Aerial Location Map

Subject Property

Project Information

Existing Land Use Designation: Industrial Commercial Interchange

Proposed Land Use Designation: General Interchange

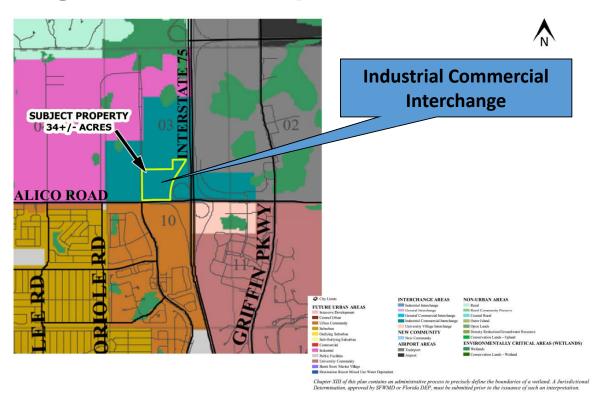

Existing Zoning: Vintage Commerce Center CPD

Project Acreage: 33.95+/- acres

Proposed Request:

> to allow, in addition to commercial and light industrial, multi-family residential uses.

Airport Noise Zone Map

➤ A portion of the southeast corner of the subject property is located in Airport Noise Zone 'C'

Who We Are

➤ LCPA manages the airport facilities supporting air transportation in Southwest Florida. RSW has 4,000 people working at the airport, as well as its own fire and police departments. We maintain roadways and buildings on 7,000 acres of land. RSW is the third-largest airport in the nation for land mass.

Southwest Florida International Airport

Skyplex @ Southwest Florida International Airport

- As a provider of business-process outsourcing, Alta Resources insources care, sales, e-commerce and fulfillment solutions for world-leading companies.
- NeoGenomics is a cancer diagnostics and pharma services company serving oncologists, pathologists, pharmaceutical companies, academic centers, and others with innovative diagnostic, prognostic and predictive testing.

Student Population at Florida Gulf Coast University:

> Total 14,965 students have enrolled into Florida Gulf Coast University where 13,854 students enrolls into undergraduate programs and 1,111 students for graduate programs.

Lee Plan Policies

- POLICY 1.3.2: The General Interchange areas are intended primarily for land uses that serve the traveling public: service stations, hotel, motel, restaurants, and gift shops. But because of their location, market attractions, and desire for flexibility, these interchange uses permit a broad range of land uses that include tourist commercial, general commercial, light industrial/commercial, and multi-family dwelling units. The standard density range is from eight dwelling units per acre (8 du/acre) to fourteen dwelling units per acre (14 du/acre). Maximum density is twenty-two dwelling units per acre (22 du/acre).
- POLICY 2.1.1: Most residential, commercial, industrial, and public development is expected to occur within the designated future urban areas on the Future Land Use Map through the assignment of very low densities to the non-urban categories.

Lee Plan Policies (cont'd)

- POLICY 2.2.2: Map 1 of the Future Land Use Map series indicates the uses and density ranges that will ultimately be permitted on a given parcel.
 However, it is not a guarantee that such densities or uses are immediately appropriate, as the map provides for the county's growth beyond the Lee
 Plan's planning horizon of 2030. During the rezoning process the Board of County Commissioners will balance the overall standards and policies of this
 plan with three additional factors:
 - 1. Whether a given proposal would further burden already overwhelmed existing and committed public facilities such that the approval should be delayed until the facilities can be constructed; and
 - 2. Whether a given proposal is for land so far beyond existing development or adequate public facilities that approval should be delayed in an effort to encourage compact and efficient growth patterns; and
 - 3. Whether a given proposal would result in unreasonable development expectations that may not be achievable because of acreage limitations contained in the Acreage Allocation Table (see Policy 1.7.6, Map 16 and Table 1(b)). Additional provisions related to mining are provided in Policy 33.1.4. In all cases where rezoning is approved, such approval does not constitute a determination that the minimum acceptable levels of service (see Policy 95.1.3) will be available concurrent with the impacts of the proposed development. Such a determination must be made prior to the issuance of additional development permits, based on conditions which exist at that time, as required by Lee County's concurrency management system.
- POLICY 5.1.5: Protect existing and future residential areas from any encroachment of uses that are potentially destructive to the character and
 integrity of the residential environment. Requests for conventional rezonings will be denied in the event that the buffers provided in Chapter 10 of the
 Land Development Code are not adequate to address potentially incompatible uses in a satisfactory manner. If such uses are proposed in the form of a
 planned development or special exception and generally applicable development regulations are deemed to be inadequate, conditions will be
 attached to minimize or eliminate the potential impacts or, where no adequate conditions can be devised, the application will be denied altogether.
 The Land Development Code will continue to require appropriate buffers for new developments.

Conclusions

- > Amendment is internally consistent with the Lee Plan
- > Multi-family housing in growth area supported by Florida Gulf Coast University, Southwest Florida International Airport and nearby employment is sound Planning policy
- > Area supported with adequate infrastructure of roads, transit, utilities, schools, fire and EMS

Thank you
