resulted in the following.

- Reduced total delay and delay per vehicle at the Miromar directional median opening and the Ben Hill Griffin Parkway intersections.
- Reduced total number of stops and stops per vehicle on Corkscrew Road.
- Reduced eastbound left-turn queues at the Miromar directional median opening and the Ben Hill Griffin Parkway intersections.
- Improved performance index on Corkscrew Road.
- Improved traffic flow on Corkscrew Road.

Background

The Miromar Outlets is an existing factory outlets retail center in South Lee County. The Miromar Outlets is located in the northwest quadrant of the intersection of Corkscrew Road and Ben Hill Griffin Parkway, on the north side of Corkscrew Road between I-75 and Ben Hill Griffin Parkway, Exhibit 1.

Miromar Outlets is approved for a total of 700,000 square feet of commercial space. The existing Miromar Outlets consists of approximately 570,000 square feet with approximately 90,000 square feet of proposed development (currently under review). The Miromar Outlets is anticipated to be built out by the year 2010.

Access to the Miromar Outlets includes a full median opening (Miromar North Entrance) and a directional median opening (Miromar South Entrance) onto Ben Hill Griffin Parkway and a directional median opening onto Corkscrew Road. In addition, there is an internal connection to the Germain Arena, which is to the north of Miromar Outlets.

The directional median opening onto Corkscrew Road is located approximately 1,600 feet east of the I-75 east ramps and 660 feet west of the Ben Hill Griffin Parkway intersection. Traffic operational problems have been experienced on Corkscrew Road between I-75 and Ben Hill Griffin Parkway. Improvements to the I-75 ramps on Corkscrew Road, combined with some signal timing adjustments by the Lee County DOT, have addressed some of those problems.

Miromar has been pro-actively working with the Lee County DOT to address the operational issues on Corkscrew Road from I-75 to Ben Hill Griffin Parkway. As an interim improvement, Miromar has agreed, as part of the most recent Development Order approval, to lengthen the eastbound left-turn lane at the Miromar Outlets directional median opening on Corkscrew Road by approximately 250 feet and provide two inbound lanes at the entrance.

In addition, Miromar met with the Lee County DOT to discuss a long term alternative for improving the traffic operations on Corkscrew Road, specifically from west of I-75 to east of Ben Hill Griffin Parkway. The proposed improvements would relocate the existing directional median to the west, approximately 350 feet, provide dual eastbound left-turn lanes, and signalize the eastbound left-turn movement. The existing entrance would be limited to inbound right-turn movement only.

Based on the meeting with the Lee County DOT, this traffic study has been prepared to support the proposed improvements at the Miromar Outlets directional median opening and assess the operations of Corkscrew Road with the proposed improvements.

Roadway Network

The existing roadway network in the vicinity of the Miromar Outlets is portrayed in Exhibit 1. The major roadways in the vicinity of the Miromar Outlets include I-75, Corkscrew Road and Ben Hill Griffin Parkway.

Corkscrew Road is four-lane divided roadway between US 41 and Ben Hill Griffin Parkway. It is a two-lane undivided roadway east of Ben Hill Griffin Parkway. Traffic operational problems have been experienced on Corkscrew Road, between I-75 and Ben Hill Griffin Parkway, and, in particular, at the I-75 ramps, the Miromar Outlets Entrance, and Ben Hill Griffin Parkway.

As part of this traffic study, the segment of Corkscrew Road from just west of I-75 to just east of Ben Hill Griffin Parkway is analyzed. This corridor is comprised of the I-75 ramps, Miromar Outlets directional median opening, and the intersection of Ben Hill Griffin Parkway. In addition, there is a right-in/right-out driveway on the south side of Corkscrew Road, between the I-75 east ramps and the Miromar Outlets directional median opening, into the Miromar International Design Center.

Existing Traffic Volumes

The Lee County DOT provided the Synchro network files, including the existing peak hour, peak season signal timing plans. In addition, the Lee County DOT also provided the latest intersection turning movement counts at the following intersections, Appendix A.

- I-75 SB Ramps/Corkscrew Road
- I-75 NB Ramps/Corkscrew Road
- Corkscrew Road/Ben Hill Griffin Parkway

The driveway volumes at the Miromar directional median opening were derived from the most recent Development Order (DO) traffic impact statement. The resultant turning movement volumes at the study area intersections are presented in Exhibit 2.

Existing Access

Miromar Outlets has a full median opening (Miromar North Entrance) and a directional median opening (Miromar South Entrance) onto Ben Hill Griffin Parkway and a directional median opening onto Corkscrew Road. In addition, there is an internal connection to the Germain Arena, which is to the north of Miromar Outlets.

The directional median opening onto Corkscrew Road is located approximately 1,600 feet east of the I-75 east ramps and 660 feet west of the Ben Hill Griffin Parkway intersection, Exhibit 3.

Proposed Improvements

Miromar has been pro-actively working with the Lee County DOT to address and alleviate the operational issues on Corkscrew Road from I-75 to Ben Hill Griffin Parkway. As an interim improvement, Miromar agreed, as part of the most recent Development Order approval, to lengthen the eastbound left-turn lane at the Miromar Outlets directional median opening on Corkscrew Road by approximately 250 feet and provide two inbound lanes.

In addition, Lee County DOT has implemented operational improvements at the intersection of Corkscrew Road and Ben Hill Griffin Parkway to restricted southbound right turn on red movements.

The proposed improvements now being evaluated include the following.

- Relocate the existing directional median approximately 350 feet to the west.
- Provide dual eastbound left-turn lanes.
- Signalize the eastbound dual left-turn movement.
- Convert the existing entrance to inbound right-turn movement only.

The proposed improvements are depicted on Exhibit 4.

The proposed improvements will not only address the traffic operations at the Corkscrew Road/Miromar Outlets directional median opening by providing a second eastbound left-turn lane under signal control, but will also provide additional stacking for the eastbound dual left-turn lanes at the Corkscrew Road/Ben Hill Griffin Parkway intersection. These improvements should improve traffic flow on Corkscrew Road.

Synchro/SimTraffic Analysis

An arterial analysis was performed for Corkscrew Road using Synchro 6, without and with the proposed improvements. Synchro 6 is a traffic simulation and modeling software that replicates the signalized intersection capacity analysis as specified in the 2000 Highway Capacity Manual. Also, it has the ability to assess the arterial performance with respect to the traffic signal coordination and signal timing optimization.

For each scenario, the intersection offsets were optimized using Synchro 6, in order to provide the best possible arterial flow on Corkscrew Road. Various Measures of Effectiveness (MOE) were evaluated on an arterial level as well as on a network level. The more relevant arterial and network wide MOE's included: performance index (PI); delay per vehicle; total delay hours; arterial level of service; and arterial speeds.

The various MOE's and arterial analysis results are summarized in Exhibit 5 and Exhibit 6 for without improvements and with improvements, respectively. A comparison of the MOE's is summarized below.

Comparison of Measures of Effectiveness ⁽¹⁾

<u>Measure of Effectiveness</u>	<u>Without Improvement</u>	<u>With Improvement</u>	<u>Change</u>
<u>Corkscrew Road</u>			
Total Delay/Vehicle (Sce/Veh)	13	13	No Change
Total Delay (Hours)	90	91	+1.01%
Stops/Vehicle	0.32	0.28	-12.50%
Stops	7910	6930	-12.40%
Performance Index	112	110.6	-1.25%
Eastbound Average Speed (MPH)	29.2	28.7	-1.71%
Eastbound Arterial LOS	C	C	No Change
Westbound Average Speed (MPH)	28.8	27.4	-4.86%
Westbound Arterial LOS	C	C	No Change

Network

Total Delay/Vehicle (Sce/Veh)	17	16	-5.88%
Total Delay (Hours)	167	162	-3.00%
Stops/Vehicle	0.36	0.33	-8.33%
Stops	12,992	11,911	-8.32%
Average Speed (MPH)	24	24	No Change
Travel Time (Hours)	328	322	-1.83%
Performance Index	203.1	195.5	-3.74%

Footnotes:

(1) Based on the Synchro 6 arterial level of service and measures of effectiveness reports. Please see Appendix B.

As shown above, the findings are as follows.

1. Total delay per vehicle on Corkscrew Road was 13 seconds for both scenarios, (without and with the improvements). On a network level, the improvements reduced total delay per vehicle from 17 seconds to 16 seconds.
2. While the total delay on Corkscrew Road increased slightly from 90 hours to 91 hours, the total delay on the network was reduced from 167 hours to 162 hours.
3. Stops per vehicle and total number of stops decreased approximately 12% on Corkscrew Road, as well as on the network.
4. The proposed improvements resulted in a better Performance Index (PI), indicating the combined effect of delay, stops and queuing, on Corkscrew Road as well as on the network level.
5. Based on arterial speeds, Corkscrew Road continues to operate at LOS "C" with the proposed improvements.
6. The proposed improvements maintain the overall network average speed and reduce the network travel time from 328 hours to 322 hours.

Synchro 6 MOE reports and arterial levels of service reports are provided as part of Appendix B.

In addition to Synchro arterial analysis, SimTraffic was used to observe the peak hour traffic simulation. The SimTraffic peak hour traffic simulation demonstrated significant operational improvements at the Miromar directional opening and the Ben Hill Griffin Parkway intersections as a result of the proposed improvements.

The various MOE's and SimTraffic analysis results are summarized in Exhibit 7 and Exhibit 8 for without improvements and with improvements, respectively. A comparison of the intersection operations without and with the proposed improvements is summarized below.

Intersection Measures of Effectiveness ⁽¹⁾

<u>Measure of Effectiveness</u>	<u>Without Improvement</u>	<u>With Improvement</u>	<u>Change</u>
Corkscrew Road/Miromar Directional Median Opening:			
Total Delay/Vehicle (Sce/Veh)	38.6	14.4	-62.70%
Total Delay (Hours)	37.9	14.0	-63.06%
Total Stops	1,224	916	-25.16%
Average Speed (MPH)	15	24	+60.0%
Eastbound Left 95% Queue (Feet)	849	176 ⁽²⁾	-58.54%
Eastbound Left Queuing Penalty (Veh)	23	0	-23
Corkscrew Road/Ben Hill Griffin Parkway:			
Total Delay/Vehicle (Sce/Veh)	51.9	46.3	-10.79%
Total Delay (Hours)	48.2	42.0	-12.86%
Total Stops	2535	2349	-7.70%
Average Speed (MPH)	6	8	+33.33%
Eastbound Left 95% Queue (Feet)	593 ⁽²⁾	490 ⁽²⁾	-17.30%
Eastbound Left Queuing Penalty (Veh)	15	0	-15

Footnotes:

- (1) Based on the SimTraffic performance reports and queuing and blocking reports.
 (2) Average queue length for dual left turn lanes.

As shown above, the proposed improvements demonstrated the following.

1. The total delay per vehicle was reduced approximately 63% at the Miromar directional median opening and approximately 11% at the Ben Hill Griffin Parkway intersection.
2. Total delay hours were decreased approximately 63% at the Miromar directional median opening and approximately 13% at the Ben Hill Griffin Parkway intersection.
3. The total number of stops was decreased approximately 25% and 8% at the Miromar directional median opening and the Ben Hill Griffin Parkway intersection, respectively.
4. Average speed increased by approximately 60% at the Miromar directional median opening and approximately 33% at the Ben Hill Griffin Parkway intersection.
5. The eastbound left-turn queues at the Miromar directional opening were reduced by approximately 59% with no queuing penalty.
6. The eastbound left-turn queues at the Ben Hill Griffin Parkway were reduced by approximately 17% with no queuing penalty.

SimTraffic performance reports and queuing and blocking reports are provided as part of Appendix C. Synchro network files and the corresponding SimTraffic simulation history files are provided on the attached Compact Disc (CD).

TURN COUNT SUMMARY REPORT(C) - VER 1.0

TEXT FILE - CRK3OAK6.TXT

SUMMARY REPORT DATE: 07-06-2007 AND TIME 14:13:08 * FILE NAME CRK3OAK6.TCS
LOCATION: CORKSCREW ROAD/3 OAKS
ANALYST - EARL R. SALLEY
PAGE 1 * COUNT DATE :01/11/06 * START TIME - 1100

TURN COUNT SUMMARY REPORT(C) IS FOR THE FOLLOWING HI-STAR(R) DATA FILES;

FILE # 1 CORK3NBL	FILE # 2 CORK3NBT	FILE # 3 CORK3NBR	FILE # 4 CORK3SBL
FILE # 5 CORK3SBT	FILE # 6 CORK3SBR	FILE # 7 CORK3EBL	FILE # 8 CORK3ET3

APPENDIX 4

MIROMAR OUTLETS SIGNAL WARRANT STUDY
DATED JANUARY 31, 2008

DAVID PLUMMER & ASSOCIATES, INC.

TRANSPORTATION • CIVIL • STRUCTURAL • ENVIRONMENTAL

Memorandum

To: Earl Salley
From: Suresh Karre *SK*
Date: January 31, 2008
RE: **Miromar Outlets Signal Warrant Study, #07569**
cc: Jerry Schmoyer, Mark Gillis, David Plummer, Fort Myers Filing

Overview

Based on our January 17th meeting regarding the proposed Corkscrew Road access improvements, we have prepared a signal warrant analysis for the Corkscrew Road/Miromar Outlets Entrance intersection (hereafter referred to as the subject intersection).

Study Methodology

Of the warrants identified in the MUTCD, four warrants were determined to be applicable to the subject location. The applicable warrants include the following.

- Warrant 1A. Minimum Vehicular Volume
- Warrant 1B. Interruption of Continuous Flow
- Warrant 2. Four Hour Volume
- Warrant 3. Peak Hour Volumes

The above warrants were evaluated at the subject intersection based on the following procedures and conditions.

1. For the purpose of this analysis, the eastbound left-turn movement from Corkscrew Road into the Miromar Outlets was considered as the minor street approach. This is because there is no outbound left-turn movement from the Miromar Outlets onto Corkscrew Road at this intersection.
2. The only conflicting movement at the intersection for the eastbound left-turn is the westbound through movement on Corkscrew Road. Therefore, for the purpose of this analysis, the westbound through movement is considered as the major street approach.

3. Peak hour volumes at the subject intersection were derived from the traffic study titled Miromar Outlets Corkscrew Road Access Evaluation dated September 7, 2007. The existing traffic volumes used in that study (and shown in Appendix A) were provided by Lee County.
4. The existing peak hour volumes were expanded to other analysis period hours based on the shopping center hourly variation factors documented in the Institute of Transportation Engineers (ITE) Trip Generation, Seventh Edition (Shopping Centers, Land Use Code 820, Appendix B) and the hourly variation data for Corkscrew Road from Permanent Count Station (PCS) # 25 as documented in the 2006 Lee County Traffic Count Report, Appendix C.

The eastbound left-turn (minor street approach) volumes at the Corkscrew Road/Miromar Outlets Entrance are presented in Exhibit 1. The westbound through (major street approach) volumes on Corkscrew Road are presented in Exhibit 2.

The posted speed limit on Corkscrew Road is 45 mph. Based on this speed, Corkscrew Road meets the threshold of a major street speed exceeding 40 mph. Therefore, the 70% values listed in the MUTCD were applicable for this analysis.

Warrant Results

The four applicable traffic volume warrants were reviewed based on the eastbound left-turn volumes and the westbound through volumes on Corkscrew Road, Exhibit 3. The warrant results are summarized as follows. The signal warrant analyses are presented in Exhibits 4 to 6.

Signal Warrant Analyses

<u>Signal Warrant</u>	<u>Warrant Status</u>
1A. Minimum Vehicular Volume	Met
1B. Interruption of Continuous Traffic	Met
2. Four Hour Volume	Met
3. Peak Hour Volumes	Met

Conclusions

Based on the above analysis, it is concluded that the intersection of Corkscrew Road/Miromar Outlets Entrance satisfies Signal Warrants 1A, 1B, 2 and 3 as set forth in the MUTCD.

EXHIBIT 4

TRAFFIC SIGNAL WARRANT SUMMARY

City: _____ Engineer: David Plummer & Associates
 County: Lee Date: January 22, 2008
 Major Street: Westbound Corkscrew Road Lanes: 2 Critical Approach Speed: 45 mph
 Minor Street: Miromar Outlet Inbound Left Turns Lanes: 1

Volume Level Criteria

1. Is the critical speed of major street traffic > 70 km/h (40 mph)? ☒ Yes ☐ No
 2. Is the intersection in a built-up area of isolated community of <10,000 population? ☐ Yes ☒ No
- If Question 1 or 2 above is answered "yes", then use "70%" volume level ☒ 70% ☐ 100%

WARRANT 1 - EIGHT-HOUR VEHICULAR VOLUME

Warrant 1 is satisfied if Condition A or Condition B is "100%" satisfied.
 Warrant is also satisfied if both Condition A and Condition B are "80%" satisfied.

Applicable: ☒ Yes ☐ No
 Satisfied: ☒ Yes ☐ No

Condition A - Minimum Vehicular Volume

100% Satisfied: ☒ Yes ☐ No
 80% Satisfied: ☐ Yes ☐ No

(volumes in veh/hr)	Minimum Requirements (80% Shown in Brackets)				Eight Highest Hours							
					11 AM- 12 PM	12-1	1-2	2-3	3-4	4-5	5-6	7-8
	1		2 or more									
Volume Level	100%	70%	100%	70%								
Both Approaches on Major Street	500 (400)	350	600 (480)	420	1051	1120	1154	1189	1206	1223	1223	1016
Highest Approach on Minor Street	150 (120)	105	200 (160)	140	308	340	311	283	276	293	297	301

Record 8 highest hours and the corresponding volumes in boxes provided. Condition is 100% satisfied if the minimum volumes are met for eight hours. Condition is 80% satisfied if parenthetical volumes are met for eight hours.

Condition B - Interruption of Continuous Traffic

Condition B is intended for application where the traffic volume is so heavy that traffic on the minor street suffers excessive delay.

Applicable: ☒ Yes ☐ No
 Excessive Delay: ☒ Yes ☐ No
 100% Satisfied: ☒ Yes ☐ No
 80% Satisfied: ☐ Yes ☐ No

(volumes in veh/hr)	Minimum Requirements (80% Shown in Brackets)				Eight Highest Hours							
					11 AM- 12 PM	12-1	1-2	2-3	3-4	4-5	5-6	7-8
	1		2 or more									
Volume Level	100%	70%	100%	70%								
Both Approaches on Manor Street	750 (600)	525	900 (720)	630	1051	1120	1154	1189	1206	1223	1223	1016
Highest Approach on Minor Street	75 (60)	53	100 (80)	70	308	340	311	283	276	293	297	301

Record 8 highest hours and the corresponding volumes in boxes provided. Condition is 100% satisfied if the minimum volumes are met for eight hours. Condition is 80% satisfied if parenthetical volumes are met for eight hours.

County: <u>Lee</u>	Date: <u>January 22, 2008</u>
Major Street: <u>Westbound Corkscrew Road</u>	Lanes: <u>2</u> Critical Approach Speed: <u>45 mph</u>
Minor Street: <u>Miromar Outlets Inbound Left Turn</u>	Lanes: <u>1</u>

Volume Level Criteria

- | | | |
|--|---|--|
| 1. Is the critical speed of major street traffic > 70 km/h (40 mph)? | ☒ Yes | ☐ No |
| 2. Is the intersection in a built-up area of isolated community of <10,000 population? | ☐ Yes | ☒ No |
| If Question 1 or 2 above is answered "yes", then use "70%" volume level | | |
| | ☒ 70% | ☐ 100% |

WARRANT 2 - FOUR-HOUR VEHICULAR VOLUME

If all four points lie above the appropriate line, then the warrant is satisfied.

Applicable: ☒ Yes ☐ No
Satisfied: ☒ Yes ☐ No

Plot four volume combinations on the applicable figure below.

* Note: 115 vph applies as the lower threshold volume for a minor street approach with two or more lanes and 80 vph applies as the lower threshold volume threshold for a minor street approach with one lane.

Four Highest Hours	Volumes	
	Major Street	Minor Street
11AM-12PM	1051	308
12-1	1120	340
1-2	1154	311
7-8	1016	301

* Note: 80 vph applies as the lower threshold volume for a minor street approach with two or more lanes and 60 vph applies as the lower threshold volume threshold for a minor street approach with one lane.

EXHIBIT 6

TRAFFIC SIGNAL WARRANT SUMMARY

City: _____ Engineer: David Plummer & Associates
 County: Lee Date: January 22, 2008
 Major Street: Westbound Corkscrew Road Lanes: 2 Critical Approach Speed: 45 mph
 Minor Street: Miromar Outlets Inbound Left Turn Lanes: 1

Volume Level Criteria

1. Is the critical speed of major street traffic > 70 km/h (40 mph)? ☒ Yes ☐ No
 2. Is the intersection in a built-up area of isolated community of <10,000 population? ☐ Yes ☒ No
 If Question 1 or 2 above is answered "yes", then use "70%" volume level ☒ 70% ☐ 100%

WARRANT 3 - PEAK HOUR

If all three criteria are fulfilled or the plotted point lies above the appropriate line, then the warrant is satisfied.

Applicable: ☒ Yes ☐ No
 Satisfied: ☒ Yes ☐ No

Unusual condition justifying
 use of warrant:
Outlet Mall

Record hour when criteria are fulfilled
 and the corresponding delay or volume in
 boxes provided.

Peak Hour		
5-6	297	1223

Criteria

1. Delay on Minor Approach *(vehicle-hours)		
Approach Lanes	1	2
Delay Criteria*	4.0	5.0
Delay*		
Fulfilled?: ☐ Yes ☐ No		

2. Volume on Minor Approach *(vehicles per hour)		
Approach Lanes	1	2
Volume Criteria*	100	150
Volume *		
Fulfilled?: ☐ Yes ☐ No		

3. Total Entering Volume *(vehicles per hour)		
No. of Approaches	3	4
Volume Criteria*	650	800
Volume *		
Fulfilled?: ☐ Yes ☐ No		

Plot volume combination on the applicable figure below.

* Note: 150 vph applies as the lower threshold volume for a minor street approach with two or more lanes and 100 vph applies as the lower threshold volume threshold for a minor street approach with one lane.

* Note: 100 vph applies as the lower threshold volume for a minor street approach with two or more lanes and 75 vph applies as the lower threshold volume threshold for a minor street approach with one lane.
