RE: Daniels South Comprehensive Plan Amendments
CPA2021-00017 & CPA2021-00018 – 2nd Insufficiency Response

Dear Mr. Dunn,

The purpose of this letter is to provide a response to the Lee County Department of Community Development's review comments dated July 15, 2022, for the Comprehensive Plan Amendment applications referenced above. We appreciate the coordination and assistance from Staff over the past few months related to this application.

We welcome additional calls and emails from County Staff that will continue to help us address all comments in the most efficient manner possible.

1. The surface water performance model, supplied by the applicant, examined conditions during the wet season. This area of Lee County experiences stress to the Sandstone aquifer during the dry season and this stress causes the aquifer to reach levels that are close to or meet the Maximum Developable Limit (MDL) of the aquifer. Staff is concerned that added stress to the Sandstone aquifer because of the additional wells may cause water levels to exceed the MDL. How will water withdrawal from the eight proposed Sandstone aquifer wells will impact nearby residents during 90 days of no rainfall?

RESPONSE: As part of the Applicant's Timber Creek residential development, located directly across Daniels Parkway from the subject property, the County required the installation of a Sandstone Aquifer monitoring well. Based on the well's Completion Report, the top of the Sandstone Aquifer was intersected at a depth of 85 feet below land surface. The surveyed land surface elevation at the wellhead is 29.55 feet NAVD, therefore, the top of the Sandstone Aquifer is at elevation -55.45 feet NAVD (29.55' – 85' = -55.45').

The MDL is determined by adding at 20 feet to the top elevation of the Sandstone Aquifer which equals elevation -35.45 feet NAVD (-55.45' + 20 = -35.45'). On June 28, 2022 a dry season groundwater level elevation was recorded in the monitor well at a depth of 20.96 feet below the measuring point which equals a water level elevation of 11.32 feet NAVD. The Sandstone Aquifer water level elevation is, therefore, 46.77 feet above the MDL (11.32' - -35.45' = 46.77'). Daily monitoring of the Sandstone Aquifer is ongoing at Timber Creek and recent groundwater elevation levels are increasing with the onset of the rainy season. Therefore, while Sandstone Aquifer groundwater levels in certain areas of Lee County have been impacted due to over extraction, the area in which the subject property is located appears to have significantly better water resource conditions.

In order to maintain local water resource conditions, the Daniels South irrigation system is designed to conjunctively use two sources of water; 1) surface water from the project's stormwater wet detention lakes; and 2) groundwater from the Sandstone Aquifer. As a result, the overall use of groundwater is anticipated to be greatly reduced, and at times intermittent to nonexistent, since the primary source of irrigation supplies is stormwater. However, to provide additional assurance that the proposed Sandstone Aquifer groundwater withdrawals will not result in adverse impacts, the irrigation demands used in a groundwater modeling analysis performed by Progressive Water Resources (PWR) were based on a 1-in-10 drought frequency, i.e., drought conditions. In addition, the model simulation assumes zero surface water quantities being derived from the project's stormwater wet detention lakes, a condition considered virtually impossible since it is predicated upon the wet detention lakes being completely empty for a duration of 90 days.

Therefore, the assumptions used in PWR's groundwater modeling analysis are considered highly conservative. Despite these conservative assumptions, modeling indicates that the maximum month (dry season) drawdown from the operation of the irrigation running continuously for 90 days with no recharge is less than 1 foot at the project's eastern property boundary. Given the conservative nature of the modeling exercise described above, there are no adverse impacts anticipated to occur to nearby existing legal users. However, in order to provide additional assurance that adverse interference will not occur, the Applicant agrees to install a dedicated Sandstone Aquifer monitoring well as part of Daniels South development, shown in Figure 1a. The well is proposed to be installed along the project's eastern boundary and daily groundwater level measurements initiated upon issuance of the first Development Order. These initial readings will represent background, i.e. predevelopment, water levels and are proposed to continue for three years after project build-out or until such time that an adequate database of groundwater elevation data is achieved to County Staff's satisfaction. The proposed Daniel's South monitoring well, in conjunction with the existing monitor well at Timber Creek, and the USGS Sandstone Monitoring Well L-729, located approximately 3.3 miles to the east along Highway 82, will collectively provide Lee County an unparalleled ability to assess Sandstone Aquifer groundwater levels along the northern reaches of the DR/GR.

2. Please expand on the analysis of Lee Plan policies 33.2.1 and 126.1.1 regarding use of the Sandstone aquifer. Has the applicant considered options to reduce the use of the Sandstone aquifer? Such as using a blend of Lower Hawthorn and Sandstone aquifer wells. The Lower hawthorn aquifer has a higher salt content but when blended with the Sandstone aquifer the lake water can yield quality irrigation water.

RESPONSE: Lee Plan Policy 33.2.1 regards the protection of existing subdivisions from external adverse impacts and Lee Plan Map 2-D identifies such an area along Shawnee Road, to the east of the proposed residential development. Onsite inspections indicate that there are numerous residential structures (ranchettes) located along Shawnee Road and review of Lee County's Permitted Wells database indicates that most, if not all, of the residences utilize the Sandstone Aquifer for potable and irrigation supplies. As described in the response to the question above, the Applicant's proposed groundwater withdrawals are anticipated to have a de minimis impact on existing groundwater levels and nearby existing legal users. In addition, as shown in Figure 1a, the Applicant has proposed a dedicated Sandstone Aquifer groundwater monitoring well to provide additional assurance that adverse interference will not occur, in accordance with Lee Plan Policy 33.2.1. Therefore, the suggested use of the artesian and highly mineralized Lower Hawthorn Aquifer is not warranted.

Lee Plan Policy 126.1.4 requires developments to maintain or improve surface water flows, groundwater levels, and lake levels at or above existing conditions. As provided in the application documents, the proposed residential development satisfies Lee Plan Policy 126.1.4 due to its proposed interconnection of the historic surface water basins (Six Mile Cypress to the west and the Estero River to the east) allowing for increased hydration of the northern DR/GR. In addition, groundwater flow modeling indicates that adverse reductions to existing Sandstone Aquifer groundwater levels will not occur as a result of the proposed irrigation system. Therefore, the proposed development satisfies Lee Plan Policy 126.1.4.

3. Staff are still reviewing the Surface and Groundwater model provided the applicant. Staff may have additional comments once the review of the model is completed.

RESPONSE: Acknowledged. If upon completion of Staff's review, there are any questions or comments regarding the modeling submitted in support of the proposed development, please do not hesitate to contact the Professional Engineer that performed the analysis.

4. As part of the resubmittal, the applicant provided an approved SFWMD formal wetland jurisdictional determination but the proposed Future Land Use Map and Legal Description do not reflect the approved wetland lines. Please clarify if the applicant will be amending the Wetland FLU to reflect the approved JD lines as part of this application or if a separate Map Boundary Determination will be submitted.

RESPONSE: The Applicant has received a Jurisdictional Determination (JD) from the South Florida Water Management District. A signed and sealed & digital copy of the Special Purpose Survey accepted by SFWMD are provided. Legal Descriptions will not be prepared in lieu of the survey so the Wetland Future Land Use category can be amended to reflect the JD.

5. The Indigenous Preservation, Restoration, and Management Plan states that 383.30 acres of indigenous restoration, including OSW and berm restoration, will occur on the property. Please clarify how many acres of the wetland and upland restoration will occur within the 10,000' Hazardous Wildlife Buffer. Please include the number of wetland restoration acres and the number of upland restoration acres.

RESPONSE: The Hazardous Wildlife Buffer contains 239.40± acres of wetland restoration and 62.66± acres of upland restoration.

Wetland Restoration

- **229.79± acres of Indigenous Wetland Restoration.**
- **1.77± acre of Other Surface Waters (OSW) to be Restored to Indigenous Wetlands.**
- **7.84± acres of Berms to be Restored to Indigenous Wetlands.**

239.40± acres of Wetland Restoration.

Uplands Restoration

- **53.88± acres of Indigenous Upland Restoration.**
- **4.03± acres of Other Surface Waters (OSW) to be Restored to Indigenous Uplands.**
- **4.75± acres of Berms to be Restored to Indigenous Uplands.**

62.66± acres of Upland Restoration.

There is a total of 543.90± acres of preserve within the Southwest Florida International Airport 10,000-Foot Hazardous Wildlife Buffer (Buffer).

Preservation and Enhancement

- **181.05± acres of Indigenous Wetland Preserve and Enhancement.**
- **60.79± acres of Indigenous Upland Preserve and Enhancement.**

241.84± acres of Indigenous Preserve and Enhancement.

Total Preservation, Enhancement and Restoration

- **241.84± acres of Indigenous Preserve and Enhancement.**
- **239.40± acres of Wetland Restoration.**
- **62.66± acres of Upland Restoration.**

543.9± acres of Preserve, Enhancement and Restoration.

6. The Protected Species Management and Human-Wildlife Coexistence Plan states that wading bird habitat and foraging areas will be provided through the preservation, enhancement and restoration of 507.2 acres of wetlands. Additionally, the plan states that removal of exotic plants and installation of native plants will result in habitats that are more suitable for wading bird foraging and roosting. How much of this preserved, enhanced and restored wetland habitat will be located within the 10,000' Hazardous Wildlife Buffer? Please address how these wetland habitat improvements within the buffer is consistent with Objective 47.2, as the statements in the Protected Species Management and Human-wildlife Coexistence Plan seem to be inconsistent.

RESPONSE: Per the response provided to Comment No. 5 above, the Buffer contains 420.45± acres of wetlands that will be preserved, enhanced, and restored.

- **181.05± acres of Indigenous Wetland Preservation and Enhancement.**
- **239.40± acres of Wetland Restoration.**

420.45± acres of Wetland Preservation, Enhancement, and Restoration.

Lee Plan Policy 47.2.5 states that "Hazardous wildlife attractants within 10,000 feet of a Port Authority airport's Air Operation Area (AOA) will be avoided by minimizing and correcting any wildlife hazards arising from wetlands or water bodies in accordance with FAA AC 150/5200-33B, or as otherwise amended. Site improvements on or near the Port Authority's airports must be designed to minimize attractiveness to wildlife of natural areas and manmade features such as detention/retention ponds, landscaping, and wetlands, which can provide wildlife with ideal locations for feeding, loafing, reproduction, and escape." Thus, Policy 47.2.5 is focused on compliance with the Federal Aviation Administration (FAA) Advisory Circular (AC) on hazardous wildlife attractants on or near airports. The following demonstrates how the project complies with the specific sections of the current FAA AC (150/5200-33C) with respect to minimizing wildlife attractants within the Buffer:

FAA AC 150/5200-33C

Section 2.3.2 – New Stormwater Management Facilities

This section of the AC states: "To facilitate the control of hazardous wildlife, the FAA recommends the use of steep-sided, rip-rap or concrete lined, narrow, linear-shaped water detention basins." In addition, this section states that "All vegetation in or around detention basins that provide food or cover for hazardous wildlife should be eliminated." Furthermore, this section of the AC recommends designing surface water management features "so as not to create above-ground standing water." The project has incorporated the following design modifications to address these issues: 1) Stormwater management lakes located within the Buffer will incorporate hardened shorelines (e.g., rip-rap) and/or steep slopes (i.e., 4:1); 2) stormwater lakes will be maintained in a manner that keeps them free of both emergent and submergent vegetation; and 3) the open water flow path previously proposed to connect the Six Mile Cypress and Estero drainage basins within the

project has been redesigned to be a closed system (i.e., piped with no open standing water). Therefore, the proposed design modifications are consistent with Section 2.3.2 of the AC.

Section 2.4.1 – Existing Wetlands on or near Airport Property

This section of the AC states: "At public-use airports, the FAA recommends immediately correcting, in cooperation with local, state, and Federal regulatory agencies, any wildlife hazards arising from existing wetlands located on or near airports within 5 miles of the aircraft operations area." Section 7.0 of the attached Protected Species and Human-Wildlife Coexistence Plan (PSHWCP) has been updated to include the following language consistent with Section 2.4.1 of the AC: If wildlife hazards are identified within the Project, the project team will coordinate with Lee County Port Authority (LCPA) Staff to immediately correct the issue(s). This may also involve coordination with local, state, and federal permitting agencies.

Section 2.4.3.2 – Off-Site Mitigation of Wetland Functions

This section of the AC states that "The FAA encourages landowners or communities supporting the restoration or enhancement of wetlands to do so only after critically analyzing how those activities would affect aviation safety. To do so, landowners or communities should contact the affected airport sponsor…" and "those parties should work cooperatively to develop restoration or enhancement plans that would not worsen existing wildlife hazards or create such hazards." Additionally, "if parties develop a mutually acceptable restoration or enhancement plan, the landowner or community proposing the restoration or enhancement must monitor the restored or enhanced site. This monitoring must verify that efforts have not worsened or created hazardous wildlife attraction or activity. If such attraction or activity occurs, the landowner or community should work with airport sponsor…to reduce the hazard to aviation."

The Applicant has had several meetings with LCPA Staff to thoroughly vet the conceptual site plan and discuss opportunities to minimize wildlife attractants within the site. Based on these meetings, the Applicant has incorporated multiple measures in the PSHWCP and Indigenous Preservation Restoration and Management Plan (IPRMP) to minimize wildlife attractants per LCPA recommendations. The minimization measures include:

1. **Stormwater lakes will incorporate a hardened shoreline (e.g., rip-rap) and/or steep slopes (i.e., 4:1) to minimize wading bird attractants.**
2. **Stormwater lakes will be maintained in a manner that keeps them free of both emergent and submergent vegetation such as pickerelweed (*Pontederia cordata*) and red ludwigia (*Ludwigia repens*).**
3. **No wetlands will be created within the Buffer.**
4. **Existing wetland and upland habitats will be managed such that they are restored, where applicable, in a "like-for-like" manner to maintain existing habitat types. For example, a melaleuca forest will be replaced with native trees and an exotic-infested**

marsh will be replanted with herbaceous vegetation.

5. **Plantings installed within the Buffer will adhere to the LCPA Compatible Native Plant List to reduce or eliminate plant material that would provide food, water, and shelter for large flocks of birds that could pose a high risk to aviation.**
6. **Hydrologic restoration will be focused on interconnecting wetland systems and is not anticipated to increase wetland hydroperiods within the site.**

In addition, Section 7.0 the attached PSHWCP includes a commitment to implement a wildlife monitoring program during construction and exotic removal activities. Numerous Best Management Practices (BMPs), as suggested by LCPA Staff, will be incorporated into the wildlife monitoring program to minimize wildlife attractants. A list of the BMPs is provided in Section 7.0 of the attached PSHWCP. Through multiple meetings and coordination efforts, the Applicant has demonstrated the willingness to work with LCPA Staff to develop management and monitoring plan strategies that best minimize wildlife attractants within the site. As such, the project is consistent with Section 2.4.3.2 of the AC.

As demonstrated above, the project is consistent with Sections 2.3.2, 2.4.1, and 2.4.3.2 of FAA AC 150/5200-33C; therefore, the project is consistent with Lee Plan Policy 47.2.5.

Section 12.1 of the attached PSHWCP has been revised to clarify that enhancement and restoration activities will adhere to the Hazardous Wildlife Protection Measures (Section 7.0) of the plan to minimize potential wildlife attractants.

7. The Indigenous Preservation, Restoration, and Management Plan states that extensive berm removal activities will restore hydrologic connectivity that historically existed among the onsite wetland communities. While the Protected Species Management and Human-Wildlife Coexistence Plan states that the hydrologic restoration proposed within the conservation areas will be focused on interconnecting wetland systems and is not anticipated to increase wetland hydroperiods. What engineering techniques will be implemented to ensure that the wetland hydroperiods within the 10,000' Hazardous Wildlife Buffer do not increase?

RESPONSE: As stated in Section 5.2 of the attached IPRMP, the proposed hydrologic restoration activities are designed to reconnect the Project's wetland systems and are not anticipated to increase wetland hydroperiods. Activities that could increase wetland hydroperiods, such as excavating/lowering the ground surface or creating impoundments, are not proposed as they could potentially attract hazardous wildlife. The main objective of the hydrologic restoration is to facilitate the north to south flow of water through the Project site that existed historically while maintaining existing wetland hydroperiods. It is anticipated that cypress and freshwater marsh systems will maintain long hydroperiods (approximately 180-270 days) while hydric pine and mixed wetland hardwood hammocks will maintain short hydroperiods (approximately 30-60 days), consistent with South Florida Water Management District habitat characterizations.

A flow path will be established in the central portion of the site which will facilitate a hydrologic connection between the Estero River and Six Mile Cypress sub-watersheds. Per coordination with LCPA Staff, the flow path was designed to be a closed (i.e., piped with no open standing water) system so it would not function as a wildlife attractant. The flow path will connect two short hydroperiod wetland habitat types (i.e., hydric pine and mixed wetland hardwoods); therefore, hydrologic connection between these systems is anticipated to occur only during peak wetland water levels or after large storm events. A cross-section showing how the flow path is intended to function is attached and provided as Appendix G in the attached IPRMP.

Additionally, the Drainage Report and model has been amended to include an analysis for shorter duration more frequent rainfall events. The South Florida Water Management District established a policy for analyzing potential wetland hydroperiod impacts with a rainfall event associated with a 2.33 year one day storm. A pre-vs-post comparison of the wetland areas for this rainfall event show 0.03 feet increase in peak stage in one wetland area and small decreases (0.03- 0.09 feet) in in peak stage of the other wetland areas for the 2.33-year storm event. These differences are negligible and within the modeling tolerances. Changes in hydroperiods would require increases in the depth of water in wetland areas by several inches.

8. Will the LCPA Landscape List be implemented for all development including single family homes, amenity center, common elements, etc within the 10,000' Hazardous Wildlife Buffer?

RESPONSE: The applicant has included Proposed Conditions with the concurrent Mixed Use Planned Development.

Proposed Condition #5 Development Order landscape plans must reflect 100% native vegetation for required buffers and landscaping. Any buffers within the 10,000 foot Hazardous Wildlife Buffer and not included in the IPRMP must be planted in compliance with the Lee County Port Authority "Recommended Compatible and Incompatible Native Landscape List." The planting requirements and plant list must be incorporated into project covenants and deed restrictions.

We believe that the responses above and attached materials provide the information necessary to appropriately respond to the comments provided. Should additional information be necessary to find the application sufficient, please do not hesitate to contact me at 850-354-7624 or email me at tekblad@stearnsweaver.com.

Daniels Parkway South
Comprehensive Plan Amendment
Project Narrative

June 10, 2022

The Property subject to the Comprehensive Plan Amendment is approximately 1,233 acres including STRAPS: 09-45-26-00-00003.0000, 08-45-26-00-00001.0030, 17-45-26-00-00001.0010, 16-45-26-00-00001.0000, 21-45-26-00-00001.0000, located at the southeast corner of Daniels Parkway and SR 82. The Property is in a unique location in the County between two arterial roadways, platted neighborhoods, and an International Airport. Due to the Property's size and configuration, part of the Property is within urban service boundaries for Lehigh Acres as well as Southeast Lee County.

Figure 1. Aerial of Subject Property

The Property is within the DR/GR, Wetlands and Central Urban future land use categories as well as the Southeast Lee County and Lehigh Acres Community Planning Areas, which govern future development of the Property. A Map Amendment is proposed for the portion of the Property located within the Central Urban FLU and Lehigh Acres Community Planning Area. A Text

Amendment with accompanying map amendments are proposed for the portion of the Property within the DR/GR and Wetlands FLU in the Southeast Lee County Community Planning Area.

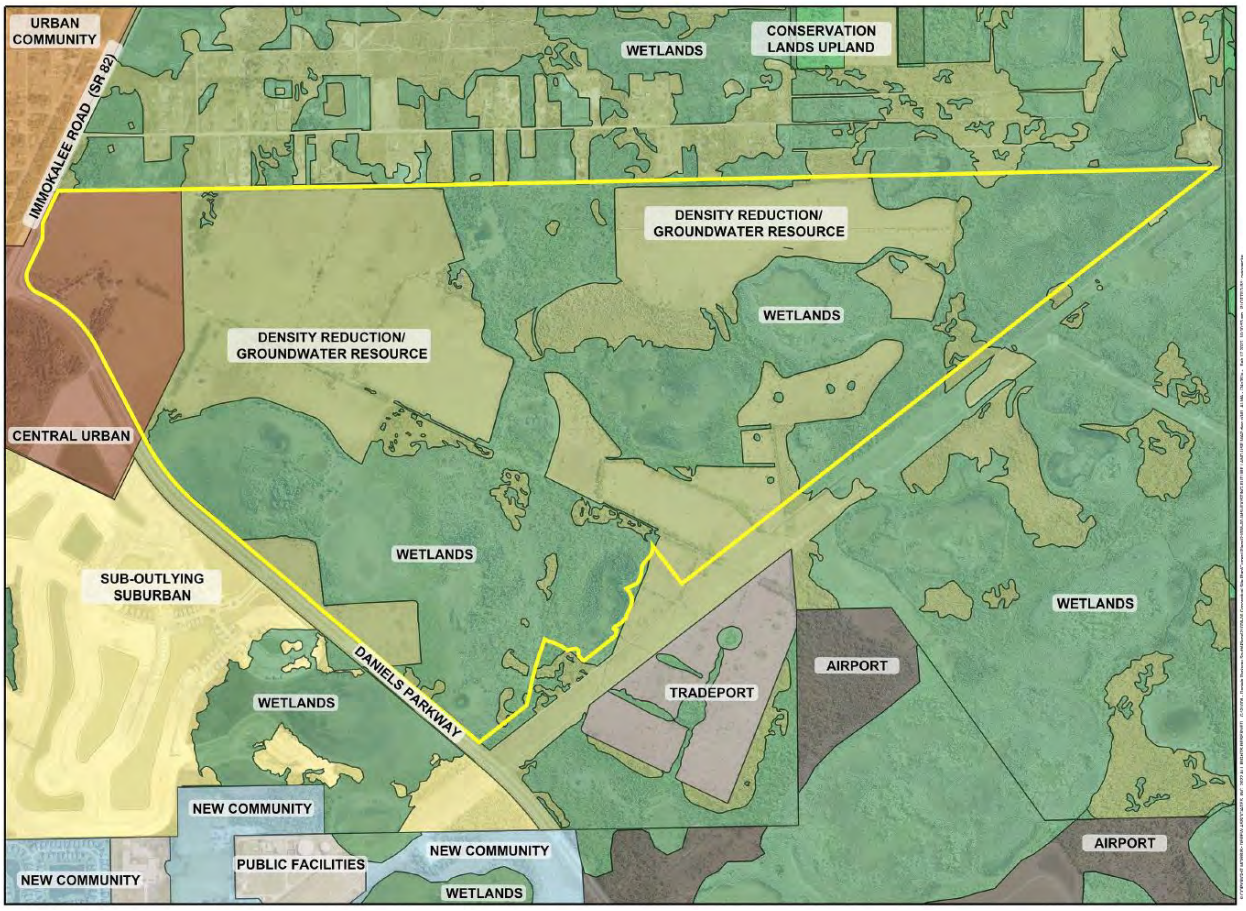

Figure 2. Existing Future Land Use

A formal determination of wetlands and other surface waters on-site was requested of the South Florida Water Management District (SFWMD) pursuant to Rule 62-330.201 Florida Administrative Code. A site visit and wetland limits were verified on January 14, 20 and 21, 2022 by the SFWMD and established 532.51 acres of wetlands and 30.93 acres of Other Surface Waters (OSW). The existing OSW on-site were agricultural ditches and remnants of prior military activity near the intersection of Daniels Parkway and SR 82. A copy of the determination is included in the supporting materials to the Map Amendment request.

As a result of the formal determination, the future land use categories of the subject property establish a maximum density of 933 dwelling units.

Future Land Use	Acreage	Density	Residential Units
DR/GR	616.05	1 DU/10 AC	61.60
Wetlands	532.51	1 DU/20 AC	26.62
Central Urban	84.52	10 DU/AC	845.2
Total Residential Units			**933.42**

Table 1. Existing Density Calculations

The development patterns that can be promoted by each future land use category are dramatically different. The Central Urban area, which is also within one of the mixed use overlays, can establish a clustered development pattern with higher densities and intensities served by central water and sewer. Only the Central Urban portion of the property is within the Lee County Utilities Future Service Area. Conversely, the DR/GR area can only establish 88.2 large lot single family development with well and septic. The pattern of development and use of 88 individual wells and septic systems conflicts with the desire to maintain the quality and quantity of surface and groundwater as envisioned by Lee Plan policy 1.4.5 for the Density Reduction/Groundwater Resource future land use. Additionally the property is within the Private Recreational Facilities Overlay. This Overlay is for properties that are located in areas characterized as "predominately impacted with agricultural, mining or other permitted uses, large lot single or limited ownership patterns and with direct access to existing roadways" in addition to being outside prioritized preservation areas. This Overlay precludes residential uses but permits ancillary commercial uses to a golf course, horse stable and camping facility. These uses also seem to conflict with the desire to maintain the quality and quantity of surface and groundwater as envisioned by Lee Plan policy 1.4.5.

As a result of these dramatically different development patterns for the subject property if developed independently, a map and text amendment with a concurrent planned development are proposed to establish a development strategy and design that promote a comprehensive master plan with unified commercial and residential development enhancing the vision and goals of each planning community, preserves and restores 676.10 acres of wetland and upland habitat (including 58 acres of Rare and Unique Uplands), establishes historic flow paths across the Property and promotes the responsible development of the Property in a manner that cannot be achieved under the existing Lee County requirements.

I. Introduction

The Southeast Lee Community Planning Area is often thought of as synonymous with the DR/GR Future Land Use Category. While this is not the case, the consideration of an enhancement overlay within this planning community has to start with an understanding of this FLU category and the existing land use characteristics of the Property.

The DR/GR is a future land use designation that was assigned to an area spanning approximately 82,560 acres in the southeast portion of Lee County and designated as the Southeast Lee Community Planning Area. The adoption of this land use category was the result of direction from the Department of Economic Opportunity (at the time, Department of Community Affairs) to direct growth to areas where development and infrastructure were already in place as well as to implement a strategy to protect shallow aquifers within this portion of Lee County. The DR/GR future land use category limits residential development to one (1) unit per 10 acres. The Wetlands future land use category, which permeates throughout the DR/GR, limits residential development to one (1) unit per 20 acres. The Southeast Lee County Community Planning Area is outlined in Goal 33 of the Lee Plan; which describes the importance of water resources and wildlife habitat and supports clustered and concentrated development patterns to incorporate protections for these resources into development designs.

Development within the DR/GR has largely occurred through three approaches:

1. Existing Acreage Subdivisions – Rural Subdivisions typically of 1 to 5 or more acre lots for residential and agricultural purposes. Development is supported by individual well and septic system.
2. Land Use Overlay – Several Overlays exist within the Southeast Lee Planning Area that seek to promote concentrated areas of development in a manner that improves and/or restores natural resources within the area.
3. Limerock Mining – Lands approved for mining historically or through the Mine Excavation. As mines have closed some have sought to be included in a land use overlay to promote redevelopment of the property in a manner that improved on-site natural resources.

Traditionally, central water and sewer service was not provided within the Southeast Lee County Planning Area promoting the use of potable well and septic. This seems to be in conflict with the DR/GR Future Land Use intent to maintain the quality and quantity of surface and groundwater as outlined by Policy 1.4.5.

Map 2-D Mixed Use Communities

As part of an evolving regulatory strategy for the Southeast Lee Community Planning Area, an amendment to the Lee Plan was adopted in 2010 that established Objectives 33.2 and 33.3 with their supporting polices and adopted Map 2-D identifying existing development types within the Southeast Lee Community Planning Area. An accompanying amendment was made to the Lee County Utilities Service Area to bring central utilities to specific locations. Map 2-D and Objective 33.3 identified existing residential areas and concentrated existing development rights on large tracts of land identified as Mixed Use Communities.

Since the initial implementation of the Mixed Use Communities, Map 2-D and associated utility service areas, have been amended with Objectives 33.2 and 33.3 and their supporting policies. Today there are 5 types of residential communities described in the Lee Plan and depicted on Map 2-D. Collectively, the strategies associated with these various communities have established a framework for development in the Southeast Lee Planning Community balancing residential and commercial development with environmental preservation. Some of this development within the Southeast Lee Community Planning Area is located along the Corkscrew Road corridor within the Environmental Enhancement Preservation Communities Overlay.

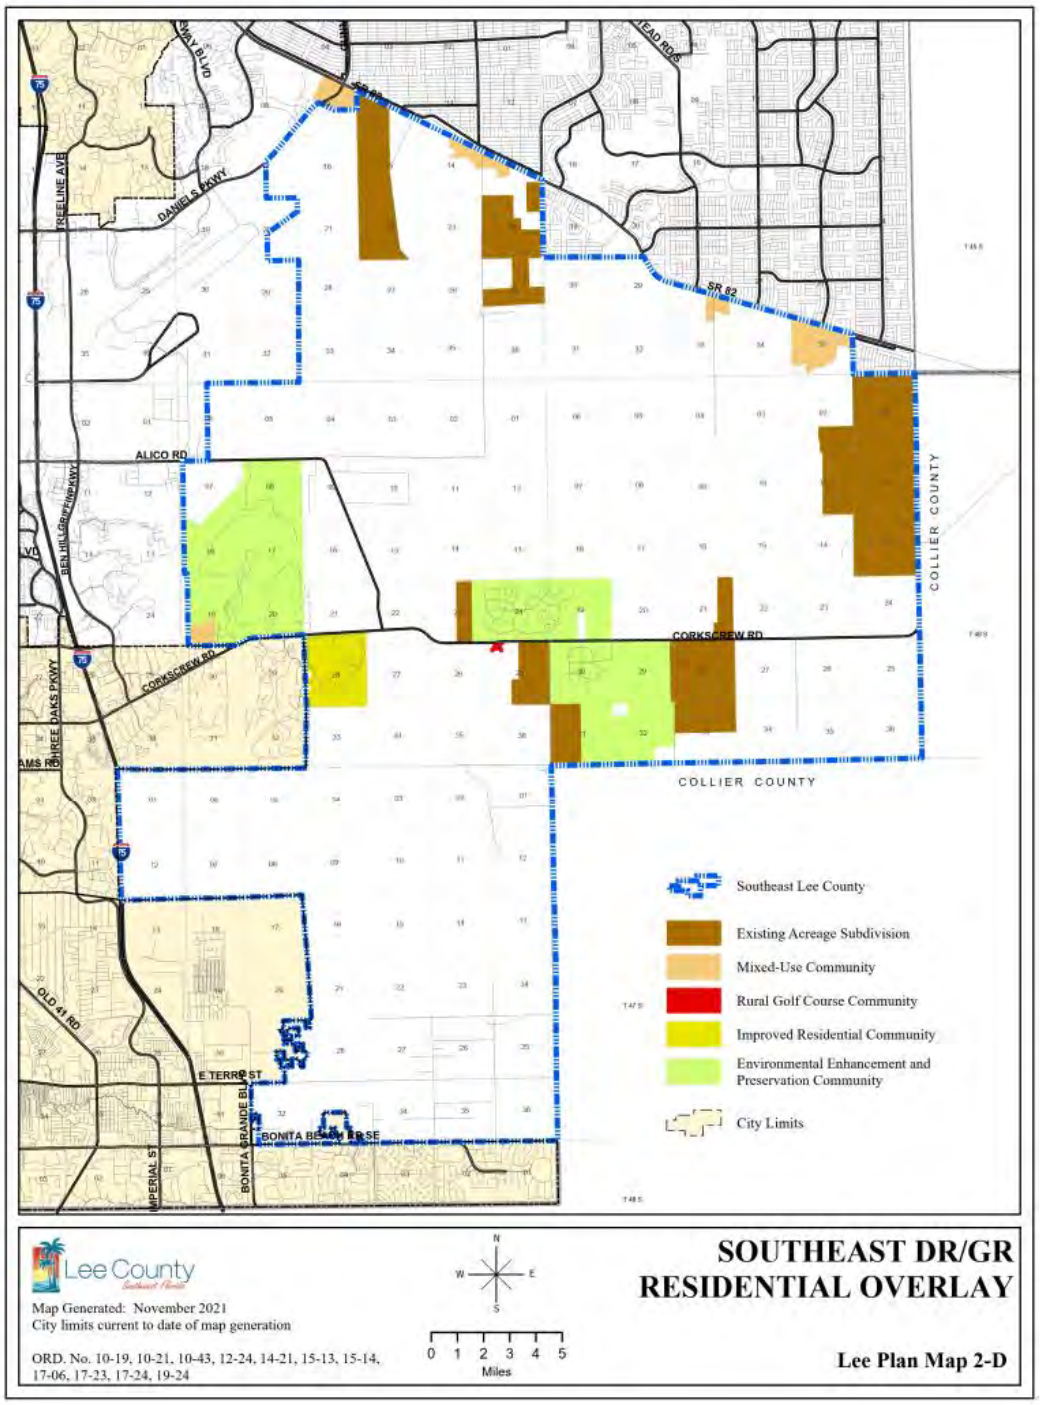

Figure 3. Map 2-D Southeast DR/GR Residential Overlay

Currently, there are six Mixed Use Communities established by Map 2-D - four are within Southeast Lee County and two are within Lehigh Acres. However, none of the Mixed Use Communities within Southeast Lee have developed as originally envisioned. The Mixed Use Community adjacent to WildBlue was excavated when the commercial uses were approved as part of the EEPCO to the east, supporting the project's MPD rezoning. The remaining three Mixed Use

Communities are located on properties currently utilized for agricultural activities and have not been rezoned to permit commercial or residential uses.

Of the two Mixed Use Communities in Lehigh Acres, one is zoned for 250,000 square feet of commercial uses, 150 hotel rooms and 50 multi-family units per Resolution Z-17-019. This community is immediately adjacent to a 1,315 unit residential subdivision known as Timber Creek. Unfortunately since the approval of the MPD in 2017, no development has occurred.

The remaining Mixed Use Community in Lehigh Acres is part of the subject property and is currently zoned AG-2. As part of the Lehigh Acres Planning Community this area is identified to be developed with a mix of two or more uses at the higher end of the density and intensity ranges to promote a sustainable urban development.

Proposed Mixed Use Enhancement Communities Overlay

The Lee Plan currently permits some additional development on contiguous property within 400 feet of the boundary of the Mixed Use Community for the Property. This limitation would impact existing on-site wetlands to cluster permitted development intensity within the existing 400 feet. Additionally, the existing policies do not prioritize the preservation and restoration of existing on-site native vegetative communities, including Rare and Unique Uplands, as well as the re-establishment of natural flow patterns and connection of watershed basins. The proposed Text Amendment seeks to establish a Mixed Use Enhancement Community Overlay to permit additional development beyond 400 ft of an existing Mixed Use Community provided a planned development is submitted demonstrating preservation and restoration of native vegetative communities, preservation and res-establishment of natural flow patterns, and the interconnection of watershed basins. As written, the concurrent review of an Overlay and Planned Development requests will ensure that the proposed development meets these objectives and is conditioned to appropriately address the natural resource priorities of the Southeast Lee Community Plan and Density Reduction Groundwater Resource future land use.

The joint map and text amendment applications together request the following:

1. Amend the Future Land Use Map 1-A for 84.5 acres of the subject property from Central Urban to Intensive Development.
2. Amend Map 1-F to eliminate the Private Recreation Facilities Overlay from the subject property.
3. Amend Maps 4-A and 4-B to extend Lee County Utilities Service Area over 1,148.5 acres of the subject property
4. Amend Map 2-D to include 1,148.5 acres of the subject property within the Mixed Use Community Enhancement Overlay.
5. Amend Policy 1.6.10, Objective 33.2 and Policy 33.2.2 to establish Mixed Use Communities Enhancement Overlay.
6. Amend Policy 1.5.10 to permit density to be summed across Non-Urban Future Land Use categories for properties within the Southeast Lee County Overlay (Map 2-D).
7. Propose new policy 33.2.X to establish the intent and characteristics of Mixed Use Communities Enhancement Overlay.

8. Amend Table 1(b) to reflect additional population within the Intensive Development FLU in the Gateway Planning Community.

II. Proposed Map Amendment

The northernmost 84.5 acres of the subject property are within the Central Urban FLU category and Lehigh Acres Planning Community. This portion of the property is also identified as being within the Lee County Utilities Future Water and Sewer Service Area on Maps 4-A and 4-B as well as a Mixed Use Community on Map 2-D. The current future land use would permit a possible density of 845 dwelling units and is expected to have intense commercial/light industrial development to promote a mix of uses.

A Map Amendment is proposed to place this portion of the property into the Intensive Development FLU Category.

> ***POLICY 1.1.2:*** *The Intensive Development future land use category is located along major arterial roads. By virtue of their location, the County's current development patterns, and the available and potential levels of public services, areas with this designation are suited to accommodate high densities and intensities. Mixed use developments of high-density residential, commercial, limited light industrial, and office uses are encouraged to be developed as described in Objective 11.1, where appropriate. The standard density range is from eight dwelling units per acre (8 du/acre) to fourteen dwelling units per acre (14 du/acre), with a maximum total density of twenty-two dwelling units per acre (22 du/acre). The maximum total density may be increased to thirty dwelling units per acre (30 du/acre) utilizing Greater Pine Island Transfer of Development Units.*

The Property is located adjacent to Immokalee Road (State Road 82) and Daniels Parkway, each classified as arterial roadways. Within the Intensive Development FLU, the Property would yield a maximum of 1,183 dwelling units. Due to the existing capacity of the adjacent roadways, the Property has the opportunity to provide multi-family residential development as desired by the Lehigh Acres Community Planning Area with commercial and light industrial uses that benefit the region as identified by Policy 1.1.2. A concurrent mixed-use planned development is proposed for the subject property which will establish 350,000 square feet of commercial uses and multi-family dwelling units within this portion of the property consistent with the Intensive Development FLU category described by Policy 1.1.2 and the Lehigh Acres Community Planning Area described by Goal 25.

To address the additional population that will be expected within the Intensive Development FLU, an amendment to Table 1(b) is proposed. The concurrent Master Concept Plan shows approximately 14 acres of multi-family development will occur within the Intensive Development FLU. This acreage is proposed to be added to Table 1(b) through a reduction of New Community and Central Urban. These reductions represent an accurate accounting of development that has occurred within the Planning Community due to the build out of the Gateway Community and Timber Creek and can be allocated toward the proposed project. A strikethrough/underline version of Table 1(b) is included in the supporting materials for review.

In addition to the requested Future Land Use Map amendment, other amendments to the Map Series are proposed to achieve consistency with the Text Amendment outlined below. The remaining 1,148.5 acres of the property will continue to be within the Density Reduction Groundwater Resource and Wetlands Future Land Use Categories. To promote a unified development pattern that protects groundwater resources, the following map amendments are also requested.

- Maps 4-A and 4-B: Lee County Utilities Service Area. Extend the service area to include the portion of the property within the DR/GR Future Land Use. Currently the 84.5 acres of the Property within the Central Urban FLU are within the LCU Service Area. The requested map amendment will permit the additional residential proposed by the FLU Map amendment and new policy 33.2.X to be served by central water and sewer service.
- Map 2-D: Southeast DR/GR Residential Overlay. Establish the Mixed Use Enhancement Communities Overlay and apply it to the portion of the property within the Southeast Lee Community Planning Area.
- Map 1-F: Private Recreational Facilities Overlay. Eliminate the Overlay from the portion of the property within the Southeast Lee Community Planning Area.

III. Proposed Text Amendment

A companion text amendment is proposed for the remaining 1,148.5 acres of the property under unified ownership to promote a more contiguous and compact pattern of development than might otherwise result from development without these amendments under the existing land use regulations. Policy 33.2.X of the Lee Plan is being proposed to establish an additional Overlay depicted on Map 2-D to allow for increased density within properties contiguous to and more than 400 feet from an existing Mixed Use Community.

The proposed text amendment includes the preservation and/or restoration of existing wetland and upland habitat to restore flow paths across the property where they previously existed. This proposal will support restoration of the property from two perspectives:

1. Removal of the north/south agricultural road will enable re-establishment of the interconnection of a historic flow pattern from west to east across the property.
2. Restoration of the existing wetlands and adjacent upland habitats will enable interconnection of the existing systems to further promote a historic flow pattern from north to south.

The subject property has been hydrologically divided into east and west sections due to an existing north/south internal farm road that supports the existing agricultural operations. As part of the management of surface water related to the existing and historical agricultural operations, an extensive network of ditches and berms have been constructed on the property leading to the portioning of the existing on-site wetlands. The historical path of surface water across the subject property is bifurcated by the north/south internal farm road and the internal agricultural berm and ditch system. This same internal farm road has been used by the SFWMD to represent the division between the Estero River and Six Mile Cypress watershed basins.

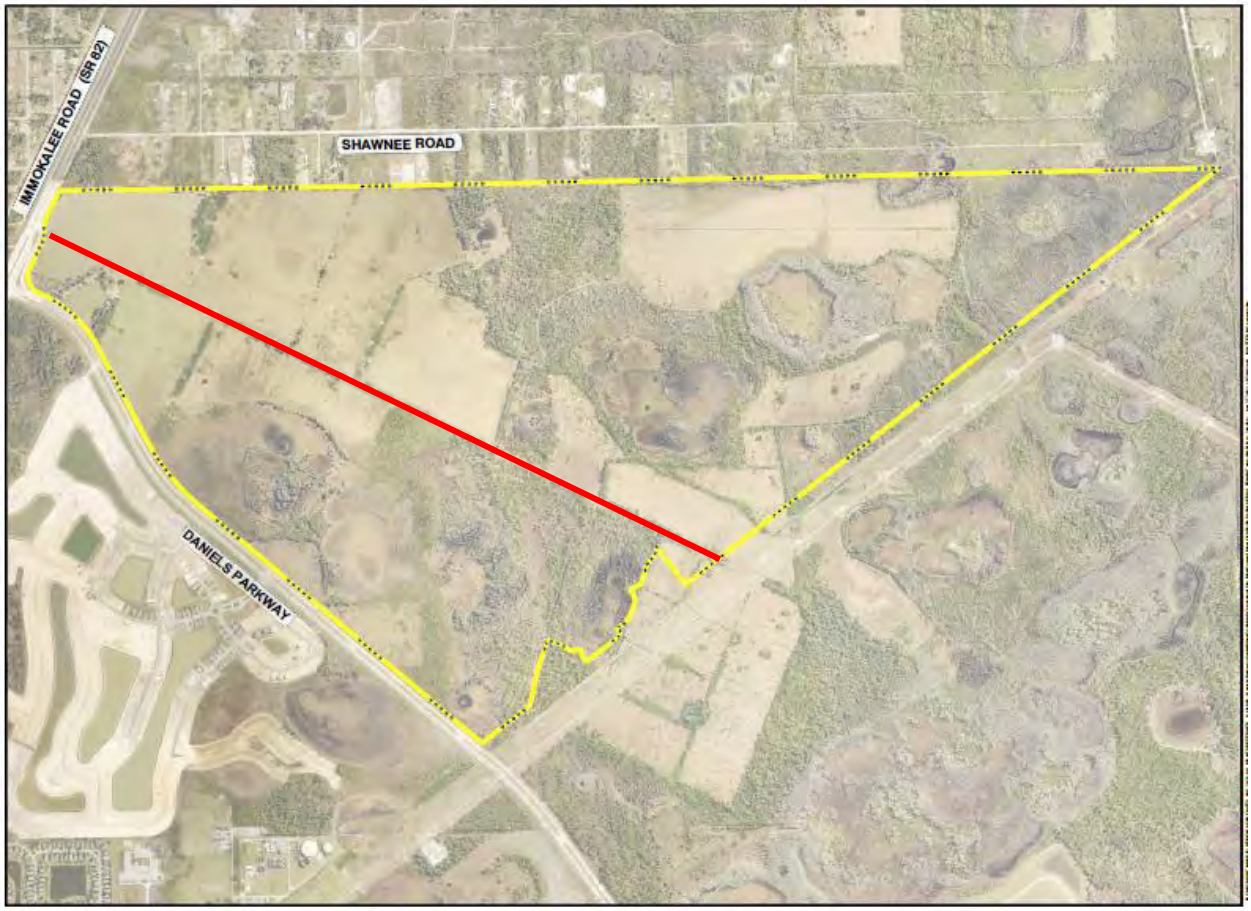

Figure 3. Subject Property with Agricultural Road Highlighted

In recognition of the competing concerns related to wildlife attractants and the proximity of the airport, the proposed restoration of the property does not include the creation of wetland habitats - only replacement of exotics with "like-for-like" native wetland vegetation to restore the areas that have been historically adversely impacted by the construction of berms, exotic infestation, and adjacent agricultural activities. The Master Concept Plan associated with the concurrent planned development application has been updated to reduce the development footprint proposed and attempt to limit the development area to the portions of the property impacted by the existing agricultural activity. As a result of the revised development layout the amount of Rare and Unique upland habitat restored on-site has increased in addition to the previous proposed wetland and upland restoration. Additionally, the Master Concept Plan demonstrates a connection across the existing basin boundary will be provided via a physical infrastructure improvement to the property reducing standing water on-site and wading bird foraging areas to promote increased compatibility with the Southwest Florida International Airport. These improvements promote the appropriate direction and path for surface water as demonstrated by historic mapping rather than continuing to rely on the existing agricultural berm and ditch systems internal to the property and wetland systems.

As a result of the improvements to the native vegetation, surface water connections, and groundwater recharge, the proposed text amendment includes a calculation of incentive density

based on the acreage of preserved and restored wetland and upland habitat. Many of the existing Overlays within the Southeast Lee Community Planning Area provide incentive density for preservation and restoration activities. The proposed text amendment seeks to only calculate density incentives from the 55% of the Property preserved and restored for native habitat.

The companion environmental reports prepared by Passarella and Associates demonstrate the following elements will occur on-site and qualify for incentive density.

- Preservation of 295.80 acres of indigenous wetlands and uplands
- Restoration of 359.60 acres of indigenous wetlands and uplands.
- Backfill 6.90 acres of other surface waters and replant with native vegetation
- Remove 16.8 acres of berms and replant with native vegetation.

The text amendment proposes to provide 1 incentive dwelling unit for each preserved and/or restored acre of wetlands and uplands. This is a reduction from the other existing overlays; which provide incentives based on the entire acreage of the concurrent planned development.

	Acres	**Density**	**Total Units**
Intensive Development	84.5	14 DU/AC	1,183
Preservation & Restoration	676.10	1 DU/AC	676
TOTAL RESIDENTIAL UNITS			**1,859**

Table 2. Proposed Density Calculations

The proposed site design implemented by the Master Concept Plan of the concurrent planned development demonstrates a clustered development pattern increasing the area of preservation and restoration proposed, including the amount of Rare and Unique Upland habitat preserved and restored on-site. As outlined by the Indigenous Preservation and Restoration Management Plan prepared by Passarella and Associates, the proposed development includes 676.10 acres of preservation and restoration. While the available maximum density is 1,859 dwelling units, the concurrent planned development limits the total maximum residential dwelling units to 1,600 dwelling units.

To aid in the evaluation of the proposed development, the text amendment requires the planned development submittal to include an indigenous preservation, restoration and management plan, enhancement lake management plan, plantings compatible with the Port Authority's planting list, and a management plan addressing wildlife on-site. Each of these plans and/or associated conditions are provided with the concurrent planned development application for review and evaluation. The enhanced lake management plan also includes an outline of the initial design methods to increase the shoreline slope of the proposed stormwater management lakes and deviations are requested to provide compatible plantings and/or hardened infrastructure along the shoreline consistent with the FAA vegetation and wildlife guidelines.

IV. Surrounding Properties

The Property is surrounded by a mix of uses in an area of Lee County that has significant residential and airport related development as well as vacant land and preservation areas.

Southwest

Immediately to the southwest of the subject property is a ±485-foot wide FPL easement on lands owned by the Jared Holes Trust which abut county-owned lands servicing Southwest Florida International Airport. The airport occupies a majority of land southeast of Daniels Parkway and the I-75 exchange. According to the Airport Layout Plan, the development of the airport will take place in two phases and is expected to extend into the year 2025. The Airport Layout Plan indicates that, at some point in the future, an expansion will occur for a second runway to be located south of the current runway. In addition, commercial, retail and industrial flex uses are proposed to be added to the airport in the future. Most of these services will be located along the northern boundary of the airport adjacent to Daniels Parkway, with a minor amount located adjacent to the Daniels Preserve center north of Daniels Parkway. As a result of the airport's proximity to the subject property, the existing 10,000' Hazardous Wildlife Buffer around the airport encumbers most of the subject property. Within this area only specifically approved species of vegetation may be utilized and water management lakes must be constructed to specific standards to discourage wildlife and reduce habitat in proximity to the airport.

Northwest

Immediately to the northwest is Daniels Parkway, a controlled access roadway from the segment commencing at US 41 and terminating at SR 82 per Resolution 16-04-08. This designation restricts the number and location of permanent access points along the roadway. The concurrent master concept plan accounts for this designation and aligns the proposed access points of the subject property with the approved access points as demonstrated in Resolution 16-04-08. Further northwest, across Daniels Parkway, is Timber Creek RPD and MPD which is currently under construction. Timber Creek was approved via Resolution #Z-17-019 for up to 1,315 dwelling units within the RPD portion, as well as 50 multi-family dwelling units, 250,000 square feet of commercial floor area, and 150 hotel rooms to be located within the MPD portion of the project.

North

The subject property is bounded to the north by SR 82, a 200-foot wide state-maintained arterial roadway. The SR 82 and Daniels Parkway intersection is the location of Florida's first Continuous Flow Interchange (CFI). Further north of SR 82, is the platted community of Lehigh Acres. A majority of the properties adjacent to SR 82 are zoned for commercial uses but have not been constructed. The remaining portion of Lehigh in this general vicinity is scattered residential development on the existing platted lots.

Text Amendment
Exhibit T4

June 10, 2022

POLICY 1.6.10: The Southeast Lee County Overlay (Map 2-D) is described in Objective 33.2. Thisese overlay affects only Southeast Lee County and identifies ~~five~~ six types of ~~land~~ communities:

1. "Existing Acreage Subdivisions:" Existing rural residential subdivisions that should be protected from adverse external impacts such as natural resource extraction.
2. "Rural Golf Course Communities:" Potential locations for the concentration of development rights on property zoned Private Recreational Facilities Planned Development and located in the Southeast Density Reduction/Groundwater Resource area.
3. "Mixed-Use Communities:" Locations where this concentration of development rights from large contiguous tracts with the Density Reduction/Groundwater Resource area that can be supplemented by transfer of development rights from non-contiguous tracts in the Southeast Density Reduction/Groundwater Resource area. See Objective 33.32 and following policies.
4. "Mixed Use Enhancement Communities:" Specific properties that preserve and restore natural resources, hydrological connections, and wildlife habitat and concentrate development rights on large tracts adjacent to existing future urban areas and Mixed Use Communities. See Objective 33.2 and following policies.

~~4~~5."Improved Residential Communities:" Property with existing residential approvals that are inconsistent with the Southeast Density Reduction/Groundwater Resource area that could be improved environmentally.

~~5~~6. "Environmental Enhancement and Preservation Communities:" Properties adjacent to Corkscrew and Alico Roads that have the potential to improve and restore important regional hydrological and wildlife connections.

POLICY 5.1.10: In those instances where contiguous land under single ownership is ~~divided~~ int~~o~~ two or more land use categories ~~by the adoption or revision of the Future Land Use Map~~, the allowable density under this Plan will be the sum of the allowable densities for each land use category for each portion of the land. This density can be allocated across the property provided that:

1. The planned development zoning is utilized; and

2. No density is allocated to lands designated as non-urban or Environmentally Critical that would cause the density to exceed that allowed on such areas unless those lands

are within a community described by the Southeast Lee County Overlay in Policy 1.6.10; and

~~3. The land was under single ownership at the time this policy was adopted and is contiguous; in situations where land under single ownership is divided by roadways, railroads, streams (including secondary riparian systems and streams but excluding primary riparian systems and major flow-ways such as the Caloosahatchee River and Six Mile Cypress Slough), or other similar barriers, the land will be deemed contiguous for purposes of this policy; and~~

34. The resultant planned development affords further protection to environmentally sensitive lands if they exist on the property. (Ord. No. 92-35, 00-22, 07-12)

Objective 33.2: RESIDENTIAL AND MIXED-USE DEVELOPMENT. Designate on a Future Land Use Map overlay areas that should be protected from adverse impacts of mining (Existing Acreage Subdivisions), specific locations for concentrating existing development rights on large tracts (Mixed-Use Communities), specific properties which provide opportunities to protect, preserve, and restore strategic regional hydrological and wildlife connections (Environmental Enhancement and Preservation Communities), specific properties that preserve and restore natural resources, hydrological connections and wildlife habitat and concentrate development rights on large tracts (Mixed Use Enhancement Community), and vacant properties with existing residential approvals that are inconsistent with the Density Reduction/Groundwater Resources future land use category (Improved Residential Communities).

POLICY 33.2.2: Map 2-D identifies future locations for Mixed-Use Communities where development rights can be concentrated from large Southeast Lee County tracts into Traditional Neighborhood Developments or other clustered development patterns. The preferred pattern for residential development is to cluster density within Mixed-Use Communities with access to ~~along~~ existing roads ~~and away from Future Limerock Mining areas~~.

1. Southeast Lee County Mixed-Use Communities must be concentrated from contiguous property owned under single ownership or control. Residential density is calculated from the upland and wetland acreage of the entire contiguous Southeast Lee County property. Increases in residential densities may be approved through:
    a. a planned development consistent with Policy 33.2.X.
    b. incentives as specified in the LDC for permanent protection of indigenous native uplands on the contiguous tract (up to one extra dwelling unit allowed for each five acres of preserved or restored indigenous native uplands) and
    c. through the acquisition of TDUs from TDR sending areas within Southeast Lee County as provided in Objective 33.3..
        i. The maximum gross density is 5 dwelling units per acre of total land designated as a Mixed Use Community when TDUs are used.
        ii. Properties that concentrate development rights and/or use TDUs created from Southeast Lee County within the Mixed-Use Communities identified on Map 2-D will be allowed to develop using permitted uses and the property development regulations for the C-2A zoning district.

2. Contiguous property under the same ownership may be developed as part of a Mixed-Use Community provided it does not extend more than 400 feet beyond the perimeter of the Mixed Use Community as designated on Map 2-D. In a Mixed Use Enhancement Community developed as a planned development consistent with Policy 33.2.X, all contiguous property under the same ownership and control at the time of application may be included.
3. Central water and wastewater services are required to develop a Mixed-Use Community.
4. Commercial uses developed as part of a Mixed-Use Community will be consistent with Policy 33.3.5 and will not exceed the allowable total square footage for commercial uses in Southeast Lee County.

[NEW] POLICY 33.2.X: Contiguous property under single ownership or control at the time of the planned development application may be developed as a Mixed Use Enhancement Community provided it is immediately adjacent to a Mixed Use Community on Map 2-D or to an Urban Future Land Use Category and proposes to preserve, and restore surface and groundwater resources and indigenous wildlife habitats on such contiguous property. As an incentive to cluster development and preserve and restore surface and groundwater resources along with wildlife habitat for state and federally listed species additional densities may be granted if:

1. A portion of the property is within the "Mixed Use Enhancement Community" as designated on Map 2-D of the Lee Plan and consistent with the criteria below:
   a) Located adjacent to a Mixed Use Community and Urban Future Land Use Category with direct access to an arterial road.
   b) Proposes to preserve and restore surface and groundwater resources and indigenous wildlife habitats; and
   c) Develops as a planned development.
2. The planned development requires the following:
   a. The Mixed Use Community and adjacent property under unified ownership or control are included in the planned development application.
   b. The Master Concept Plan must demonstrate:
      i. Clustered development pattern proximate to the Mixed Use Community and adjacent arterial roadways that maintains large contiguous tracts of open space and protects environmentally sensitive areas;
      ii. Preservation or restoration of existing wetland and upland habitat, including Rare and Unique Upland habitats, which will be used to:
         1. Restore hydrological connectivity or flow-ways where they are currently or previously existed;
         2. Sustain and help restore existing and historic groundwater levels; or
         3. Preserve, enhance and restore indigenous Rare and Unique upland habitats.
      iii. Indigenous Preservation Areas that:
         1. Are a minimum of 55% of the planned development.
         2. Have an Indigenous Preservation, Restoration and Management Plan addressing:
            a. Preliminary restoration plans, demonstrating minimum dimensions required for indigenous open space areas set forth in the LDC;
            b. Methods for exotic and nuisance plant removal;

c. Wetland hydrological reconnections;
d. Lands identified for the restoration/creation of Rare and Unique Upland habitat containing the soil(s) needed to support the establishment and success of the indigenous Rare and Unique upland habitats;
e. Replanting plans;
f. Management plans with success criteria, monitoring, and maintenance for 5 consecutive years; and
g. Protected species, Airport Wildlife Management, and human-wildlife coexistence plans.

3. Will be platted in separate tracts and dedicated to an appropriate maintenance entity. Prior to the Certificate of Compliance (CC) for the first development order, a Community Development District or master property owners association must be created and accept responsibility for perpetually maintaining preservation areas larger than 300 acres.
4. Will be placed under Conservation Easement dedicated to a maintenance entity that provides Lee County (or other public agency) with third party enforcement rights. Conservation easements must be recorded within 5 years of first development order approval.

c. An enhanced lake management plan including:
   i. Best management practices for fertilizers and pesticides;
   ii. Erosion control and bank stabilization practices; and
   iii. Lake maintenance requirements.
d. A water quality monitoring plan demonstrating that stormwater leaving the development meets state and federal water quality standards.
e. Agricultural irrigation and use of fertilizers (or other agricultural chemicals) for agricultural purposes must cease at the time of first development order approvals.
f. Protection of public wells by demonstrating compliance with the Wellfield Protection Ordinance.
g. Florida Friendly Plantings and/or Lee County Port Authority (LCPA) Compatible Plantings with low irrigation requirements in common elements will be encouraged.
h. Written verification of adequate public services for the planned development from the sheriff, EMS, fire district and Lee County School District.

3. As a result of supporting a Mixed Use Enhancement Community, the recreation of historic flow paths, preservation of natural habitat, and restoration or creation of Rare and Unique Uplands, additional incentive density equal to one (1) dwelling unit per acre of preserved or restored wetland or upland habitat may be approved through planned developments meeting the criteria above.
   a. Additional incentive density will be based upon the acreage of preserved or restored wetland or upland habitat (i.e. all areas within the boundary of the planned development whether uplands or wetlands).
   b. Density from the contiguous Mixed Use Community and Urban Future Land Use Category may be transferred into the area of the Mixed Use Enhancement Community.

Daniels Parkway South
Comprehensive Plan Amendments
Lee Plan Consistency
September 9, 2022

The Daniels Parkway South property, in its entirety, is approximately ±1,233 acres, located near the intersection of SR 82 and Daniels Parkway. 1,148 acres are in the Southeast Lee County community planning area and 84.5 are in the Lehigh Acres community planning area. The property is comprised of three different Future Land Use Categories: Density Reduction/Groundwater Resource, Wetland, and Central Urban. The development patterns that can be promoted by each future land use category are dramatically different. The Central Urban area, which is also within one of the mixed use overlays, can establish a clustered development pattern with higher densities and intensities served by central water and sewer. Only the Central Urban portion of the property is within the Lee County Utilities Future Service Area. Conversely, the DR/GR area can only establish a large lot single family development with well and septic. The pattern of development and use of well and septic conflict with the desire to maintain the quality and quantity of surface and groundwater as envisioned by Lee Plan Policy 1.4.5.

As a result of these dramatically different possibilities for the subject properties if developed independently, a map and text amendment with concurrent planned development are proposed to establish a development strategy and design that promote a comprehensive master plan with unified commercial and residential development that enhances the vision and goals of each community plan, promoting responsible development that could not be achieved under the existing Lee County requirements.

Future Land Use Map Amendment

As part of the requested amendments, the Future Land Use (FLU) category of the 84.5 acre Central Urban portion of the property is proposed to be placed into the Intensive Development FLU.

> ***POLICY 1.1.2:*** *The Intensive Development future land use category is located along major arterial roads. By virtue of their location, the county's current development patterns, and the available and potential levels of public services, areas within this designation are suited to accommodate high densities and intensities. Mixed use developments of high-density residential, commercial, limited light industrial, and office uses are encouraged to be developed as described in Objective 11.1, where appropriate. The standard density range is from eight dwelling units per acre (8 du/acre) to fourteen dwelling units per acre (14 du/acre) with a maximum total density of twenty-two dwelling units per acre (22 du/acre). The maximum total density may be increased to thirty dwelling units per acre (30 du/acre) utilizing Greater Pine Island Transfer of Development Units.*

The Intensive Development FLU portion of the site is within the Lehigh Acres Community Plan area and located adjacent to two arterial roadways that serve as major travel corridors in the County. Daniels Parkway and SR 82 have arterial roadway functional classifications per the Lee County Road Maintenance System and provide access to other major commercial areas and employment centers in greater Lee

County. Daniels Parkway is a major north-south connector for the residents of Lehigh Acres. North of SR 82, Daniels Parkway becomes Gunnery Road, another major arterial in the Lehigh Acres Community. There are limited east-west connectors between Lehigh Acres and other areas in the County where major employers are located.

Lehigh Acres, the largest community planning area in the County, is a 96 square mile historically platted subdivision of mostly quarter- and half-acre residential lots. As a result of this development pattern and its location in east Lee County it serves as a "bedroom" community. Over time, Lee County has engaged in efforts to incentivize commercial and industrial development in central portions of the Lehigh Acres. As a result, community planning efforts have focused on creating mixed use nodes within the community to promote additional areas for commercial and employment services, but with only varying success. Currently, most commercial needs are met through existing commercial development along Lee Boulevard and the previously described commercial just south of the intersection of Lee Boulevard and Homestead Road. Another planning effort to promote additional commercial and employment areas is visibly demonstrated by the Future Land Use Map, where central portions of the community are within the Central Urban FLU and only a small quadrant of Intensive Development exists at the center of Lehigh Acres for an existing commercial plaza.

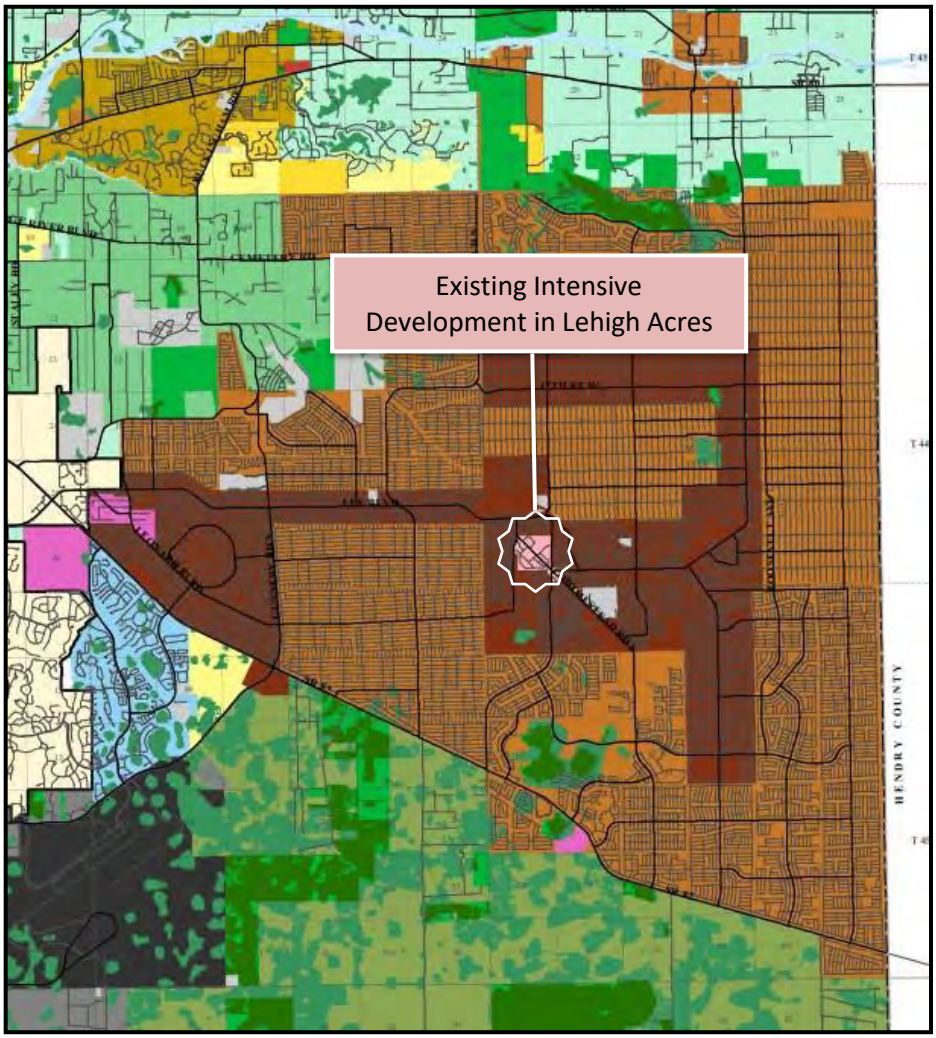

Figure 1. Lehigh Acres Intensive Development FLU

Lee County's recent 2045 Growth Management Update confirms that "the county's future urban areas will be essentially built out by 2045 and to accommodate the population growth an interest in the redevelopment of these areas will continue." This summary is indicative of the area surrounding the existing Intensive Development FLU, which is mostly built out and would require redevelopment to capitalize on the incentives of the underlying future land use. However, due to multiple parcels under separate ownership it is unlikely that redevelopment will occur in the near future. As currently designed and developed, this 162-acre Intensive Development area includes G. Weaver Hipps Elementary School, two commercial plazas, a post office, as well as an assortment of other commercial goods and services. Given the expansive size of Lehigh Acres, this area does not have the mix nor intensity of use to encourage or allow an impactful internal capture within the community plan area.

The requested map amendment to Intensive Development and companion planned development would establish a second significant commercial node with a broad mix of uses that would increase opportunities for services in closer proximity to residents in eastern Lee County.

Text Amendment & Supporting Map Amendments

The remaining 1,148 acres of the subject property is within the DR/GR and Wetlands Future Land Use Category and Southeast Lee Planning Community. The DR/GR is a future land use designation that was assigned to an area spanning approximately 82,560 acres in the southeast portion of Lee County and designated as the Southeast Lee Community Planning Area. The adoption of this land use category was the result of direction from the Department of Economic Opportunity (at the time, Department of Community Affairs) to direct growth to areas where development and infrastructure were already in place as well as to implement a strategy to protect shallow aquifers within this portion of Lee County. The DR/GR future land use category limits residential development to one (1) unit per 10 acres. The Wetlands future land use category, which permeates throughout the DR/GR, limits residential development to one (1) unit per 20 acres.

As part of an evolving regulatory strategy for the Southeast Lee Planning Community, an amendment to the Lee Plan was adopted in 2010 and established Objectives 33.2 and 33.3 with their supporting polices and adopted Map 2-D identifying existing development types within the Southeast Lee Planning Community. Map 2-D and Objective 33.3 identified existing residential areas and concentrated existing development rights on large tracts of land identified as Mixed Use Communities.

Due to the subject property's size and complex land use characteristics, the joint map and text amendment applications together establish the Mixed Use Enhancement Communities Overlay to request the following:

1. Amend Objective 33.2 and Policy 33.2.2 to establish Mixed Use Communities Enhancement Overlay.
2. Propose new Policy 33.2.X to establish the intent and characteristics of Mixed Use Communities Enhancement Overlay.
3. Amend Map 2-D to include 1,148.5 acres of the subject property within the Mixed Use Community Enhancement Overlay.
4. Amend Map 1-F to eliminate the Private Recreation Facilities Overlay from the subject property.

5. Amend Maps 4-A and 4-B to extend Lee County Utilities Service Area over 1,148.5 acres of the subject property
6. Amend Table 1(b) to reflect additional population within the Intensive Development FLU in the Gateway Planning Community.

These proposed amendments will occur at the same time as the amendment to the Future Land Use Map for the 84.5 acres of the Property to be placed in the Intensive Development FLU Category. Together, these amendments will increase the development opportunity on the Central Urban 84.5 acres of the subject property at the SR 82/Daniels Parkway node while leaving 1,148.5 acres within the DR/GR and Wetlands Future Land Use categories. They also establish an Overlay to promote a cohesive development plan for the entire property that enhances the intent and vision of both the Lehigh Acres and Southeast Lee community plans. As written, the Overlay also provides the opportunity to evaluate properties individually for redevelopment to determine, as part of a concurrent planned development, whether the required prerequisites and the proposed development conditions have been met.

POLICY 1.4.5: *The Density Reduction/Groundwater Resource (DR/GR) future land use category includes upland areas that provide substantial recharge to aquifers most suitable for future wellfield development. These areas also are the most favorable locations for physical withdrawal of water from those aquifers. Only minimal public facilities exist or are programmed.*

1. *New land uses in these areas that require rezoning or development order must demonstrate compatibility with maintaining surface and groundwater levels at their historic levels utilizing hydrologic modeling, the incorporation of increased storage capacity, and inclusion of green infrastructure. The modeling must also show that no adverse impacts will result to properties located upstream, downstream, as well as adjacent to the site. Offsite mitigation may be utilized, and may be required, to demonstrate this compatibility. Evidence as to historic levels must be submitted as part of the rezoning application and updated, if necessary as part of the mining development order application.*

2. *Permitted land uses include agriculture, natural resource extraction and related facilities, conservation uses, public and private recreation facilities, and residential uses at a maximum standard density of one dwelling unit per ten acers (1 du/10 acres). See Objectives 33.2 and 33.3 for potential density adjustments resulting from concentration or transfer of development rights.*

3. *Private Recreational Facilities may be permitted in accordance with the site location requirements and design standards, as further defined in Goal 13. No Private Recreational Facilities may occur within the DR/GR land use category without a rezoning to an appropriate planned development category, and compliance with the Private Recreation Facilities performance standards, contained in Goal 13.*

POLICY 1.5.1: *Permitted land uses in Wetlands consist of very low density residential uses and recreational uses that will not adversely affect the ecological functions of wetlands. All development in Wetlands must be consistent with Goal 124. The maximum density is one dwelling unit per twenty acres (1 du/20 acres) except as otherwise provided in Table 1(a) and Chapter XII.*

The proposed amendments will retain these future land use categories for the subject property and utilize an overlay to establish a cohesive development pattern. Consistent with the approved use for the DR/GR future land use category, the proposed planned development demonstrates that only residential units and supporting amenities are proposed outside the Intensive Development FLU. Lee County Utilities has already established the appropriate location for physical withdrawal of water as identified on Lee Plan Map 4-C. The wells providing potable water to Lee County are clustered to the southeast almost 4 miles from the subject property and approximately 4.5 miles northeast from the intersection of SR 82 and Daniels Parkway. The subject property is well outside of the travel zones for these established public water wells.

As further support for the proposed plan amendments, a Drainage Report prepared by Morris-Depew Associates, the Integrated Model Analysis of Daniels South and the Characterization of Ground and Surface Water Resources Reports prepared by Progressive Water Resources are provided as part of the supporting material to the Comprehensive Plan Amendment applications. Combined, the reports clearly demonstrate that the elimination of the existing cattle operation, removal of historic agricultural ditches and berms, and proposed improvements associated with the development of the property will have a positive net hydrological benefit to the DR/GR. The proposed development pattern, outlined by the Master Concept Plan of the concurrent planned development, demonstrates some impacts to the ±532.51 acres of wetlands on-site, so a Jurisdictional Determination has been secured from the South Florida Water Management District memorializing the location of the on-site wetlands and is included in the supporting application materials.

Growth Management

The proposed amendments promote a contiguous and compact growth pattern consistent with the existing residential neighborhoods in the surrounding area, including Lehigh Acres, Timber Creek and the Gateway DRI Communities as desired by Objective 2.1 and 2.2.

> ***GOAL 2: GROWTH MANAGEMENT.*** *To provide for an economically feasible plan which coordinates the location and timing of new development with the provision of infrastructure by government agencies, private utilities, and other sources.*
>
> ***OBJECTIVE 2.1: DEVELOPMENT LOCATION.*** *Contiguous and compact growth patterns will be promoted through the rezoning process to contain urban sprawl, minimize energy costs, conserve land, water, and natural resources, minimize the cost of services, and prevent development patterns where large tracts of land are by-passed in favor of development more distant from services and existing communities.*
>
> ***OBJECTIVE 2.2: DEVELOPMENT TIMING.*** *Direct new growth to those portions of the future urban areas where adequate public facilities exist or are assured and where compact and contiguous development patterns can be created. Development orders and permits (as defined in Section 163.3164(7), F.S.) will be granted only when consistent with the provisions of Sections 163.3202(2)(g) and 163.3180, F.S. and the concurrency requirements in the Land Development Code.*

The property is located along a unique stretch of Daniels Parkway – the *only* property abutting Daniels Parkway with a Non-Urban Future Land Use. As further demonstrated in Figure 2, all other properties

abutting Daniels Parkway are within Future Urban Land Use Categories. The request utilizes the map and text amendments to establish a density (1.3 DU/AC) which is less than the existing surrounding residential developments and provides a transition between these communities and the 2 to 5 acre residential lots to the east and undeveloped lands to the south.

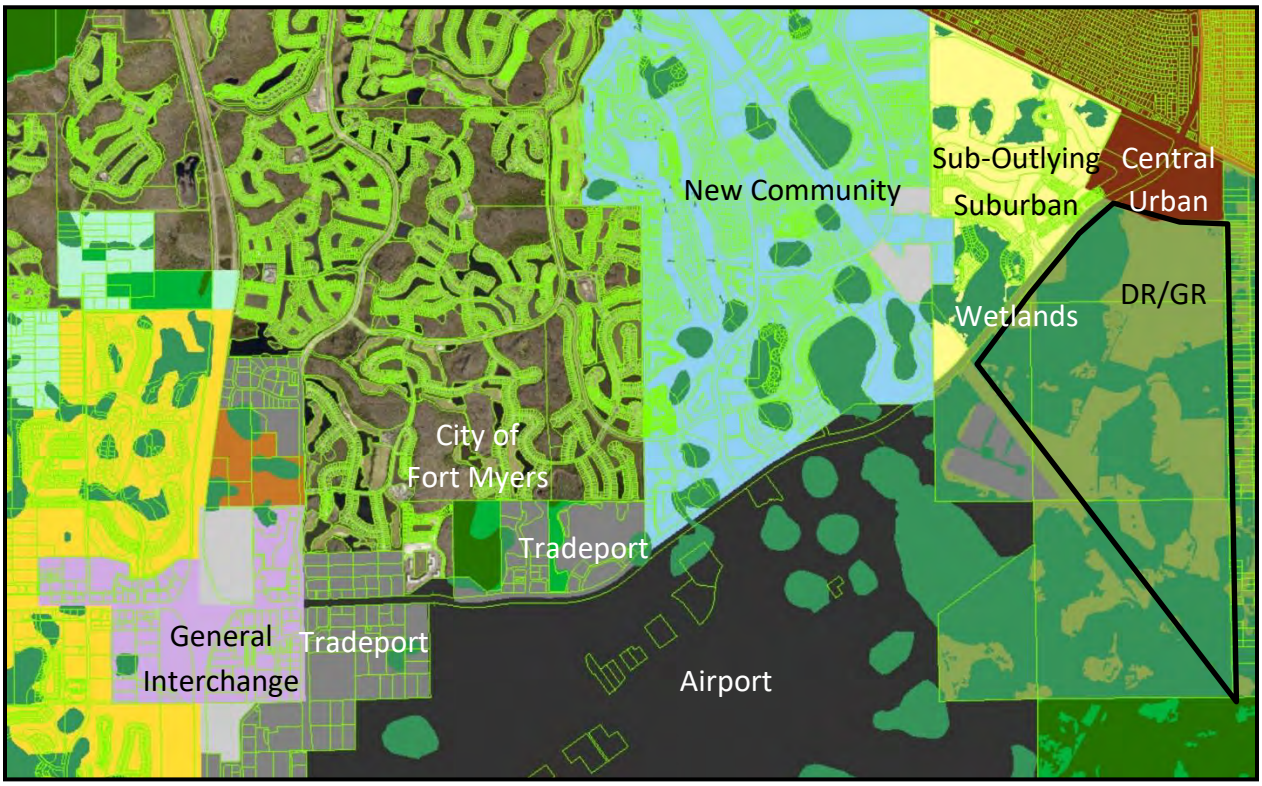

Figure 2. Current FLU Categories Adjacent to Daniels Parkway

Utilizing the proposed text amendment to establish a master planned mixed use enhancement community, the concurrent planned development will cluster the residential density on-site in a pattern that is consistent with the other properties within Urban FLU categories along Daniels Parkway. Additionally, the subject property is within an area of existing urban services as demonstrated by the provided letters of availability, and a map amendment is proposed to include the entire property within the service area for Lee County Utilities to provide central water and sewer service to the proposed development consistent with Standards 4.1.1 and 4.1.2 for potable water and sanitary sewer. Reclaimed water is not currently available in the vicinity, per the Ground and Surface Water report prepared by Progressive Water Resources. Should reclaimed water become available, infrastructure can be extended consistent with Policy 57.1.5. This requested service area expansion will eliminate individual potable water wells and septic systems from being developed on-site and will promote the intent of the DR/GR future land use to protect groundwater resources.

> ***POLICY 2.3.1***: *All proposed changes to the Future Land Use Map in critical areas for future potable water supply (Lehigh Acres as described in Policy 54.1.9; and all land in the Density Reduction/Groundwater Resource land use category) will be subject to a special review by the staff of Lee County. This review will analyze the proposed land uses to determine the short-term and long-term availability of irrigation and domestic water sources, and will assess whether the*

proposed land uses would cause any significant impact on present and future water resources. If the Board of County Commissioners wishes to approve any such changes to the Future Land Use Map, it must make a formal finding that no significant impacts on present or future water resources will result from the change.

POLICY 2.3.2: *Future Land Use Map amendments to the existing DR/GR areas south of SR 82 east of I-75, excluding areas designated by the Port Authority as needed for airport expansion, which increase the current allowable density or intensity of land use will be discouraged by the county. It is Lee County's policy not to approve further urban designations there for the same reasons that supported its 1990 decision to establish this category. In addition to satisfying the requirements in 163 Part II Fla Stat., the Strategic Regional Policy Plan, the State Comprehensive Plan, and all of the criteria in the Lee Plan, applicants seeking such an amendment must:*

1. *analyze the proposed allowable land uses to determine the availability of irrigation and domestic water sources; and,*
2. *identify potential irrigation and domestic water sources, consistent with the Regional Water Supply Plan. Since regional water suppliers cannot obtain permits consistent with the planning time frame of the Lee Plan, water sources do not have to be currently permitted and available, but they must be reasonably capable of being permitted; and,*
3. *present data and analysis that the proposed land uses will not cause any significant harm to present and future public water resources; and,*
4. *supply data and analysis specifically addressing the urban sprawl.*

During the transmittal and adoption process, the Board of County Commissioners must review the application for these analytical requirements and make a finding that the amendment complies with all of them.

The requested amendments do not remove the subject property from the DR/GR FLU which is a category that has been designated "critical for future potable water supply." The subject property is on the northwestern edge of the DR/GR and does not exhibit all of the general characteristics present in the balance of the DR/GR. The property has been disturbed since the late 1940s and continues to be disturbed with agricultural activities, ditches, berms and other alterations that direct and control surface water flow. The subject property has been hydrologically divided into east and west sections due to an existing north/south internal farm road that supports the existing agricultural operations. Additionally, the existing wetlands on-site have been internally bermed, creating artificial partitions and disconnecting sections within the natural system.

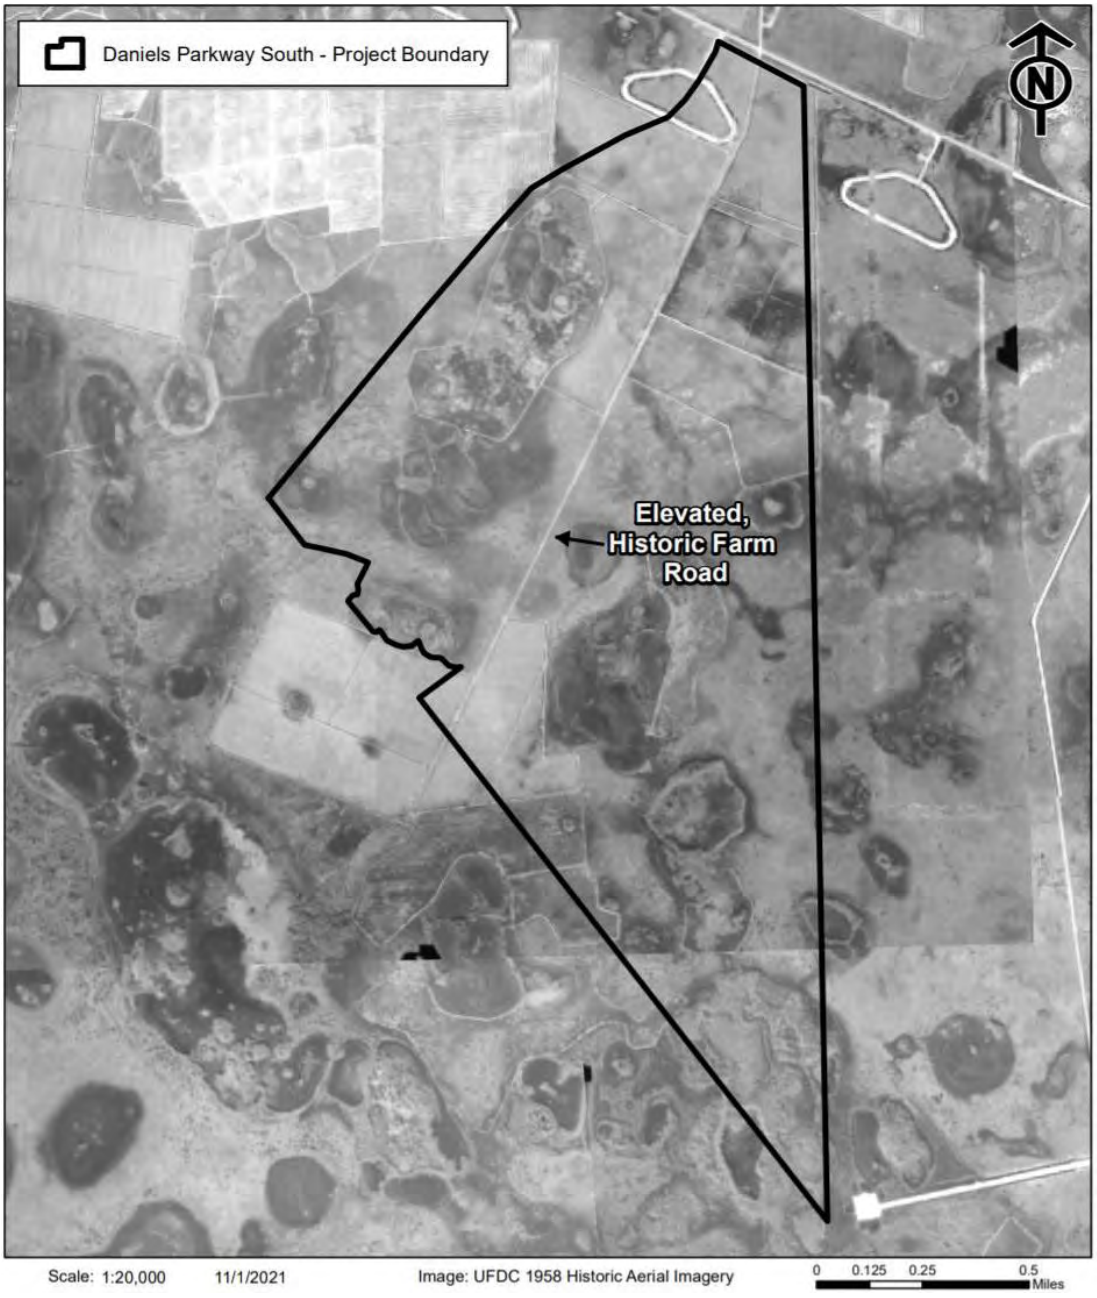

Figure 3. 1958 Aerial of Subject Property with Historic Farm Road

As described in the Characterization of Ground and Surface Water Resources report prepared by Progressive Water Resources, the existing agricultural surface water management system with an extensive network of ditches and berms promotes drainage for the agricultural operations, reducing water table elevations, and subsequently lowering recharge potential. These same features can also negatively impact nearby wetlands, promote growth of exotic and nuisance species, and further negatively impact water resources within the greater DR/GR.

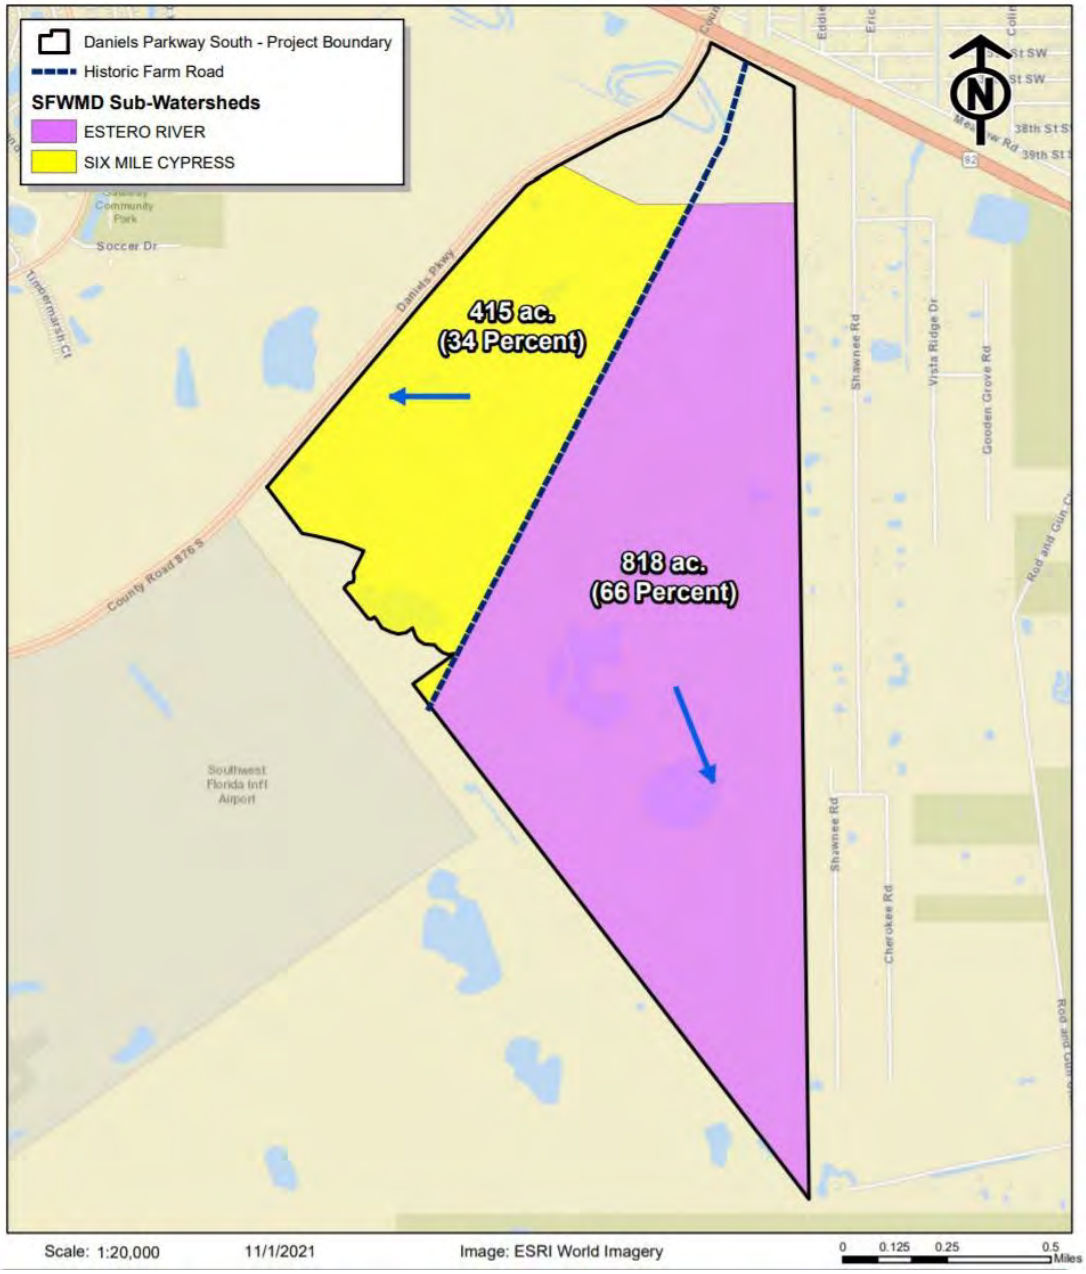

Figure 4. Basin Divide and Subject Property Boundary

The Environmental Assessment provided by Passarella and Associates identifies that the predominate land cover on the property is improved with low pasture areas which occupy 501.4 acres of 40.7% of the subject property. Ditches, berms, and other disturbed lands are 94.29 acres or 7.6% of the property. As a result of these impacts to the natural habitat onsite, the proposed amendments seek to preserve and restore existing wetland and upland habitats to restore flow patterns across the basin divide to generally where they previously existed on-site consistent with Standard 4.1.4.

STANDARD 4.1.4: ENVIRONMENTAL FACTORS

1. *In any case where there exists or there is the probability of environmentally sensitive areas (as identified by Lee County, the Corps of Engineers, Department of Environmental Protection, South Florida Water Management District, or other applicable regulatory agency), the developer/applicant must prepare an environmental assessment that examines the existing conditions, addresses existing or anticipated environmental problems, and proposes means and mechanisms to protect, conserve, or preserve the environmental and natural resources.*
2. *Ensure that land uses and structures are well integrated, properly oriented, and functionally related to the topographic and natural features of the site.*
3. *Ensure development minimizes the need for expansion and construction of street and utility improvements.*

It is important to note that the proposal **will not create** any wetland habitat due to the property's proximity to the Southwest Florida International Airport (SWFIA) and concerns related to wildlife attraction. The 679.10 acres of preservation and restoration proposed includes approximately 295.8 acres of existing indigenous upland and wetland habitat, 383.3 acres of restored upland and wetland habitat and 23.7 acres of backfilling and grading of existing berms and ditches to replant with native vegetation. Approximately 58.1 acres of mature pine flatwoods; which is considered a Rare and Unique upland habitat type are proposed as indigenous upland preservation. The creation of additional wetlands cannot occur on the property due to the proximity to the SWFIA and concerns regarding wildlife attractants. The proposed restoration is predicated upon like-for-like habitat restoration and plantings that are consistent with the Lee County Port Authority's (LCPA) Compatible Native Landscape List. The on-site inspections conducted by Passarella and Associates have identified the types of wetland and upland habitat located on-site. As an examples, areas identified as melaleuca forest to be restored will be replanted with herbaceous vegetation. This will ensure that the restoration activities maintain the overall acreage of wetland and upland habitat on-site but also promote the removal of exotic vegetation and establishment of indigenous plantings. This practice promotes compatibility with the Southwest Florida International Airport and consistency with the regulatory practices of LCPA. Specifics of the proposed restoration are provided in Section 5.0 of the Indigenous Vegetation Preservation Restoration and Management Plan (IPRMP) prepared by Passarella and Associates.

The IPRMP also demonstrates the existing two watershed basins on-site do not currently interconnect via wetland habitat types. As a result, the provided Drainage Report by Morris-Depew Associates and concurrent Master Concept Plan, propose physical infrastructure improvements to the site to interconnect the two watershed basins during periods of high rainfall. While not a natural flowway, the proposed improvements take into account the unique conditions of the property to achieve the overall objective of interconnecting wetlands and re-establishing historic flow patterns across the property as compared to existing conditions consistent with the DR/GR Future Land Use. Historically, under natural ground conditions, surface water would have had the ability to flow across the Property's land features thereby connecting the 2 on-site watersheds during larger rainfall events. The man-made hydraulic improvement will implement this natural connection by providing the opportunity for surface water to flow across the basin divide during high run off rainfall events. The control structure for the man-made hydraulic improvement is set at an elevation that is above the wet season water table ensuring wetland surface elevations do not decrease from existing conditions.

Some impacts are proposed to the existing on-site wetlands as demonstrated by the concurrent Master Concept Plan; however a Jurisdictional Determination has been secured from the South Florida Water Management District to address these impacts.

Mixed Use Development

A concurrent mixed use planned development has been submitted for the entire property. The companion schedule of uses demonstrates residential, commercial and light industrial consistent with Policy 11.1; which encourages all three uses within developments in the Intensive Development FLU. The residential density of the property will be calculated from the entire project area consistent with the map amendment to Intensive Development FLU and the proposed amendment to establish and place the property within the Mixed Use Community Enhancement Overlay. Based on the proposed text amendment and Indigenous Preservation Restoration Management Plan, the property is eligible for a theoretical maximum of 1,859 dwelling units. However, the concurrent planned development will limit the residential density to 1,600 units consistent with Policies 11.1.1 and 11.1.2.

> ***POLICY 11.1.1:*** *Developments located within the Intensive Development, Central Urban or Urban Community future land use categories that have existing connectivity or can demonstrate that connectivity may be related to adjacent neighborhoods are strongly encouraged to be developed with two or more of the following uses: residential, commercial (including office), and light industrial (including research and development use).*
>
> ***POLICY 11.1.2:*** *Residential densities may be calculated from the entire project area when the development is consistent with the following:*
>
> - *At least three uses are proposed and must include residential, commercial (including office) and light industrial (including research and development use).*
> - *The development is located in the Intensive Development, Central Urban or Urban Community future land use categories.*

Additionally, the proposed text amendment includes Policy 5.1.10 which further supports the Mixed Use Communities Enhancement Overlay summing of density across the entire property.

> ***POLICY 5.1.10:*** *In those instances where <u>contiguous</u> land use single ownership is ~~divided~~ int~~o~~ two or more land use categories ~~by the adoption or revision of the Future Land Use Map~~, the allowable density under this Plan will be the sum of the allowable densities for each land use category for each portion of the land. This density can be allocated across the property provided that:*
>
> 1. *The planned development zoning is utilized; and*
> 2. *No density is allocated to lands designated as non-urban or Environmentally Critical that would cause the density to exceed that allowed on such areas <u>unless those lands are within a community described by the Southeast Lee County Overlay in Policy 1.6.10</u>; and*

~~*3. The land was under single ownership at the time this policy was adopted and is contiguous; in situations where land under single ownership is divided by roadways, railroads, streams (including secondary riprarian systems and streams but excluding primary riparian systems and major flowways such as the Caloosahatchee river and Six Mile Cypress lough), or other similar barriers, the land will be deemed contiguous for purposes of this policy; and*~~

3.4. The resultant planned development affords further protection to environmentally sensitive lands if they exist on the property.

The Master Concept Plan submitted with the companion planned development demonstrates the portion of the property subject to the Intensive Development FLU Map Amendment will support residential, commercial and light industrial uses. The portion of the property subject to the Mixed Use Community Enhancement Overlay will support residential development. The proposed text amendment will enable the density to be allocated in total across the multiple future land use categories across the property to support the requested development. As a result of the proposed uses the development of the subject property will also be consistent with Goals 5 and 6 for Residential and Commercial land uses.

The resulting development will be located in an area with supporting urban services, access to two arterial roadways and provide variety in the type of housing as well as commercial and light industrial uses consistent with Goal 5 Residential and Goal 6 Commercial. The requested 1,600 dwelling units and 350,000 square feet of commercial meet the threshold requirements for the Development of County Impact and require a planned development rezoning. A concurrent mixed use planned development has been submitted with the requested comprehensive plan amendments consistent with Policies 5.1.1 and 6.1.3.

In consideration of the property's location near the Southwest Florida International Airport, the Master Concept Plan demonstrates the proposed development has been clustered away from the airport property in consideration of Policy 5.1.2.

> ***POLICY 5.1.2:*** *Prohibit residential development where physical constraints or hazards exist, or require the density and design to be adjusted accordingly. Such constraints or hazards include but are not limited to flood, storm, or hurricane hazards; unstable soils or geologic conditions; environmental limitation; aircraft noise; or other characteristics that may endanger the residential community.*

The concurrent Planned Development includes a detailed Master Concept Plan that identifies the various land use restrictions related to the Southwest Florida International Airport (SWFIA). These restrictions have been taken into account with the Schedule of Deviations, Property Development Regulations, Schedule of Uses as well as the layout of the development footprint. Of particular note are the Airport Noise Zones and 10,000 foot Wildlife Buffer. Since the initial submittal of the planned development, the proposed area for residential development has been significantly reduced, no residential lots occur in Noise Zone B, and several deviations are requested to promote compatibility with the lake bank slope construction and littoral plantings due to the proximity of the airport. Consistent with the requirements of the Land Development Code, we acknowledge the property's proximity to the SWFIA and a disclosure will be provided on all plats and association documents. Finally, the applicant has drafted and submitted Proposed Conditions as part of the planned development requiring landscape plans at the time of

Development Order to reflect 100% native vegetation and compliance with the Lee County Port Authority recommended planting list and outlining additional best management practices to be considered during construction to address site related improvements and residential construction. Given the commitments the applicant has made to continue to work with the Lee County Port Authority, notice future property owners, and inform the County and LCPA of construction standards, the project is consistent with Policy 5.1.2.

Goal 5 requires sufficient land to be provided in appropriate locations on the Future Land Use Map to accommodate the projected population of Lee County. The requested plan amendment and concurrent planned development allow a suburban level of density consistent with the existing surrounding residential developments as well as the provisions of Policy 5.1.1. Additionally, no residential development is proposed within an area which is deemed a hazard or physically constraining – the residences proposed are to be located outside of Airport Noise Zone B consistent with Policies 5.1.2 and 5.1.4.

The portion of the property proposed for Intensive Development will support 350,000 square feet of commercial uses and a multi-family unit type as part of the proposed mixed use planned development. This portion of the property is within the Lehigh Acres community Planning Area and is identified for intense community supporting commercial uses and has access to all urban services consistent with Policies 6.1.4 and 6.1.7. Locating these proposed uses at the intersection of Daniels Parkway and SR 82 will promote internal capture for the future residences of the proposed development as well as walkable services to the existing and future residential use of the surrounding area including the communities of Gateway, Timber Creek, and Lehigh Acres. Providing commercial uses in a location east of I-75 within Lehigh Acres will reduce vehicular trips heading west past I-75 for goods and services consistent with Policy 6.1.5.

Lehigh Acres Community Plan

The Lehigh Acres Community Plan is outlined by Goal 25 in the Lee Plan; establishing the future vision for the entire community of Lehigh Acres, including 84.5 acres of the subject property as identified on Lee Plan Map 1-A. The amendment to Intensive Development is consistent with the future vision of Lehigh Acres and the property's location within a Specialized Mixed Use Node. The concurrent Mixed Use Planned Development will demonstrate the 350,000 square feet of commercial uses and multi-family residential product to be located within this area further fostering the development of a vibrant commercial area consistent with Goal 25.

> ***GOAL 25:*** *LEHIGH ACRES COMMUNITY PLAN. Ensure that continued development and redevelopment converts this largely single use, antiquated pre-platted area into a vibrant residential and commercial community consisting of: safe and secure single family and multi-family neighborhoods; vibrant commercial and employment centers; pedestrian friendly mixed use activity centers and neighborhood nodes; and, adequate green space and recreational opportunities.*
>
> ***OBJECTIVE 25.1:*** *SPECIALIZED MIXED USE NODES. To create mixed use nodes that contribute the uses needed to support the Lehigh Acres Community Plan area shown on Map 1, Page 7.*

> ***POLICY 25.1.2:*** *New development and redevelopment are encouraged to integrate a mixture of at least two or more varied uses, such as retail, office, residential, or public. All developments within the Specialized Mixed Use Nodes must be consistent with Table 1(c).*
>
> ***POLICY 25.1.3:*** *In order to promote a sustainable urban form, these areas are expected to develop at the higher end of the density and intensity ranges, including bonus density.*
>
> ***POLICY 25.1.4:*** *Developments in these areas are encouraged to share required features such as parking, stormwater detention and management areas, open space and other civic areas.*
>
> ***POLICY 25.1.8:*** *Establish comprehensive stormwater management areas within the Specialized Mixed Use Nodes to achieve an efficient use of property.*

The Intensive Development FLU and the Lehigh Acres portion of the property also coincide with the Specialized Mixed Use node that has been designated for the property. The companion Master Concept Plan demonstrates a higher concentration of both density and intensity within the node consistent with Policies 25.1.2 and 25.1.3. The conceptual plan will also demonstrate shared features such as unified parking, stormwater management areas, and open space which is consistent with policies 25.1.4 and 25.1.8. The provision of unified stormwater management is also demonstrated by the provided Drainage Report prepared by Morris-Depew Associates. The Master Drainage Plan included in Appendix 1 of the Drainage Report demonstrates Lakes 1, 2, and 3 within the Lehigh Acres Community Planning Area will be interconnected with the larger system in the Southeast Lee Community Planning Area. The conclusions of the Drainage Report confirm that the proposed project "will attenuate the 25-year, 3-day rainfall event within the proposed onsite water management system and reduce peak runoff discharge rates from the project limits." As a result of reducing the peak runoff rate, downstream properties will receive surface water flow at a slower rate reducing the potential of flood conditions and demonstrating consistency with the DR/GR Future Land Use and the Lehigh Acres Community Planning Area.

The Lehigh Acres Plan further breaks down the mixed use nodes into types. The 84.5 acres of the subject property is within a Community Mixed Use Activity Center demonstrated on Lee Plan Map 2-B and outlined by Objective 25.3 and its supporting policies.

> ***OBJECTIVE 25.3:*** *COMMUNITY MIXED USE ACTIVITY CENTERS. To provide the uses needed to support all of the Lehigh Acres Community Plan area including: residential; public and private education; live-work; retail; office; medical; entertainment; light industrial; commercial/public parking; parks; and, other civic uses.*
>
> ***POLICY 25.3.1:*** *Identify those areas within Lehigh Acres that have sufficient vacant or undeveloped land to accommodate the community-scale development that will balance the land uses and provide opportunities to diversify the economic base of the community.*
>
> ***POLICY 25.3.2:*** *Future developments that provide employment opportunities mixed with facilities offering goods and services that support the wider community are encouraged.*

The area will feature a mixture of commercial uses which are identified in the companion Schedule of Uses which furthers the intent of Objective 25.3. Additionally, the subject area is one of only a handful of large properties in Lehigh Acres with a sole entity for owner; and therefore one of the few areas able to

accommodate community-scale development that will diversify the community's economic base consistent with Policies 25.3.1. and 25.3.2.

> ***OBJECTIVE 25.8:*** *TRANSPORTATION, PARKING, AND TRAFFIC CIRCULATION. To improve transportation, parking, and circulation within the Lehigh Acres Community Plan area.*
>
> ***POLICY 25.8.2:*** *All connections to SR 82 must be consistent with the Florida Department of Transportation Corridor Access Management Plan for SR 82.*
>
> ***POLICY 25.8.7:*** *New single-family model homes are prohibited within 300 feet of arterial and collector roads.*

The concurrent planned development demonstrates consistency with the transportation policies of the Lehigh Acres Community Plan outlined by Objective 25.8 and its supporting policies. The Master Concept Plan (MCP) features a concentration of commercial uses at the intersection of SR 82 and Daniels Parkway significantly reducing the need for residents of the surrounding area to travel further west to meet their commercial needs. No access to SR 82 is proposed. Connections to Daniels Parkway are consistent with the Corridor Access Management Plan. Therefore the proposed site design is consistent with Policy 25.8.2. The proposed MCP also demonstrates no single family residential within the Lehigh community ensuring consistency with Policy 25.8.7.

> ***OBJECTIVE 25.9:*** *SEWER AND WATER. Expedite the staged extension of water and sewer systems, connect lots previously served by on-site septic and wells, and discourage additional development that is reliant upon on-site well and septic systems.*
>
> ***POLICY 25.9.2:*** *Direct new development and redevelopment in Lehigh Acres to areas that can be reasonably expected to receive urban services and infrastructure during the planning horizon.*

The 84 acres of the subject property within Lehigh Acres is already within the Lee County Utilities Service Area for central water and sewer service consistent with Objective 25.9 and 25.9.2. The proposed map amendments include a request to extend this service area to the remainder of the property to establish the entire future community on central water and sanitary sewer service.

> ***POLICY 25.10.1:*** *Lee County will encourage on-site preservation of indigenous plant communities and listed species habitat. Any required mitigation will be of similar habitat, and provided, whenever possible, within the Lehigh Acres Community Plan area. Development must also be consistent with Goal 77 and Objective 77.3.*

The portion of the property within Lehigh Acres has been cleared and utilized for agricultural activities. The Protected Species Survey submitted with the concurrent planned development demonstrates the northern portion of the property is disturbed lands, ditches, berms and cow pond. Therefore there are no on-site indigenous plant communities or listed species habitat on-site within the Lehigh Acres Community Planning Area to preserve. However, there are indigenous plant communities and listed species habitat within the Southeast Lee Community Planning Area, of which 55% is proposed to be preserved and restored. The restoration activities proposed will promote flow of surface water while also addressing historical impacts associated with decades of historical agricultural ditching and draining. The Master Concept Plan for the concurrent planned development does commit to providing 10% open space at the

time of local development order within the Lehigh Acres Community Planning Area ensuring consistency with Goal 77 and Objective 77.3.

Southeast Lee County Community Planning Area

The remaining 1,148 acres of the subject property are within the Southeast Lee County community planning area as identified on Lee Plan Map 1 Page 2 and described in Goal 33. A text amendment is proposed to this community plan to establish the Mixed Use Communities Enhancement Overlay which will support the residential development and hydrological/ecological restoration proposed for the property.

> ***GOAL 33: SOUTHEAST LEE COUNTY.*** *Protect Southeast Lee County's natural resources through public and private acquisition and restoration efforts. Development incentives will be utilized as a mechanism to preserve, enhance, and protect natural resources, such as regional flow-ways and natural habitat corridors in the development of privately owned land. Allowable land uses will include conservation, agriculture, public facilities, low density or clustered residential, natural resource extraction operations, and private recreation facilities; allowable land uses must be compatible with protecting Southeast Lee County's environment.*
>
> ***OBJECTIVE 33.1:*** *WATER, HABITAT, AND OTHER NATURAL RESOURCES. Protect and restore natural resources within Southeast Lee County including, but not limited to, surface and groundwater, wetlands, and wildlife habitat.*
>
> ***POLICY 33.1.1:*** *Large-scale ecosystem integrity in Southeast Lee County should be maintained and restored. Protection and/or restoration of land is of even higher value when it connects existing corridors and conservation areas. Restoration is also highly desirable when it can be achieved in conjunction with other uses on privately owned land including agriculture.*

The requested amendments seek to establish an Overlay that promotes a cohesive development plan for the entire property that enhances the intent and vision of both the Lehigh Acres and Southeast Lee community plans. Policy 33.2.X of the Lee Plan is being proposed to allow for increased density within properties contiguous to a Mixed Use Community as identified on Map 2-D. A companion amendment is proposed to Map 2-D to extend the existing Mixed Use Community more than 400 feet across the subject property and identify the area as subject to the Mixed Use Community Enhancement Overlay established by the proposed new policy. Together the proposed new policy and amendment to Map 2-D will ensure the development within the Enhancement Overlay complies with the identified design and application criteria as part of the concurrent planned development application. A total of 1,600 dwelling units are proposed on the entire property per the concurrent planned development. Additional dwelling units are proposed as incentives to be achieved related to the preserved and restored on-site wetlands and uplands. The proposed policy includes additional design criteria to promote the private preservation of native habitat and restoration of historic flow patterns within properties requesting the overlay demonstrating consistency with Goal 33, Objective 33.1 and Policy 33.1.1.

> ***POLICY 33.1.4:*** *Restoration of critical lands in Southeast Lee County is a long-term program that will progress in phases based on available funding, land ownership, and natural resource priority. On individual sites, restoration can be carried out in stages:*

1. *Initial restoration efforts would include techniques such as filling agricultural ditches and/or established control structures to restore the historic water levels as much as possible without adversely impacting nearby properties.*
2. *Future restoration efforts would include the eradication of invasive exotic vegetation and the reestablishment of appropriate native ecosystems based upon the restored hydrology.*

The subject property is not located within the DR/GR Priority Restoration Overlay; however it is the northernmost location of the Southeast Lee County Community Planning Area. The proposed text amendment includes requirements for the planned development which will promote restoration of private property that includes removal of agricultural ditches and berms to match adjacent grade, removal of exotic vegetation and planting of native vegetation, interconnection of on-site wetlands across watershed basins, and improvement of groundwater recharge on the subject property consistent with Policy 33.1.4. An Indigenous Preservation and Restoration Management Plan (IPRMP) has been provided by Passarella and Associates outlining the activities to occur and the acreage to be restored. As demonstrated by the FLUCCS included in the IPRMP there are no indigenous habitat or wetland connections across the internal farm road that identifies the watershed basin divide.

Due to the property's proximity to the SWFIA the creation of wetland habitat cannot occur to provide a wetland interconnection. As a result, the provided Drainage Report prepared by Morris-Depew Associates and concurrent Master Concept Plan, propose a physical infrastructure improvement to interconnect the two watershed basins during periods of high rainfall. This physical connection will interconnect two short hydroperiod wetland habitat types (i.e., hydric pine and mixed wetland hardwoods) and therefore connection will only occur during peak wetland water levels or after large storm events. When combined with the proposed removal of the existing agricultural berms and filling of the agricultural ditches on-site to match existing grade (outlined in Section 5.0 of the IPRMP), these activities will maintain existing water levels and eliminate exotic vegetation while achieving the objective of interconnecting wetlands, re-establishing historic flow patterns and improving water flow off-site consistent with Policy 33.1.4

> ***POLICY 33.1.7:*** *Impacts of proposed land disturbances on surface and groundwater resources will be analyzed using integrated surface and groundwater models that utilize site-specific data to assess potential adverse impacts on water resources and natural systems within Southeast Lee County. Lee County Division of Natural Resources will determine if the appropriate model or models are being utilized, and assess the design and outputs of the modeling to ensure protection of Lee County's natural resources.*

The applicant acknowledges this policy. A report entitled Characterization of Ground and Surface Water Resources provided by Progressive Water Resources provides an initial overview of the surface and ground water resources in the general area. A Drainage Report prepared by Morris-Depew Associates with Appendix L an Integrated Model Analysis prepared by Progressive Water Resources provides a detailed analysis of the surface and groundwater conditions of the existing and proposed development demonstrating no adverse impacts on water resources and natural systems. The provided Drainage Report by Morris-Depew Associates and concurrent Master Concept Plan, propose physical infrastructure improvements to the site to interconnect the two watershed basins during periods of high rainfall. The main objective of the hydrologic restoration, including the physical connection across the watershed basins, is to facilitate the north to south flow of water that existing historically while maintaining the existing wetland hydroperiods.

The proposed master drainage plan as outlined by the Drainage Report, interconnects the proposed surface water management lakes, which have a total surface area of 117 acres. The lakes within the SWFIA 10,000 hazardous wildlife buffer are proposed to have hardened 4:1 shorelines in order to minimize wildlife attractants. These lakes will be interconnected with lakes outside the 10,000-foot hazardous wildlife buffer to provide water quality treatment. The lake elevations within the stormwater management system are designed to match or exceed the existing wet season water elevations (WSWE). As outlined by the Integrated Model Analysis prepared by Progressive Water Resources, the proposed site design demonstrates a beneficial increase in recharge to the underlying Water Table Aquifer, as compared to existing conditions. The additional stormwater management will enhance water resources by providing a net benefit to groundwater recharge consistent with the DR/GR Future Land Use and Policy 33.1.7.

In addition to the developments surface water management system, a 24-inch piped connection is proposed to restore the historic interaction between the 2 on-site watershed basins. This buried connection is specifically designed to eliminate wildlife attractants. On the west side of the property (Six Mile Cypress Watershed) a water control structure, i.e., weir, will be constructed on the upstream side of the 24" buried pipe in order to selectively convey stormwater towards the Estero River Watershed during high rainfall events. High rainfall events, for purposes of this application, are defined as those in excess of a 10-year, 1-day storm. The Drainage Report prepared by Morris-Depew Associates includes multiple scenarios to demonstrate the existing and proposed conditions expected. Specifically, 4 design storms are provided:

- 2.33-year, 1-day
- 10-year, 1 day
- 25-year, 3-day
- 100-year, 3-day

These design storms demonstrate the man-made hydraulic connection proposed to interconnect the existing 2 on-site watershed basis will only occur during high rainfall events. A control structure wier is proposed and is set at an elevation above the Wet Season Water Table (WSWT) to ensure drawdown does not occur in nearby wetland habitat and prevent surface water discharging to the west (Six Mile Cypress basin) during low rainfall events. Note that the water elevation of the Six Mile Cypress Basin is slightly higher than the Estero Basin, again ensuring the flow of surface water only occurs during high rainfall events.

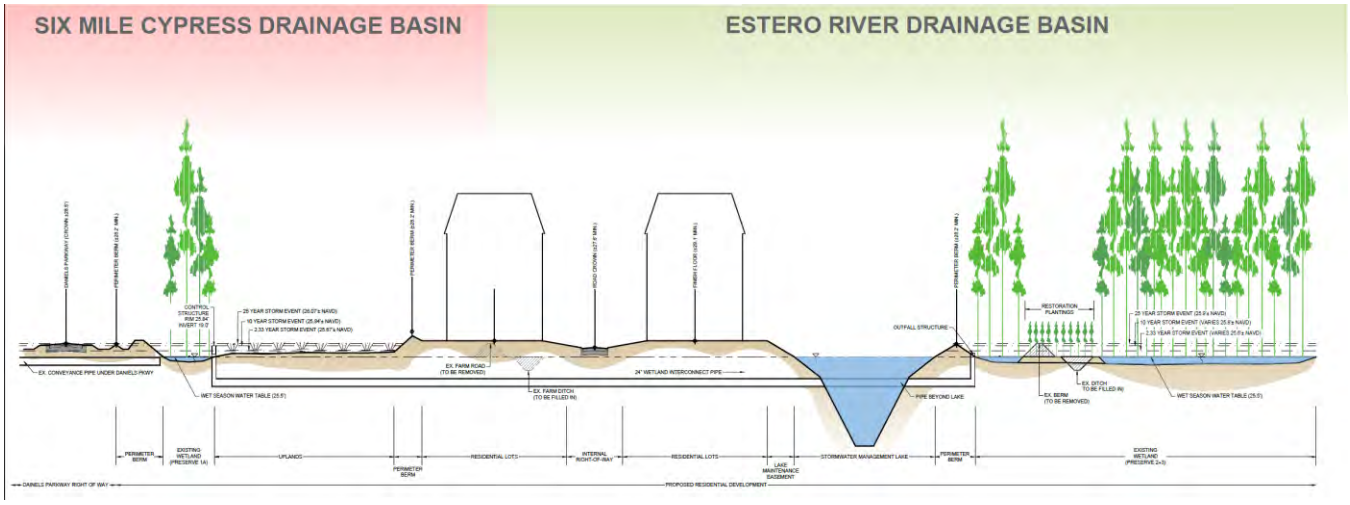

Figure 5. Typical Cross-Section for Man-man Hydraulic Connection

The proposed design accomplishes a several important objectives:

- Sets the control structure weir at an elevation that ensures that surrounding wetland areas do not experience adverse drawdown.
- Addresses varying wet season elevations within the on-site wetlands
- Prevents surface water from discharging into the Six Mile Cypress during low rain fall events.
- Connects the watersheds during high rainfall events to interconnect the on-site wetlands and re-establish historic flow patterns across the property.
- Controls the flow of surface water across the property to ensure that no adverse impacts to adjacent properties occurs.

While not a natural flowway, the proposed improvements take into account the unique conditions of the property necessary to achieve the overall objective of interconnecting wetlands, re-establishing historic flow patterns, while ensuring that no adverse impacts to adjacent properties will occur, as compared to existing conditions consistent with the DR/GR Future Land Use and Policy 33.1.7.

> ***POLICY 33.2.1:*** *Existing acreage subdivisions are shown on Map 2-D. These subdivisions should be protected from adverse external impacts.*

The Enhanced Lake Management Plan prepared by Progressive Water Resources demonstrates that the proposed development will position the proposed Sandstone Aquifer irrigation wells to prevent adverse impacts to the existing residential wells to the north. A Sandstone Aquifer monitoring well has been installed across Daniels Parkway on the Timber Creek property and the applicant has agreed to a second monitoring well on the Daniels South property. Groundwater level readings will be taken from each well. When combined with the existing USGS Sandstone Monitoring well L-729, Lee County will have significant data to monitor groundwater levels and ensure the proposed development has no negative and adverse impacts to the existing subdivisions relying upon wells.

The existing monitoring of the Sandstone Aquifer at Timber Creek demonstrating groundwater elevation levels are increasing with the onset of the rainy season. Therefore, while Sandstone Aquifer groundwater levels in certain areas of Lee County have been impacted due to overextraction, the area in which the subject property is located appears to have significantly better water resource conditions.

Is it important to also note that the nearest irrigation well is approximately 3,000 feet (0.6 miles) from Lehigh Acres. Additionally, the irrigation system is proposed to combine the use of surface and groundwater sources to reduce overall reliance on groundwater supplies, consistent with Policy 33.2.1. As a result of this design, the overall use of groundwater is anticipated to be greatly reduced, and at times intermittent to nonexistent, since the primary source of irrigation supplies is stormwater. The irrigation demands used in a groundwater modeling analysis performed by Progressive Water Resources (PWR) were based on a 1-in-10 drought frequency, i.e., drought conditions and assumes zero surface water quantities being derived from the project's stormwater wet detention lakes, a condition considered virtually impossible since it is predicated upon the wet detention lakes being completely empty for a duration of 90 days; these assumptions are considered highly conservative. Despite these conservative assumptions, the modeling indicates that the maximum month (dry season) drawdown from the operation of the irrigation running continuously for 90-days, with no recharge, is less than 1 foot at the project's eastern property boundary. As a result, there are no adverse impacts anticipated to occur to nearby existing legal users.

It is expected that a Water Use Permit (WUP) will be requested from the South Florida Water Management District (SFWMD) meeting the criteria of Chapter 373.223(1) Florida Statutes. This section of Statute establishes that WUP applicants must demonstrate any requested use of water is reasonable and beneficial and will not interfere with any existing legal use of water and is consistent with the public interest. Therefore, adverse interference to existing Sandstone Aquifer users will not be authorized.

[NOTE: Below, in Objective 33.2 and associated policies, the underlined text represents proposed additions, and ~~cross-hatched~~ text represents proposed deletions.]

Objective 33.2: RESIDENTIAL AND MIXED-USE DEVELOPMENT. *Designate on a Future Land Use Map overlay areas that should be protected from adverse impacts of mining (Existing Acreage Subdivisions), specific locations for concentrating existing development rights on large tracts (Mixed-Use Communities), specific properties which provide opportunities to protect, preserve, and restore strategic regional hydrological and wildlife connections (Environmental Enhancement and Preservation Communities), specific properties that preserve and restore hydrological connections and wildlife habitat and concentrate development rights on large tracts (Mixed Use Communities Enhancement Overlay), and vacant properties with existing residential approvals that are inconsistent with the Density Reduction/Groundwater Resources future land use category (Improved Residential Communities).*

POLICY 33.2.2: *Map 2-D identifies future locations for Mixed-Use Communities where development rights can be concentrated from large Southeast Lee County tracts into Traditional Neighborhood Developments or other clustered development patterns. The preferred pattern for residential development is to cluster density within Mixed-Use Communities with access to ~~along~~ existing roads ~~and away from Future Limerock Mining areas~~.*

1. *Southeast Lee County Mixed-Use Communities must be concentrated from contiguous property owned under single ownership or control. Residential density is calculated from the upland and wetland acreage of the entire contiguous Southeast Lee County property. Increases in residential densities may be approved through:*
   a. a planned development per Policy 33.2.X
   b. incentives as specified in the LDC for permanent protection of indigenous native uplands on the contiguous tract (up to one extra dwelling unit allowed for each five acres of preserved or restored indigenous native uplands) and
   c. through the acquisition of TDUs from TDR sending areas within Southeast Lee County as provided in Objective 33.3.
      i. The maximum gross density, is 5 dwelling units per acre of total land designated as a Mixed Use Community when TDUs are used.
      ii. Properties that concentrate development rights and/or use TDUs created from Southeast Lee County within the Mixed-Use Communities identified on Map 17 will be allowed to develop using permitted uses and the property development regulations for the C-2A zoning district.
2. *Contiguous property under the same ownership may be developed as part of a Mixed- Use Community provided it does not extend more than 400 feet beyond the perimeter of the Mixed Use Community as designated on Map 2-D. In a Mixed Use Enhancement Community Overlay developed as a planned development consistent with Policy 33.2.X,*

all contiguous property under the same ownership and control at the time of application may be included.

3. *Central water and wastewater services are required to develop a Mixed-Use Community.*
4. *Commercial uses developed as part of a Mixed-Use Community will be consistent with Policy 33.3.5 and will not exceed the allowable total square footage for commercial uses in Southeast Lee County*

The proposed text amendment establishes a Mixed Used Communities Enhancement Overlay in Objective 33.2 and Policy 33.2.2. The Enhancement Overlay is proposed to permit increased density on properties contiguous to a Mixed Use Community as identified on Map 2-D of the Lee Plan within a development area that extends farther than 400 feet from the existing Mixed Use Community. Due to the extension proposed, a new policy (copied in full below) is established to outline the restoration and design objectives that must be met by the planned development application submitted to implement the proposed Mixed Use Communities Enhancement Overlay.

POLICY 33.2.X: *Contiguous property under single ownership or control at the time of planned development application may be developed as a Mixed Use Enhancement Community provided it is immediately adjacent to a Mixed Use Community on Map 2-D and to an Urban Future Land Use Category and proposes to preserve, and restore surface and groundwater resources and indigenous wildlife habitats on such contiguous property. As an incentive to cluster development and to preserve and restore surface and groundwater resources along with wildlife habitat for state and federally listed species, additional densities may be granted if:*

1. *A portion of the property is within the "Mixed Use Enhancement Community" as designated on Map 2-D of the Plan and consistent with the criteria below:*
   a) *Located adjacent to a Mixed Use Community and Urban Future Land Use Category with direct access to an arterial road.*
   b) *Proposes to preserve and restore surface and groundwater resources and indigenous wildlife habitats; and*
   c) *Develops as a planned development.*
2. *The planned development requires the following:*
   a) *The Mixed Use Community and adjacent property under unified ownership or control are included in the planned development application.*
   b) *The Master Concept Plan must demonstrate:*
      i. *Clustered development pattern proximate to the Mixed Use Community and adjacent arterial roadways that maintains large contiguous tracts of open space and protects environmentally sensitive areas;*
      ii. *Preservation or restoration of existing wetland and upland habitat which will be used to:*
         1. *Restore hydrological connectivity or flow-ways where they are currently or previously existed; or*
         2. *Sustain and help restore existing and historic groundwater levels; or*
         3. *Preserve, enhance and restore indigenous Rare and Unique Upland habitats.*
      iii. *Indigenous Preservation Areas that:*
         1. *Are a minimum of 55% of the planned development.*

2. *Have an Indigenous Preservation, Restoration and Management Plan addressing:*
    a. *Preliminary restoration plans, demonstrating minimum dimensions required for indigenous open space area set forth in the LDC;*
    b. *Methods for exotic and nuisance plant removal;*
    c. *Wetland hydrological reconnections;*
    d. *Lands identified for the restoration/creation of Rare and Unique Upland habitat containing the soil(s) needed to support the establishment and success of the indigenous Rare and Unique upland habitats;*
    e. *Replanting plans;*
    f. *Management plans with success criteria, monitoring and maintenance for 5 consecutive years; and*
    g. *Protected species, Airport Wildlife Management, and human-wildlife coexistence plans.*
3. *Will be platted in separate tracts and dedicated to an appropriate maintenance entity. Prior to the Certificate of Compliance (CC) for the first development order, a Community Development District or master property owners association must be created and accept responsibility for perpetually maintaining preservation areas larger than 300 acres.*
4. *Be placed under conservation easement dedicated to a maintenance entity that provides Lee County (or another public entity acceptable to Lee County) with third party enforcement rights. Conservation easements must be recorded within 5 years of first development order approval.*

c) *An enhanced lake management plan including:*
    i. *Best management practices for fertilizers and pesticides;*
    ii. *Erosion control and bank stabilization practices; and*
    iii. *Lake maintenance requirements.*

d) *A water quality monitoring plan demonstrating that stormwater leaving the development meets state and federal water quality standards.*

e) *Agricultural irrigation and fertilizers (or other agricultural chemicals) for agricultural purposes must cease at the time of the first development order approvals.*

f) *Protection of public wells by demonstrating compliance with the Wellfield Protection Ordinance.*

g) *Florida Friendly Plantings and/or Lee County Port Authority (LCPA) Compatible Plantings with low irrigation requirements in common elements will be encouraged.*

h) *Written verification of adequate public services for the planned development from the sheriff, EMS, fire district and Lee County School District.*

3. *As a result of supporting a Mixed Use Community, the recreation of historic flow paths and preservation of natural habitat, and restoration or creation of Rare and*

Unique uplands, additional incentive density equivalent to 1 dwelling unit per acre of preserved or restored wetland or upland habitat may be approved through planned developments meeting the criteria above.

1. *Additional incentive density will be based upon the acreage of the preserved or restored wetland or upland habitat (i.e. all areas within the boundary of the planned development whether uplands or wetlands.)*
2. *Density from the contiguous Mixed Use Community and Urban Future Land Use Category may be transferred into the area of the Mixed Use Enhancement Community.*

The proposed policy identifies specific locations which can request additional development beyond 400 feet of an existing Mixed Use Community Boundary on Map 2-D where;

1. A portion of the property is within an existing Mixed Use Community identified on Map 2-D;
2. A portion of the property is within an Urban Future Land Use Category;
3. The property has direct access to an arterial roadway; and
4. The concurrent planned development preserves and restores surface and groundwater resources and indigenous wildlife habitats.

The proposed policy also promotes a clustered development pattern for the additional units resulting from the preservation and restoration of existing on-site wetlands and uplands to promote flow paths of surface water in historical locations across the subject property. Due to development of the property for agricultural purposes in the late 1940s, the property has been hydrologically divided into east and west sections by a north/south internal farm road. The historic agricultural surface water management system of the property is an extensive network of ditches and berms which have artificially partitioned, and disconnected sections of the natural wetland system on-site. These existing conditions are proposed to be improved to restore native habitats and historical flow paths, and improve groundwater recharge from existing conditions. The existing agricultural berms will be removed and the additional material will be used to fill the adjacent agricultural ditches to match existing grade. After regrading activities, the areas will be planted with native vegetation as outlined in the IPRMP (Tables 2 and 3) and consistent with the LCPA Compatible Native Landscape List. In recognition of the competing concerns related to wildlife attractions in the proximity of the airport, the proposed restoration of the property does not include the creation of additional wetland or upland habitats. As an example an existing melaleuca forest on-site, when in an area proposed for restoration, will be replanted with herbaceous vegetation as outlined in Section 5.0 of the IPRMP. The areas proposed for restoration have historically been adversely impacted by the construction of berms, exotic infestation, and adjacent agricultural activities and the proposed activities will reconnect the on-site wetland systems.

Transportation

A full transportation analysis has been prepared by TR Transportation and is attached to the supporting documentation for this application. This analysis included long term (20 year horizon) and short term (5 year horizon) impacts of the proposed development.

OBJECTIVE 37.1: GENERAL STANDARDS. *Monitor non-regulatory LOS standards outlined in Policy 95.1.3. on county and state transportation facilities within Lee County. Cooperate with*

municipalities on the facilities maintained by Lee County within the municipalities and with FDOT on state transportation facilities.

POLICY 37.1.1: *Lee County will develop multi-modal service volumes (capacities) based on local Lee County conditions for determination of the LOS of transportation facilities.*

The analysis provided by TR Transportation demonstrates that SR 82 and Daniels Parkway will not fall below the recommended minimum acceptable Level of Service thresholds and therefore is consistent with Objective 37.1 and Policy 37.1.1.

OBJECTIVE 39.2: TRANSPORTATION AND LAND USE PLANNING. *Develop and maintain transportation planning tools and strategies to coordinate land use development with planned transportation facilities appropriate to future urban areas, future suburban areas, or future non-urban areas as defined. Include road designs and street modifications to accommodate significant truck traffic on freight corridors identified in the MPO Freight Mobility Study and for transit, bicycle and pedestrian facilities where indicated on the transportation map series and Map 4-E, Lee County Greenways Master Plan.*

POLICY 39.2.1: *Future urban areas will have a balanced emphasis on automobile, freight, transit, pedestrian, and bicycle modes of transportation by:*

- *Promoting safe and convenient street, bicycle and pedestrian facilities connectivity for easy access between modes.*
- *Utilizing short block lengths within urban Mixed Use Overlay areas.*
- *Providing transit service within an emphasis on urban Mixed Use Overlay areas.*
- *Incentivizing infill and redevelopment, mixed uses, pedestrian friendly design, and higher density in areas served by transit.*
- *Providing sidewalks along all roads and streets in urban areas, except where prohibited.*

POLICY 39.2.3: *Future non-urban areas are planned primarily for motor vehicle transportation by:*

- *Limiting transit service and provision of separate pedestrian facilities in the Mixed Use Overlay areas unless otherwise stated in the LDC.*
- *Accommodating bicycle usage on bicycle lanes, paved shoulder or multi-use recreational trail facilities.*

The subject property is within a Future Urban and a Future non-urban location at the intersection of two major arterial roadways in Lee County, Daniels Parkway and State Road 82. The traffic analysis provided by TR Transportation demonstrates adequate capacity to serve the proposed development. Sidewalks are provided along the SR 82 frontage and will be provided consistent with LDC Chapter 10 along Daniels Parkway during construction of the residential development. The concurrent planned development will demonstrate internal roadway cross sections consistent with LDC Chapter 10 with pedestrian facilities internal to the proposed development for connectivity across the 1,233 acre property. The future proposed development will be consistent with Objective 39.2 and Policies 39.2.1 and 39.2.3

> ***POLICY 39.2.5:*** *Establish connection separation standards in the LDC based on functional classification and future urban, suburban, or non-urban area designation. Designate by Board action, certain roadways as "controlled access," to which permanent access points are restricted to locations established and set by a specific access plan adopted by Board resolution.*

The subject property fronts on SR 82 (which is a controlled access facility) and Daniels Parkway. The concurrent planned development will demonstrate access to the proposed subdivision consistent with the appropriate locations for each roadway and Policy 39.2.5.

> ***OBJECTIVE 47.2:*** *DEVELOPMENT COMPATIBILITY IN VICINITY OF AIRPORTS. Evaluate development proposals for property located within the vicinity of existing or planned aviation facilities to ensure land use compatibility, to preclude hazards to aircraft operations, and to protect airport capacities and facilities.*
>
> ***POLICY 47.2.1:*** *Land use compatibility will be considered when reviewing development proposals within the vicinity of existing or planned aviation facilities.*
>
> ***POLICY 47.2.3:*** *Utilize the currently adopted Airport Master Plans, rules of Chapter 333, F.S., and the Southwest Florida International Airport FAR Part 150 Study, including updates, as a basis to amend the Lee Plan and the Land Development Code to prohibit development that is incompatible with the Southwest Florida International Airport or Page Field Airport; and, to ensure future economic enhancement consistent with Objective 47.1.*
>
> ***POLICY 47.2.5:*** *The safety of aircraft operators, aircraft passengers, and persons on the ground will guide the Port Authority's airports operations. Hazardous wildlife attractants within 10,000 feet of a Port Authority airport's Air Operations Area (AOA) will be avoided by minimizing and correcting any wildlife hazards arising from wetlands or water bodies in accordance with FAA AC 150/5200-33B, or as otherwise amended. Site improvements on or near the Port Authority's airports must be designed to minimize attractiveness to wildlife of natural areas and man-made features such as detention/retention ponds, landscaping, and wetlands, which can provide wildlife with ideal locations for feeding, loafing, reproduction and escape.*

The subject property is proximate to the Southwest Florida International Airport. As a result, the proposed text amendment does not include the establishment of new habitat. Existing on-site wetlands and uplands are proposed to be preserved, as required, and restored in their current locations in ways that will minimize attractiveness to increased wildlife activity. The concurrent planned development includes design deviations to minimize opportunities for additional wading birds or other wildlife hazardous to airport activities to be attracted to the property. Lake bank slopes are proposed to be hardened and associated deviations are requested. Wetland restoration is not increased within the 10,000 foot wildlife buffer and the Indigenous Preservation Restoration Management Plan demonstrates a like for like restoration to maintain existing habitat types. Plantings within the buffer are proposed to be consistent with the Lee County Port Authority compatible plant list. Finally, hydrologic restoration of the on-site wetlands is not anticipated to increase wetland hydroperiods but will remove the existing berms and ditched to create an interconnected system.

As part of the concurrent planned development, the Master Concept Plan demonstrates a design that takes into account the noise zones on the subject property and does not propose residential uses in prohibited

zones. Proposed conditions have been submitted demonstrating requirements for bear proof trash containers, below ground commercial grease traps, a wildlife monitoring plan with observation timeframes required at the time of Development Order and the applicant has been in continued coordination with the Lee County port Authority regarding construction-related best management practices to address dewatering and other site related construction activities. Collectively the proposed text amendment and site design will demonstrate consistency with Objective 47.2 and Policies 47.2.1, 47.2.3 and 47.2.5.

Surface Water Management

The subject property will have a centralized surface water management system that takes into account the existing natural features. Restoration of these features is proposed as part of the Indigenous Preservation and Restoration Management Plan and Drainage Plan to promote interconnectivity and address the impacts of on-going agricultural activities on-site.

> ***GOAL 60:*** *COORDINATED SURFACE WATER MANAGEMENT AND LAND USE PLANNING ON A WATERSHED BASIS. To protect or improve the quality of receiving waters and surrounding natural areas and the functions of natural groundwater aquifer recharge areas while also providing flood protection for existing and future development.*
>
> ***POLICY 60.1.1:*** *Require design of surface water management systems to protect or enhance the groundwater.*
>
> ***POLICY 60.1.2:*** *Incorporate, utilize, and where practicable restore natural surface water flowways and associated habitats.*
>
> ***POLICY 60.1.3:*** *Examine steps necessary to restore principal flow-way systems to assure the continued environmental function, value, and use of natural surface water flow-ways and associated wetland systems.*

The subject property has been cleared and improved in support of agricultural activities since the late 1940s. The existing north/south agricultural road establishes a surface water divide on the subject property and is recognized as a basin divide between the Six Mile Cypress Sub-Watershed and Estero River Sub-Watershed. The area east of the basin divide is hydrologically separated from lands to the west and is orphaned from the balance of the DR/GR. Natural flows from the west also appear constrained from Daniels Parkway as outlined in the Characterization of Ground and Surface Water Resources provided by Progressive Water Resources.

Lee County's Historic Flowways Map indicates historic flow-way connections existing internal to the property and therefore a hydrological connection between the subject property and the balance of the DR/GR. The proposed text amendment requires a clustered development plan and the restoration of historic flow paths identified on the historic flowway map. However, the subject property is in close proximity to the SWFIA and creation of additional wetland habitat cannot be accommodated due to the wildlife attractants that would be created. To interconnect the two watershed basins across the existing agricultural road as identified on the historic flowway map, an underground physical infrastructure improvement is proposed. As outlined by the Drainage Report prepared by Morris-Depew Associates, 24-inch buried piped connection is proposed to interconnect the 2 on-site watershed basins and associated wetlands.

While not a natural flowway, the proposed improvements take into account the unique conditions of the property to achieve the overall objective of interconnecting wetlands, re-establishing historic flow patterns across the property and ensuring no adverse impacts to adjacent properties will occur, as compared to existing conditions consistent with Objective 60.1 and Policies 60.1.1, 60.1.2 and 60.1.3.

> ***OBJECTIVE 60.3:*** *CRITICAL AREAS. The Six Mile Cypress Basin (as defined in Chapter 10 of the Land Development Code) and the Density Reduction/Groundwater Resource land use category are both identified as "critical areas for surface water management." The county will maintain existing regulations to protect the unique environmental and water resource values of these areas.*

The Characterization of Ground and Surface Water Resources and Draft Enhanced Lake Management Plan prepared by Progressive Water Resources includes an outline of Water Quality Management Practices. A surface water quality monitoring program is proposed to ensure that surface water entering and exiting the proposed development meets all SFWMD ERP guidelines as well as all applicable requirements of Chapter 62-302, FAC. The program includes a single set of background samples after the completion of the surface water management lakes, 3 sampling events during the wet season, and continuous monitoring for 5 years. Monitoring is proposed to be discontinued after 5 years if surface water quality is demonstrated as being consistent with State standards. An annual report summarizing all monitoring activity will be provided by March 1 of each year. The proposed conditions included in the concurrent planned development outline the timing of the sampling, the parameters to be tested during sampling and the requirement for continuous monitoring for 5 years. Additionally all data will be provided to Lee County Division of Natural Resources in electronic format for utilization in larger countywide studies. Additional coordination is expected through the review of the requested comprehensive plan amendments and planned development applications to ensure the project's consistency with Objective 60.3.

> ***GOAL 61:*** *PROTECTION OF WATER RESOURCES. To protect the county's water resources through the application of innovative and sound methods of surface water management and by ensuring that the public and private construction, operation, and maintenance of surface water management systems are consistent with the need to protect receiving waters.*
>
> ***POLICY 61.1.6:*** *When and where available, reuse water should be the first option for meeting irrigation needs of a development. Where reuse water is not available, surface water or low quality groundwater should be utilized for irrigation. All other potential water sources must be eliminated prior to selecting potable water as the sole source for meeting the irrigation needs of a development. New developments will coordinate with county staff regarding the source of irrigation water.*

As described by the Characterization of Ground and Surface Water Resources Report prepared by Progressive Water Resources, reclaimed water lines are not available in proximity of the subject property. Therefore, a mix of surface water from the on-site management system and supplies from the confined Sandstone Aquifer are proposed to be utilized consistent with Objective 61 and Policy 61.16. Additionally, the Draft Enhancement Lake Monitoring Plan prepared by Progressive Water Resources outlines a proposed Water Quality Monitoring program to ensure that surface water entering and leaving the subject property meet State standards and protect receiving waters consistent with Goal 61.

Environmental

As demonstrated by the supporting information prepared by Passarella and Associates, the proposed amendment is consistent with and furthers Conservation Goals, Objectives and Policies. The property supports an active agricultural operation and has had an elevated north/south historic farm road since at least 1958. This site condition has created a hydrological divide on the property creating east and west sections. Additionally, the on-site wetlands have berms and ditches creating artificial partitions and disconnecting sections within the natural system.

The Environmental Assessment provided by Passarella and Associates identifies the predominate land cover, approximately 40.7%, is improved and low pasture. Ditches, berms and other disturbed lands are approximately 7.6% of the property. Collectively, these areas amount to approximately half of the property and have resulted in impacts to the natural habitat on-site.

The requested amendments seek to preserve and restore existing wetland and upland habitats to provide flow patterns across the existing basin divide in locations generally consistent with historical patterns mapped by Lee County.

> ***GOAL 123:*** *RESOURCE PROTECTION. Manage coastal, wetland and upland ecosystems and natural resources in order to maintain and enhance native habitats, floral and faunal species diversity, water quality, and natural surface water characteristics.*
>
> ***POLICY 123.1.1:*** *Maintain standards for development, mitigation and conservation that will protect and integrate wetlands and Rare and Unique upland habitats as defined in this plan.*
>
> ***POLICY 123.1.5:*** *Encourage private restoration of natural habitats to support connectivity between public and private conservation and preservation efforts.*
>
> ***POLICY 123.1.7:*** *Coordinate the location of area wide conservation easements to maximize the protection of natural resources.*
>
> ***POLICY 123.2.6:*** *Avoid destruction of upland vegetation communities including coastal and interior hammocks through consideration of alternative site design layouts.*
>
> ***POLICY 123.2.10:*** *Require that development adjacent to aquatic and other nature preserves, wildlife refuges, and recreation areas be designed to protect the natural character and public involvement in these areas.*
>
> ***POLICY 123.2.15:*** *Protect Rare and Unique upland habitats from development impacts, to the maximum extent possible, through conservation and/or site design.*

The property is in an area of Lee County where policy priorities have been established by the Board of County Commissioners for the preservation of regional flowways and habitat. This policy direction is a long standing priority for the County and can be seen through numerous mitigation lands and conservation purchases as well as private restoration and preservation that have occurred within the Southeast Lee County Community Planning Area over the years. The Property is proximate to the Wild Turkey Strand Preserve; although not interconnected. The property's southern boundary is triangular in shape and ceases north of an existing FPL easement. Wild Turkey Strand Preserve is most of Sections 28 and 27

south/southwest of the FPL Easement. The property between the FPL easement and Wild Turkey Strand Preserve limits is held in private ownership. In recognition of this proximity and the privately held lands south of the FPL easement adjacent to Wild Turkey Strand, the southern portion of the Property is proposed for Indigenous preservation and restoration consistent with policy 123.2.10. As previously mentioned due to the proximity to the SWFIA, wetland enhancement and increased restoration is not proposed but like for like restoration activities are planned. Indigenous uplands, including Rare and Unique Uplands, surrounding the wetlands are also proposed for preservation and restoration. Approximately 58.1 acres of mature pine flatwoods, which is considered a Rare and Unique Upland habitat, are preserved by the proposed site plan in the concurrent mixed use planned development. The proposed preservation and restoration efforts are outlined in detail within the Indigenous Preservation and Restoration Management Plan prepared by Passarella and Associates which demonstrates consistency within Goal 123. Additionally, the proposed text amendment requires a conservation easement to be executed for the indigenous preservation and restoration areas; which will include 55% of the overall development as demonstrated by the concurrent Master Concept Plan. With future efforts, connectivity between the subject property's indigenous areas/conservation easements and Wild Turkey Strand Preserve may be possible consistent with policy 123.1.5.

> ***POLICY 77.3.6:*** *Coordinate trails and greenway planning and construction efforts with private landowners to identify, protect develop and manage linear open space connectors for recreation and conservation greenway corridors and encourage private landowners to dedicate greenway facilities for public recreational use through incentives and impact fee credits.*
>
> ***POLICY 77.3.7:*** *New development and redevelopment in areas containing a component of the greenways trail system, as identified by the Lee County Greenways Master Plan, must incorporate the greenway trail into their development design. In addition to counting towards the project's, general open space requirements, development constructing the onsite portions of the greenway trail will be eligible for community and regional park impact fee credit.*

As described above the subject property does not have an interconnection with Wild Turkey Strand. An existing greenway connector currently exists along Daniels Parkway, Captiva-Hendry Trail. The applicant intends to pay a fee-in-lieu if additional improvements are needed at the time of Development Order. As explained within the concurrent planned development, the existing sidewalk infrastructure on Daniels Parkway was constructed with the initial Capital Improvement Project and the public cross-section does not have adequate width to provide additional infrastructure.

> ***OBJECTIVE 123.3:*** *WILDLIFE. Maintain and enhance the fish and wildlife diversity and distribution within Lee County for the benefit of a balanced ecological system.*
>
> ***POLICY 123.3.1:*** *Encourage upland preservation in and around preserved wetlands to provide habitat diversity, enhance edge effect, and promote wildlife conservation.*
>
> ***POLICY 123.3.3:*** *Protect wildlife from impacts of new non-agricultural development in non-urban areas through the creation and implementation of a human-wildlife coexistence plan for each new development requiring a development order.*

OBJECTIVE 123.4: *ENDANGERED AND THREATENED SPECIES IN GENERAL. Protect habitats of endangered and threatened species and species of special concern in order to maintain or enhance existing population numbers and distributions of listed species.*

POLICY 123.12.2: *Encourage use of bear proof containers to secure waste and other attractants within and adjacent to know bear habitats.*

The proposed Text Amendment to establish the Mixed Use Communities Enhancement Overlay seeks to preserve and restore existing native habitats on-site to promote natural surface water characteristics and general flow patterns that existed on-site historically consistent with Goal 123. Consistent with Objective 123.4 the concurrent planned development will demonstrate that restoration is proposed for wetland and upland communities consistent with Policy 123.3.1. Such preservation and restoration will accommodate existing wildlife that inhabits the property in ways that acknowledge the property's proximity to Southwest Florida International Airport and minimize attractiveness of the preserved areas to wildlife consistent with Policy 47.2.5. As part of the Indigenous Preservation & Restoration Management Plan, a Human-Wildlife Co-existence Plan has been provided consistent with Policy 123.3.3. The Proposed Conditions provided as part of the concurrent planned development demonstrate that it is expected this plan will be updated at the time of Development Order. The Proposed Conditions also demonstrate the bear proof trash container for the residential development and below ground grease traps for the commercial development are required to promote consistency with Policy 123.12.2.

The Environmental Assessment prepared by Passarella and Associates indicates that approximately 532 acres of the subject property are considered wetlands. However, the proposal **will not create additional** wetland habitat. Due to proximity to Southwest Florida International Airport, restoration activities are only proposed within existing upland and wetland habitats. As an example, a melaleuca forest existing on-site within an area proposed for restoration would have the exotic vegetation removed and replaned with herbaceous vegetation. Plantings, as outlined by the IPRMP, will be consistent with the LCPAs compatible Native Landscape List. In addition to the removal of exotics and replanting with appropriate vegetation, the existing agricultural berms will be removed and the material will be utilized to fill the existing agricultural ditches to be level with existing grade. This restoration will improve hydrogeological connectivity across the property as compared to existing conditions. A Jurisdictional Determination has been secured from the South Florida Water Management District to memorialize the location of on-site wetlands and address any impacts proposed by the concurrent planned development.

GOAL 124: *WETLANDS. To maintain and enforce a regulatory program for development in wetlands that is cost-effective, complements federal and state permitting processes, and protects the fragile ecological characteristics of wetland systems.*

POLICY 124.1.1: *Ensure that development in wetlands is limited to very low density residential uses and uses of a recreational, open space, or conservation nature that are compatible with wetland functions. The maximum density in the Wetlands category is one unit per 20 acres, except that one single family residence will be permitted on lots meeting the standards in Chapter XIII, and except that owners of wetlands adjacent to Intensive Development, General Interchange, Central Urban, Urban Community, Suburban, New Community and Outlying Suburban areas may transfer densities to developable contiguous uplands under common ownership in accordance with Footnote 8b of Table 1(a), Summary of Residential Densities.*

The concurrent planned development will demonstrate that wetland impacts are proposed to support a residential subdivision with a maximum of 1,600 dwelling units and accessory uses. Across the 1,233 acre property, the requested 1,600 units establishes a density of approximately 1.3 dwelling units/acre – a low density with recreational amenities proposed to support the community consistent with Policy 124.1.1. A jurisdictional determination has been provided from the South Florida Water Management District and the location of the jurisdictional wetlands has been provided for purposes of mapping the Wetlands Future Land Use category.

> ***GOAL 125: Water Quality.*** *To ensure that water quality is maintained or improved for the protection of the environment and people of Lee County.*
>
> ***POLICY 125.1.2:*** *New development and additions to existing development must not degrade surface and groundwater quality.*
>
> ***POLICY 125.1.3:*** *The design, construction, and maintenance of artificial drainage systems must provide for retention or detention areas and vegetated swale systems that minimize nutrient loading and pollution of freshwater estuarine systems.*

The proposed development will eliminate the existing drainage ditches and berms associated with the historic agricultural operations on-site to restore and enhance the existing on-site water resource conditions. As previously discussed the Draft Enhanced Lake Management Plan prepared by Progressive Water Resources includes a Water Quality Monitoring program to ensure surface water entering and exiting the subject property meets State standards. Through the issuance of the required Environmental Resource Permit by the SFWMD, reasonable assurances are provided to the County that surface and groundwater resources will be protected and maintained. Additionally, the Proposed Conditions submitted with the concurrent planned development outline the monitoring schedule and parameters to be tested. The proposed Drainage Report prepared by Morris-Depew Associates demonstrates a unified stormwater management system which will "attenuate the 25-year, 3-day rainfall event within the proposed onsite water management system and reduce peak runoff discharge rates from the project limits." The stormwater management system is required to be designed based on the SFWMD Environmental Resource Permit program and consistent with the criteria of Part IV of Chapter 373, Florida Statutes. Through the issuance of the ERP, the proposed development will maintain water quality for surface and groundwater that will meet and potential exceed State and Federal Standards.

The proposed design included in the Master Drainage Plan (Appendix A) demonstrates the integrated water management lakes will have a total surface area of 117 acres. Due to the project's proximity to the SWFIA and inclusion within the 10,000-foot hazardous wildlife buffer, some lake banks are proposed to be hardened with no littoral plantings to minimize wildlife attractants. These lakes will be interconnected with the lakes outside the 10,000-foot hazardous wildlife buffer to ensure water quality treatment is provided prior to discharge off-site. As demonstrated by the Drainage Report, Master Concept Plan, Proposed Conditions, and through the subsequent development order, the proposed development will be consistent with Policies 125.1.2 and 125.1.3.

> ***POLICY 126.1.1:*** *Natural water system features which are essential for retention, detention, purification, runoff, recharge and maintenance of stream flows and groundwater levels shall be identified, protected and managed.*

POLICY 126.1.4: *Development designs must provide for maintaining or improving surface water flows, groundwater levels and lake levels at or above existing conditions.*

The subject property has 532 acres of wetlands of which 520.9 acres are proposed to be preserved and restored. Completion of the activities outlined in the Indigenous Preservation and Restoration Management Plan will improve the wetland's ability to retain stormwater through the elimination of the existing agricultural ditches; which internally impounds the wetlands. The proposed restoration will increase surface water detention while reducing run off which will also enhance water quality through vegetative and native soil filtration. The Master Concept Plan demonstrates that physical infrastructure improvements are proposed to be constructed to interconnect the 2 existing watershed basins on-site. With this infrastructure improvement, the Master Drainage Report prepared by Morris-Depew Associates and Integrated Model Analysis prepared by Progressive Water Resources demonstrates that the peak runoff of the proposed development will be less than the existing conditions, decreasing the potential for flood conditions on downstream properties. Additionally, the proposed development increases groundwater recharge conditions as compared to the existing conditions allowing increased hydration of the northern portion of the DR/GR. To the maximum extent possible given the proximity of the property to the SWFIA the proposed development incorporates natural features for improving surface water flows, groundwater levels and lake levels consistent with Policies 126.1.1 and 126.1.4.

Conclusions

The requested amendments, incorporating the Mixed Use Community Enhancement Overlay, are the first step of the entitlement process to establish a cohesive master plan with unified commercial and residential development on the subject property consistent with the Southeast Lee and Lehigh Acres Community Plans. Developed independently under presently permissible land use, the development patterns would be scattered and uncoordinated with a portion relying on wells and septic, further conflicting with the general intent and vision of the DR/GR Future Land Use.

As proposed, the Overlay also provides the opportunity to evaluate properties individually for redevelopment to determine if the required prerequisites and the proposed development conditions as part of a concurrent planned development have been met. An emphasis has been placed on the preservation and restoration of native habitat in a manner that also restores historic flow patterns across the property promoting the overall intent of the DR/GR which could not be achieved without the requested amendments.

The supporting materials provided as part of this amendment request demonstrate a unified stormwater management system that will appropriately address nutrient loading and surface water quality while interconnecting the 2 watershed basins on-site in a manner consistent with the property's proximity to SWFIA. This design promotes a beneficial increase in recharge to the underlying Water Table Aquifer as compared to existing conditions. The design also clusters the proposed development in a manner that preserves or enhances 55% of the property, consistent with other overlays within the Southeast Lee Community Planning Area. However, incentive density is only requested for the preserved or restored indigenous habitat; which includes Rare and Unique Upland Habitat, an enhancement over existing overlays within the Southeast Lee Community Planning Area. The proposed amendments and site design take into account the unique conditions of the subject property to appropriately balance the objectives of the DR/GR FLU, Southeast Lee Community Planning Area, potential wildlife attractants to re-establish

historic flow patterns, increase aquifer recharge, reduce off-site surface water flows, and preserve and restore 679 acres of habitat.

Daniels Parkway South
Comprehensive Plan Amendment
Public Facilities Impact Analysis – Exhibit M14
Existing and Future Conditions Analysis – Exhibit M16

June 10, 2022

The Property for the proposed development is located in Future Urban and Non-Urban Area. More specifically an amendment from Central Urban to Intensive Development is proposed with the remainder of the property staying within the DR/GR and Wetlands categories. However, the property is within an area of the County that has been designated for urban services. A majority of the urban services are adjacent to or within the vicinity of the subject property and available to serve the property and its residents/occupants. Copies of all Letters of Availability from each service provider are attached to the application for reference. The impacts of the requested amendments on public facilities are evaluated by comparing the existing development to the proposed development per the comprehensive plan amendments and concurrent rezoning.

Utilities (Public sewer and water)
The subject property is partially within the service area for Lee County Utilities and a Letter of Availability has been included in the application materials to demonstrate adequate capacity is available to serve the proposed development and will be provided by the Corkscrew Water Treatment Plant and Gateway Water Treatment Plant. A map amendment is requested to extend the Lee County Utilities Service area across the entire property to provide central water and sewer services to the proposed development. While the proposed amendments would increase the available density on the subject property, the requested commercial square footage is currently permissible within the existing Central Urban FLU.

Per Lee Plan Policy 95.1.3, an average treatment and disposal capacity of 250 gallons per day per Equivalent Residential Connection (ERC) for potable water is required. The 2021 Concurrency Report indicated that Potable Water is available at a capacity of 314 gallons per day per ERC; which exceeds the required LOS. The 2021 Concurrency Report also confirms that all wastewater systems are operating within capacity and meet the LOS standard for unincorporated Lee County.

Potable Water
Existing Maximum Residential per Central Urban, DR/GR and Wetlands FLUs:
933.4ERC X 250 GPD = 233,350 GPD

Proposed Impact of Residential within Overlay:
1,859ERC X 250 GPD = 464,750 GPD

Sanitary Sewer
Existing Maximum Residential per Central Urban, DR/GR and Wetlands FLUs:
933.4 ERC X 200 GPD = 186,680 GPD

Proposed Impact of Additional Residential within Overlay
1,859 ERC X 200 GPD – 371,800 GPD

Public Safety (Police, Fire, and EMS)
The subject property is able to be served by multiple providers for Emergency Medical Services, Fire and Police. Lee County Emergency Medical Services is the primary EMS transport for the subject property. However, the property is also within the Lehigh Acres Fire District which provides medical transport as well. Both service providers would work together to serve the subject property. Lee County EMS does not have a resource in this area, but the concurrent planned development includes land area for future expansion of service.

The subject property is also served by two Fire Districts, the South Trail and Lehigh Acres Fire Districts. The South Trail Fire District would serve the southern portion of the property from Station 63 located at 5531 Halifax Ave. The Lehigh Acres Fire District would serve the northern portion of the property from the located at 636 Thomas Sherwin Ave. S. The agency is capable of providing services to the subject property as it falls within the boundaries of the fire district.

The subject property is located wholly within the service area for the Lee County Sheriff. The Central District Station located at 14750 Six Mile Cypress Parkway is responsible for providing service to the subject property.

Schools
The subject property is within the Lee County School District East Zone, E2. According to the Letter of Availability from the Lee County School District the proposed development will generate 475 school-age children. There is capacity within the entire school district to accommodate the additional children.

Any deficit created at the middle school level will be addressed via the opening of the new LAMS campus (middle school MM) in the 2021-2022 school year which will add 1,210 seats of permanent capacity.
1,210 [proposed new seats in MM] – 1,108 [existing deficit] = 102 seats [capacity].

Any deficit created at the high school level will be addressed via the opening of the Gateway High School campus during the 2021-2022 school year which will add 1,475 seats in additional capacity.
1,475 [proposed new seats at Gateway High] – 469 [existing deficit] = 1,006 seats [capacity]

Solid Waste
The property is within the Lee County Solid Waste Franchise and is served through Lee County's franchised hauling contractor. Disposal of waste generated from the subject property will be accomplished at the Lee County Resource Recovery Facility and the Lee-Hendry Regional Landfill. Service is available to the subject property and plans have been established that target growth and long term disposal capacity for this particular area.

LOS Standard = 7 lbs/day/capita OR 990,405 tons/year
Current Capacity = 7.9 lbs/day/capita OR 1,134,667 tons/year

Existing Maximum Residential Impact per DR/GR & Wetlands FLUs
88.9 dwelling units X 2.64 persons per unit = 234.69 persons
234.7 persons X 7lbs./day = 1,642.8 lbs./day
1,642.8 lbs./day X 365 days = 599,648.28 lbs./year
599,648.28 lbs./year = 299.8 tons/year

Proposed Impact of Additional Residential per Overlay
1,600 dwelling units X 2.64 persons per unit = 4,224
4,224 persons X 7lbs./day = 29,568 lbs./day
29,568 lbs./day X 365 days = 10,792,320 lbs./year
10,792,320 lbs./year = 5,396.16 tons/year

Surface Water/Drainage Basins
The regulatory standards described in Policy 95.1.3(4)(c) require new development to be designed to South Florida Water Management District (SFWMD) standards to detain or retain excess stormwater to match the predevelopment discharge rate for the 25-year, 3-day storm event. Additionally, it requires that the stormwater system must prevent the flooding of designated evacuation routes on the Lee Plan Map 15 from the 25-year, 3-day storm event for more than 24 hours. (The Lee Plan no longer has a Map 15 and the current evacuation routes are identified in Lee Plan Map 3J which identifies both Daniels Parkway and SR 82 as being evacuation routes.) The proposed text amendment and concurrent planned development will be consistent with the requirements of Lee Plan Policy 95.1.3 (including Map 3J) and an ERP permit is required to be obtained for the proposed development prior to construction commencement.

Parks, Recreation, and Open Space
The non-regulatory standards described in Policy 95.1.3(6)(a & b) require six (6) acres of developed regional park land open for public use per 1,000 total seasonal county population for all of Lee County and .8 acres of developed community park land open for public use per 1,000 unincorporated Lee County permanent population.

Regional Parks Level of Service
867,000 [seasonal county population] X (6 acres/1,000 population) = 5,202 acres
The 2020 Lee County Concurrency Report indicates that there are a total required 5,202 acres of regional parks and that the available capacity lists 7,051 acres of regional parks therefore there is available capacity to meet the adopted LOS standard.

Additionally, the 2021 Concurrency Report states that the existing inventory meets the regional park level-of-service standard in the County for the year 2020 and will continue to do so at least through the next five years of the capital improvement plan (CIP).

Community Parks Level of Service
361,315 [permanent unincorporated county population] X (0.8 acres/1,000 population) = 289 acres

The 2021 Lee County Concurrency Report indicates that there are a total required 289 acres of community parks and that the available capacity lists 832 acres of community parks therefore there is available capacity to meet the adopted LOS standard.

Additionally, the 2021 Concurrency Report states that the existing inventory meets the regional park level-of-service standard in the County for the year 2020 and will continue to do so at least through the next five years of the capital improvement plan (CIP).

SFWMD WETLAND DETERMINATION

SOUTH FLORIDA WATER MANAGEMENT DISTRICT

May 9, 2022

** Delivered via email*

Barry Ernst *
Lennar Homes LLC
10481 Six Mile Cypress Pkwy
Fort Myers, FL 33966

Subject: Daniels Parkway South
Petition for Formal Determination of Wetlands and Surface Waters
Permit No. 36-107020-P
Application No. 211115-32173
Lee County

Your petition for a formal determination of wetlands and other surface waters is approved. This action is taken based on Chapter 373, Part IV of Florida Statutes (F.S.) and the rules in Chapters 62-330 and 62-340, Florida Administrative Code (F.A.C.). Please read this entire agency action thoroughly and understand its contents.

This action is subject to:

- Not receiving a filed request for a Chapter 120, F.S., administrative hearing.
- All referenced Exhibits.

Should you object to these conditions, please refer to the attached "Notice of Rights" which addresses the procedures to be followed if you desire a public hearing or other review of the proposed agency action. Please contact this office if you have any questions concerning this matter. If we do not hear from you in accordance to the "Notice of Rights", we will assume that you concur with the District's action.

CERTIFICATE OF SERVICE

I hereby certify that this Formal Wetland Determination and Notice of Rights have been mailed or electronically submitted to the addressee (and the persons listed on the attached distribution list) on May 9, 2022 in accordance with Section 120.60(3), F.S. Notice was also electronically posted on this date through a link on the home page of the District's website (www.sfwmd.gov/ePermitting).

Sincerely,

Melissa M. Lawrence, P.E.
Bureau Chief, Environmental Resource Bureau

South Florida Water Management District
Formal Wetland Determination Permit No. 36-107020-P
Date Issued: May 9, 2022

Project Name:	Daniels Parkway South
Petitioner:	Barry Ernst Lennar Homes LLC 10481 Six Mile Cypress Pkwy Fort Myers, FL 33966
Application No.	211115-32173
Location:	Lee County, See Exhibit 1
Acres:	1,233.08
Expiration Date:	May 9, 2027
Type:	Certified Survey

Project Summary

This application is for a formal determination of the landward extent of wetlands and other surface waters (OSW), pursuant to Rule 62-330.201 Florida Administrative Code (F.A.C.), for a 1,233.08 acre property known as Daniels Parkway South. The methodology used for the determination is consistent with Rule 62-340 F.A.C.

Project Site Description

The 1,233.08 acre property is located in Sections 9, 16, 17, and 21; Township 45 South; Range 26 East; Lee County, Florida. More specifically, the property is located south of S.R. 82 and east of Daniels Parkway. A Location Map is attached as Exhibit No. 1.0. The property is surrounded by S.R. 82 and Lehigh Acres to the north; low-density single family homes and undeveloped forested land including wetlands to the east; a power line easement and undeveloped land including wetlands to the south; and Daniels Parkway, a power line easement, and the Timber Creek community to the west. The existing land uses on the property include pastureland for cattle grazing and undeveloped forested uplands and wetlands. An aerial photograph depicting the inspection boundary is attached as Exhibit No. 2.0.

Formal Determination of Wetlands and Other Surface Waters

On November 15, 2021, the District received a request for a formal determination of the boundary of wetlands and OSW on a 1,233.08 acre property known as Daniels Parkway South. The landward extent of wetlands was established by Passarella & Associates, Inc. and verified by Certified Wetland Evaluator (CWE) Matt Brosious of the South Florida Water Management District on January 14, 20, and 21, 2022. Wetlands and other surface waters (OSW), as defined by Subsection 373.019(27) F.S. and Rule 62-340 F.A.C., were identified on the property. Wetlands and OSW on the property were delineated using the methods established in Rule 62-340 F.A.C.; more specifically, the wetlands were delineated using the Wetlands Definition, and A, B and D tests. Wetlands delineated on the property totaled 532.51 acres and OSW totaled 30.93 acres. A wetland and OSW line survey is attached as Exhibit Nos. 3.0 and 3.1. The wetland boundaries on-site were surveyed, while the OSW on-site were field verified using an approximate formal determination, via GPS coordinates. To meet the range of variability

criteria for approximate delineations, in Section 7.2.2(e)2(a) Applicants Handbook, Vol. I, 19 survey located points are included in the specific purpose survey for the OSW on-site; see page 22. As evidenced by the survey, the accuracy of the GPS and aerial interpreted lines compared to the survey located points is within 25 feet, thus falling within the range of variability. Wetland delineation information, including wetland data point location map, wetland data forms, and representative photographs of the wetlands and upland areas can be found in the permit file.

Wetland Description:

The wetlands identified on the property totaled 532.51 acres (Exhibit Nos. 3.0 and 3.1). Wetland habitats on the property generally consisted of hydric pine, cypress, shrub wetlands, wet prairie, freshwater marsh and hydric pasture, with varying degrees of exotic vegetation. Upland habitats adjacent to the wetlands generally included pine flatwoods, palmetto prairie, improved pasture and a power line easement. The wetlands were delineated using the Wetland Definition, A, B, and D tests.

OSW Description:

Other surface waters identified and delineated on the property totaled 30.93 acres. OSW generally consisted of remnant agricultural ditches and ditches within a historically used military installation, which is visible on the 1968 aerial photograph in the permit file.

Based on the National Resource Conservation Service (NRCS) data, the property contains ten (10) historically mapped hydric soils. The mapped hydric soils on the property included Hallandale Fine Sand, Wet (Map Unit 6), Pompano Fine Sand (Map Unit 10), Valkaria Fine Sand (Map Unit 14), Pineda-Pineda Wet Fine Sand (Map Unit 26), Pompano Fine Sand, Frequently Ponded (Map Unit 27), Malabar Fine Sand (Map Unit 34), Valkaria Fine Sand, Frequently Ponded (Map Unit 41), Malabar Fine Sand, Frequently Ponded (Map Unit 44), Floridana Sand, Frequently Ponded (Map Unit 51), Pineda Fine Sand, Frequently Ponded (Map Unit 73). A soils map is attached as Exhibit No. 4.0. Soil pit data is included within the wetland delineation data forms, which were field reviewed on January 21, 2022. Hydric soil indicators S5 (Sandy Redox) and S6 (Stripped Matrix) were observed within the wetland area.

Hydrologic Indicators observed at or near the data point locations included hydric soil indicators S5 and S6 starting at the soil surface (Hydrologic Data), algal matting on ground surface, and 0.5 inches of adventitious rooting on melaleuca trees.

This Formal Determination of Wetlands and Other Surface Waters is the District's determination of the landward extent (boundaries) of wetlands and other surface waters within the property based on the documentation submitted by the Petitioner and field application of Chapter 62-340, F.A.C. This action does not authorize any construction activities or constitute conceptual approval of any anticipated projects or activities in wetlands or other surface waters. It does not in any way establish boundaries of sovereign submerged lands, high water elevations or other elevations/ boundaries.

Pursuant to Subsection 373.421 (4), F.S., the Governing Board may revoke the Formal Wetland Determination upon a finding that the Petitioner has submitted inaccurate information to the District.

The Formal Wetland Determination shall be binding for the stated duration provided physical conditions on the property do not change so as to alter the boundaries of wetlands and other surface waters during that period.

NOTICE OF RIGHTS

As required by Chapter 120, Florida Statutes, the following provides notice of the opportunities which may be available for administrative hearing pursuant to Sections 120.569 and 120.57, Florida Statutes, or judicial review pursuant to Section 120.68, Florida Statutes, when the substantial interests of a party are determined by an agency. Please note that this Notice of Rights is not intended to provide legal advice. Some of the legal proceedings detailed below may not be applicable or appropriate for your situation. You may wish to consult an attorney regarding your legal rights.

RIGHT TO REQUEST ADMINISTRATIVE HEARING

A person whose substantial interests are or may be affected by the South Florida Water Management District's (District) action has the right to request an administrative hearing on that action pursuant to Sections 120.569 and 120.57, Florida Statutes. Persons seeking a hearing on a District decision which affects or may affect their substantial interests shall file a petition for hearing in accordance with the filing instructions set forth herein within 21 days of receipt of written notice of the decision unless one of the following shorter time periods apply: (1) within 14 days of the notice of consolidated intent to grant or deny concurrently reviewed applications for environmental resource permits and use of sovereign submerged lands pursuant to Section 373.427, Florida Statutes; or (2) within 14 days of service of an Administrative Order pursuant to Section 373.119(1), Florida Statutes. "Receipt of written notice of agency decision" means receipt of written notice through mail, electronic mail, posting, or publication that the District has taken or intends to take final agency action. Any person who receives written notice of a District decision and fails to file a written request for hearing within the timeframe described above waives the right to request a hearing on that decision.

If the District takes final agency action that materially differs from the noticed intended agency decision, persons who may be substantially affected shall, unless otherwise provided by law, have an additional point of entry pursuant to Rule 28-106.111, Florida Administrative Code.

Any person to whom an emergency order is directed pursuant to Section 373.119(2), Florida Statutes, shall comply therewith immediately, but on petition to the board shall be afforded a hearing as soon as possible.

A person may file a request for an extension of time for filing a petition. The District may grant the request for good cause. Requests for extension of time must be filed with the District prior to the deadline for filing a petition for hearing. Such requests for extension shall contain a certificate that the moving party has consulted with all other parties concerning the extension and whether the District and any other parties agree to or oppose the extension. A timely request for an extension of time shall toll the running of the time period for filing a petition until the request is acted upon.

FILING INSTRUCTIONS

A petition for administrative hearing must be filed with the Office of the District Clerk. Filings with the Office of the District Clerk may be made by mail, hand-delivery, or e-mail. Filings by facsimile will not be accepted. A petition for administrative hearing or other document is deemed filed upon receipt during normal business hours by the Office of the District Clerk at the District's headquarters in West Palm Beach, Florida. The District's normal business hours are 8:00 a.m. – 5:00 p.m., excluding weekends and District holidays. Any document received by the Office of the District Clerk after 5:00 p.m. shall be deemed filed as of 8:00 a.m. on the next regular business day.

Additional filing instructions are as follows:

- Filings by mail must be addressed to the Office of the District Clerk, 3301 Gun Club Road, West Palm Beach, Florida 33406.
- Filings by hand-delivery must be delivered to the Office of the District Clerk. Delivery of a petition to the District's security desk does not constitute filing. It will be necessary to request that the District's security officer contact the Office of the District Clerk. An employee of the District's Clerk's office will receive and process the petition.
- Filings by e-mail must be transmitted to the Office of the District Clerk at clerk@sfwmd.gov. The filing date for a document transmitted by electronic mail shall be the date the Office of the District Clerk receives the complete document.

INITIATION OF ADMINISTRATIVE HEARING

Pursuant to Sections 120.54(5)(b)4. and 120.569(2)(c), Florida Statutes, and Rules 28-106.201 and 28-106.301, Florida Administrative Code, initiation of an administrative hearing shall be made by written petition to the District in legible form and on 8 1/2 by 11 inch white paper. All petitions shall contain:

1. Identification of the action being contested, including the permit number, application number, District file number or any other District identification number, if known.
2. The name, address, any email address, any facsimile number, and telephone number of the petitioner, petitioner's attorney or qualified representative, if any.
3. An explanation of how the petitioner's substantial interests will be affected by the agency determination.
4. A statement of when and how the petitioner received notice of the District's decision.
5. A statement of all disputed issues of material fact. If there are none, the petition must so indicate.
6. A concise statement of the ultimate facts alleged, including the specific facts the petitioner contends warrant reversal or modification of the District's proposed action.
7. A statement of the specific rules or statutes the petitioner contends require reversal or modification of the District's proposed action.
8. If disputed issues of material fact exist, the statement must also include an explanation of how the alleged facts relate to the specific rules or statutes.
9. A statement of the relief sought by the petitioner, stating precisely the action the petitioner wishes the District to take with respect to the District's proposed action.

MEDIATION

The procedures for pursuing mediation are set forth in Section 120.573, Florida Statutes, and Rules 28-106.111 and 28-106.401–.405, Florida Administrative Code. The District is not proposing mediation for this agency action under Section 120.573, Florida Statutes, at this time.

RIGHT TO SEEK JUDICIAL REVIEW

Pursuant to Section 120.68, Florida Statutes, and in accordance with Florida Rule of Appellate Procedure 9.110, a party who is adversely affected by final District action may seek judicial review of the District's final decision by filing a notice of appeal with the Office of the District Clerk in accordance with the filing instructions set forth herein within 30 days of rendition of the order to be reviewed, and by filing a copy of the notice with the appropriate district court of appeals via the Florida Courts E-Filing Portal.

INTRODUCTION

An environmental assessment was conducted on Daniels Parkway South (Project) to document existing land uses and vegetative cover; document the presence of state jurisdictional wetlands; research potential utilization by wildlife and plant species listed by the Florida Fish and Wildlife Conservation Commission (FWCC), the Florida Department of Agriculture and Consumer Services (FDACS), and the U.S. Fish and Wildlife Service (USFWS) as Threatened, Endangered, or Species of Special Concern; and document listed species utilization within the Project site. The assessment included field surveys to map vegetation communities, an office review of agency records for documented occurrences of listed species on the property, and field surveys to document listed species utilization within the Project. This report summarizes the results of the environmental assessment.

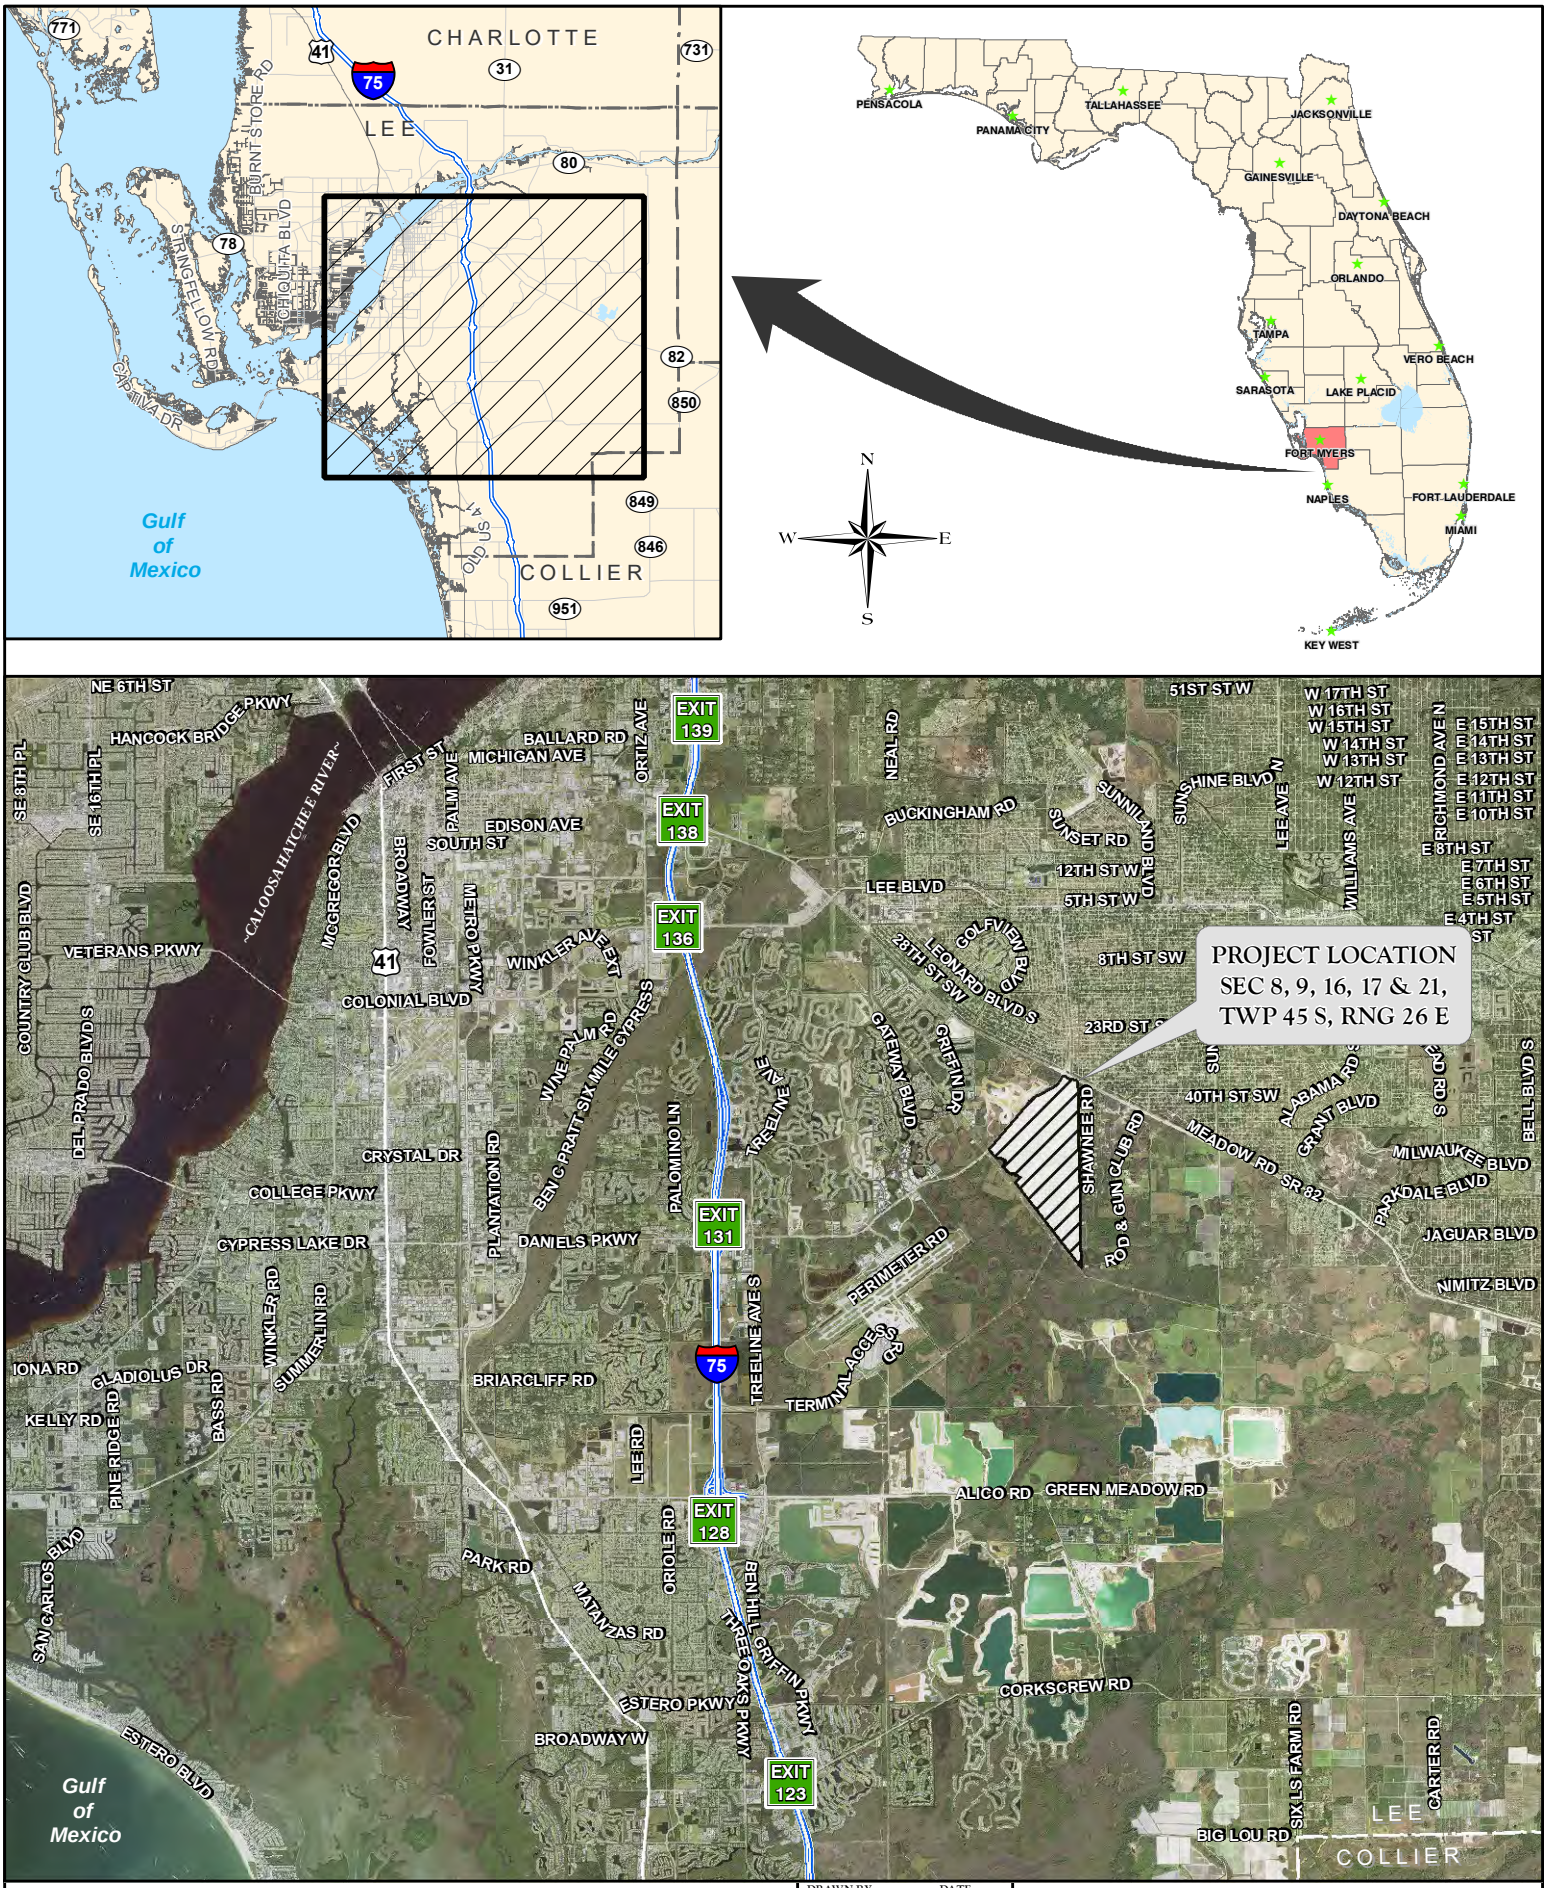

The Project totals 1,233.08± acres and is located in Sections 8, 9, 16, 17, and 21; Township 45 South; Range 26 East; Lee County (Figure 1). The site is bordered to the north by Daniels Parkway, to the east by single-family residential development and undeveloped land, to the west by a Florida Power & Light (FPL) transmission line and undeveloped land, and to the south by Lee County's Wild Turkey Strand Preserve. (Appendix A).

The property currently consists of indigenous and non-indigenous upland and wetland habitats, ditches, and pastures that are currently being utilized for cattle grazing.

LAND USES AND VEGETATION ASSOCIATIONS

Vegetation and land cover mapping for the Project was conducted using Lee County 2020 rectified aerials. Groundtruthing of the vegetative communities was conducted in January 2020 utilizing the Florida Land Use, Cover and Forms Classification System (FLUCFCS) Levels III (Florida Department of Transportation 1999). Level IV FLUCFCS was utilized to denote disturbance and hydrologic conditions. "E" codes were used to identify levels of exotic and invasive vegetation (e.g., Brazilian pepper (*Schinus terebinthifolia*), melaleuca (*Melaleuca quinquenervia*), West Indian marsh grass (*Hymenachne amplexicaulis*), Wright's nutrush (*Scleria lacustris*), and torpedograss (*Panicum repens*)). AutoCAD Map 3D 2021 software was used to determine the acreage of each mapping area, produce summaries, and generate the FLUCFCS and Wetlands Map for the Project (Appendix B). An aerial photograph of the property with an overlay of the FLUCFCS and wetlands is provided as Appendix C.

A total of 50 vegetative and land cover types (i.e., FLUCFCS codes) were identified within the Project site. The dominant land uses on the property are improved pasture and low pasture, which together occupy 501.72± acres or 40.7 percent of the site. Ditches, berms, a cow pond, and disturbed land associated with the agricultural uses occupy 94.23± acres or approximately 7.6 percent of the site. The site contains disturbed native wetland systems including mixed wetland hardwoods, hydric pine, and freshwater marsh. The site also contains non-native wetland habitats including low pasture, hydric melaleuca, and hydric disturbed land. The on-site wetland habitats have been disturbed by ditching, cattle grazing activities, and exotic infestation. A summary of

Consulting Ecologists

the FLUCFCS codes with acreage breakdown and description of each FLUCFCS is presented in Appendix D. The Project site contains mature pine flatwoods which is considered a rare and unique upland habitat type according to the Lee County Comprehensive Plan.

SOILS

The soils for the property, per the Natural Resource Conservation Service (formerly the Soil Conservation Service), are shown on Appendix E. A brief description for each soil type per the Soil Survey of Lee County, Florida (U.S. Department of Agriculture 1984 and 2020) is presented in Appendix F.

JURISDICTIONAL WETLANDS

The jurisdictional wetlands and "other surface waters" (OSWs) by FLUCFCS code are summarized in Table 1. South Florida Water Management District (SFWMD) jurisdictional wetlands constitute a total of 532.51± acres or 43.2 percent of the Project site. SFWMD jurisdictional OSWs constitute a total of 30.93± acres or 2.5 percent of the Project site. The wetlands and OSWs limits are per SFWMD formal wetland jurisdictional determination (Permit No. 36-107020-P) issued for the Project on May 9, 2022.

Table 1. SFWMD Wetland and OSW Acreages by FLUCFCS Code

FLUCFCS Code	Description	Acreage
262	Low Pasture	27.96
4241	Melaleuca, Hydric	133.24
4281 E3	Cabbage Palm, Hydric (50-75% Exotics)	11.15
514H	Ditch, Hydric	8.14
6179 E1	Mixed Wetland Hardwoods, Disturbed (0-24% Exotics)	30.69
6179 E2	Mixed Wetland Hardwoods, Disturbed (25-49% Exotics)	1.77
6179 E3	Mixed Wetland Hardwoods, Disturbed (50-75% Exotics)	1.48
6179 E4	Mixed Wetland Hardwoods, Disturbed (76-100% Exotics)	3.35
6219 E1	Cypress, Disturbed (0-24% Exotics)	17.46
6219 E2	Cypress, Disturbed (25-49% Exotics)	48.22
6219 E3	Cypress, Disturbed (50-75% Exotics)	11.9
6219 E4	Cypress, Disturbed (76-100% Exotics)	8.66
6259 E1	Pine, Hydric, Disturbed (0-24% Exotics)	1.37
6259 E2	Pine, Hydric, Disturbed (25-49% Exotics)	11.69
6259 E3	Pine, Hydric, Disturbed (50-75% Exotics)	25.38
6259 E4	Pine, Hydric, Disturbed (76-100% Exotics)	1.72
6319 E2	Wetland Shrub, Disturbed (25-49% Exotics)	5.63
6419 E1	Freshwater Marsh, Disturbed (0-24% Exotics)	15.59
6419 E2	Freshwater Marsh, Disturbed (25-49% Exotics)	2.67
6419 E3	Freshwater Marsh, Disturbed (50-75% Exotics)	17.65

Table 1. (Continued)

FLUCFCS Code	Description	Acreage
6419 E4	Freshwater Marsh, Disturbed (76-100% Exotics)	126.88
6439 E3	Wet Prairies, Disturbed (50-75% Exotics)	7.24
6439 E4	Wet Prairies, Disturbed (76-100% Exotics)	3.37
7401	Disturbed Land, Hydric	9.30
Wetlands Total		**532.51**
OSWs		
514	Ditch	30.71
525	Cow Pond	0.22
OSWs Total		**30.93**

The prominent wetland features consist of freshwater marshes and melaleuca infested wetlands found throughout the Project site. A U.S. Geological Survey Quadrangle Map is provided as Appendix G. This map shows the location of some of the wetland systems within the Project.

LISTED SPECIES

Listed wildlife species as listed by the FWCC and the USFWS that have the potential to occur on the Project site are listed in Table 2 (FWCC 2021 and USFWS 1999). Listed plant species as listed by the FDACS and the USFWS (FDACS Chapter 5B-40) that have the potential to occur on the Project site are listed in Table 3. Information used in assessing the potential occurrence of these species included the Lee County Land Development Code, Field Guide to the Rare Plants of Florida (Chafin 2000), Atlas of Florida Vascular Plants (Wunderlin 2004), and professional experience and knowledge of the geographic region. In addition, FWCC and USFWS records for documented listed species were reviewed for listed species records on or adjacent to the property (Appendix H).

CE – Commercially Exploited
E – Endangered
T – Threatened

American Alligator (*Alligator mississippiensis*)
The American alligator could potentially occur within the ditches, open water habitats, and wetlands within the site.

Eastern Indigo Snake (*Drymarchon corais couperi*)
The Eastern indigo snake could potentially occur within the pastures and native uplands on the Project site. The Eastern indigo snake is typically found in association with populations of gopher tortoise (*Gopherus polyphemus*).

Gopher Tortoise (*Gopherus polyphemus*)
Potential habitat for gopher tortoises on the Project site includes pasture areas, upland pine (*Pinus* sp.) forest, palmetto prairies, hardwood habitats, disturbed lands, spoil areas, and berms.

Crested Caracara (*Caracara cheriway*)
Potential foraging habitat for the crested caracara on the Project site includes pasture areas and palmetto prairies. Its primary habitat in Florida is the native prairie with associated marshes, cabbage palm (*Sabal palmetto*), and cabbage palm/live oak (*Quercus virginiana*) hammocks (Rodgers *et al.* 1996).

Everglade Snail Kite (*Rostrhamus sociabilis plumbeus*)
Potential foraging habitat for the Everglade snail kite includes ditches, low pastures, freshwater marshes, and wet prairies on the Project site.

Florida Burrowing Owl (*Athene cunicularia floridana*)
Potential burrowing owl habitat exists within the improved pasture and disturbed land on the Project site.

Florida Sandhill Crane (*Grus canadensis pratensis*)
Potential foraging habitat for the Florida sandhill crane may exist within the Project's improved pastures, low pasture, palmetto prairies, freshwater marshes, wet prairies, and hydric disturbed lands. Preferred sandhill crane habitat includes prairies and shallow marshes dominated by pickerelweed (*Pontederia cordata*) and maidencane (*Panicum hemitomon*).

Little Blue Heron (*Egretta caerulea*) and Tri-Colored Heron (*Egretta tricolor*)
Potential foraging habitat for state-listed wading birds within the Project site includes the forested and herbaceous wetlands, ditches, and low pasture.

Red-Cockaded Woodpecker (*Picoides borealis*)
Potential habitat for the red-cockaded woodpecker on the Project site includes the pine flatwoods, pine, and hydric pine habitats.

Roseate Spoonbill (*Ajaia ajaja*)
Potential habitat for the roseate spoonbill on the Project site includes freshwater marsh habitats, ditches, and low pasture.

Southeastern American Kestrel (*Falco sparverius paulus*)
Potential foraging habitat for the Southeastern American kestrel on the Project site may exist within the palmetto prairies, pine flatwoods, pine, and disturbed lands. Since 1980, observations of Southeastern American kestrel in Florida have occurred primarily in sandhill or sand pine (Pinus clausa) scrub areas of North and Central Florida (Rodgers *et al.* 1996).

Wood Stork (*Mycteria americana*)
Potential wood stork foraging habitat within the Project site includes forested and herbaceous wetlands, hydric disturbed land, and ditches. Almost any wetland depression where fish tend to become concentrated, either through local reproduction by fishes or as a consequence of area drying, may be good for feeding habitat (Rodgers *et al*. 1996).

Big Cypress Fox Squirrel (*Sciurus niger avicennia*)
Potential nesting and foraging habitat for the Big Cypress fox squirrel includes the pine flatwoods, pine, hydric pine, hardwood/conifer, mixed wetland hardwoods, and hydric melaleuca. Dense interiors of mixed cypress-hardwood strands seem to be avoided by fox squirrels (Moler 1992).

Florida Black Bear (*Ursus americanus floridanus*)
Potential habitat for the Florida black bear includes the native upland and wetland forested habitats on the Project site. The USFWS and FWCC have documented occurrences of Florida black bear to the north (across State Road (SR) 82) of the Project site.

Florida Bonneted Bat (*Eumops floridanus*)
Florida bonneted bats could potentially roost within the forested upland and wetland habitats on the Project site, and/or forage over the herbaceous wetlands. The Florida bonneted bat is known to occur in cities and forested areas on both the east and west coasts of South Florida from Charlotte County to Palm Beach County (Marks and Marks 2006; Humphrey 1992).

Florida Panther (*Puma concolor coryi*)
Portions of the Project are located within the Florida panther primary and secondary zones (Kautz *et al.* 2006). Twelve telemetry points from radio-collared panthers have been recorded by the FWCC on the property (Appendix H). The Florida panther telemetry points are primarily found in the southern portion of the proposed site which will be restored and preserved. These telemetry points are from Florida Panther (FP) Nos. 257 and 173. According to the FWCC's Annual Report on the Research and Management of Florida Panthers (FWCC 2020), FP 257 is an adult female that has been documented 11 times on the Project site between March 2019 and January 2020 with a use area that includes the Lee County Port Authority Mitigation Area. FP 173 was an adult male last documented on the Project site in September 2010 and reported as dead in December 2010 as a result of pseudorabies.

A Lee County protected species survey was conducted on the Project site for ten days between May 11 and June 24, 2021. A total of one gopher tortoise, two crested caracara, one Florida sandhill crane, five wood storks, six Big Cypress fox squirrel, and Florida panther tracks were observed on the Project site during the protected species survey. The gopher tortoise, Florida sandhill crane, and Big Cypress fox squirrel are listed as threatened by the FWCC (2021). The crested caracara and wood stork are listed as federally threatened by the FWCC and the USFWS. The Florida panther is listed as federally endangered by the FWCC and the USFWS. A crested caracara nest was previously documented in the northern portion of the property. This nest was active during the 2020-2021 caracara nesting season. No other listed species nests or nesting activity were observed on the Project during the protected species survey. A summary of the listed wildlife species and their sign (i.e., tracks, nests) documented within the Project are provided in Table 4. The locations of the observed listed species and their sign are depicted in Appendix I.

FWCC – Florida Fish and Wildlife Conservation Commission
USFWS – U.S. Fish and Wildlife Service
FT – Federally Threatened
FE – Federally Endangered
ST – State Threatened
*The gopher tortoise is currently listed as a candidate species by the USFWS.

No Lee County protected plant species were observed on the property during the protected species survey. However, the giant wild pine (*Tillandsia utriculata*), common wild pine (*Tillandsia fasciculata*), Northern needleleaf (*Tillandsia balbisiana*), butterfly orchid (*Encyclia tampensis*), and rigid orchid (*Epidendrum rigidum*) were documented on the site. Although not listed as Lee County protected species, the giant wild pine, common wild pine, and rigid orchid are listed as endangered by the FDACS. The Northern needleleaf and butterfly orchid are listed by FDACS as threatened and commercially exploited, respectively. A summary of the listed plant species documented within the Project are provided in Table 5. The locations of the listed plant species observed are depicted on Appendix I.

USFWS – U.S. Fish and Wildlife Service
E – Endangered
CE – Commercially Exploited

SUMMARY

A total of 50 vegetative and land cover types (i.e., FLUCFCS codes) were identified within the Project site. SFWMD jurisdictional wetlands constitute a total of 532.51± acres or 43.2 percent of the Project site. SFWMD jurisdictional OSWs constitute a total of 30.93± acres or 2.5 percent of the Project site. The Project site contains mature pine flatwoods which is considered a rare and unique upland habitat type according to the Lee County Comprehensive Plan.

FWCC and USFWS listed species occurrence records show 12 Florida panther telemetry points on the Project site. The telemetry points are primarily located on the southern portion of the Project site. FWCC and USFWS records also show documented occurrences of Florida black bear to the north (across SR 82) of the Project site.

A Lee County protected species survey was conducted on the Project site between May 11 and June 24, 2021. Listed species were also documented during other fieldwork conducted on the Project. A total of one gopher tortoise, two crested caracara, one Florida sandhill crane, five wood storks, six Big Cypress fox squirrel, and Florida panther tracks were observed on the Project site during the protected species survey and other fieldwork. The gopher tortoise, Florida sandhill crane, and Big Cypress fox squirrel are listed as threatened by the FWCC (2021). The crested caracara and wood stork are listed as federally threatened by FWCC and USFWS. The Florida panther is listed as federally endangered by FWCC and USFWS. A crested caracara nest was previously documented in the northern portion of the property. This nest was active during the 2020-2021 caracara nesting season.

No Lee County protected plant species were observed on the property during the protected species survey. However, the giant wild pine, common wild pine, Northern needleleaf, butterfly orchid, and rigid orchid were documented on the site. Although not listed as Lee County protected species, the giant wild pine, common wild pine, and rigid orchid are listed as endangered by the FDACS. The Northern needleleaf and butterfly orchid are listed by FDACS as threatened and commercially exploited, respectively.

EXISTING LAND USE AND COVER SUMMARY TABLE AND FLUCFCS DESCRIPTIONS

DANIELS PARKWAY SOUTH
EXISTING LAND USE AND COVER SUMMARY TABLE
AND FLUCFCS DESCRIPTIONS

Table 1 provides a summary and an acreage breakdown of the existing land use and habitat cover types (i.e., Florida Land Use, Cover, and Forms Classification System (FLUCFCS) codes) found on the Daniels Road South parcel (Project), while a description of each of the FLUCFCS classifications follows.

Table 1. Existing Land Use and Cover Summary

FLUCFCS Code	Description	Acreage	Percent Total
211	Improved Pasture	473.76	38.4
262	Low Pasture	27.96	2.3
3219 E1	Palmetto Prairie, Disturbed (0-24% Exotics)	3.13	0.3
3219 E2	Palmetto Prairie, Disturbed (25-49% Exotics)	4.15	0.3
3219 E3	Palmetto Prairie, Disturbed (50-75% Exotics)	2.11	0.2
3219 E4	Palmetto Prairie, Disturbed (76-100% Exotics)	0.73	0.1
4119 E1	Pine Flatwoods, Disturbed (0-24% Exotics)	53.32	4.3
4119 E2	Pine Flatwoods, Disturbed (25-49% Exotics)	28.79	2.3
4119 E3	Pine Flatwoods, Disturbed (50-75% Exotics)	2.64	0.2
4119 E4	Pine Flatwoods, Disturbed (76-100% Exotics)	2.87	0.2
4159 E1	Pine, Disturbed (0-24% Exotics)	11.18	0.9
4159 E2	Pine, Disturbed (25-49% Exotics)	2.76	0.2
4159 E3	Pine, Disturbed (50-75% Exotics)	2.07	0.2
4159 E4	Pine, Disturbed (76-100% Exotics)	1.51	0.1
422	Brazilian Pepper	3.67	0.3
424	Melaleuca	2.93	0.2
4241	Melaleuca, Hydric	133.24	10.8
4279 E1	Live Oak, Disturbed (0-24% Exotics)	1.20	0.1
4281 E3	Cabbage Palm, Hydric (50-75% Exotics)	11.15	0.9
4349 E1	Hardwood/Conifer Mixed, Disturbed (0-24% Exotics)	6.52	0.5
4349 E2	Hardwood/Conifer Mixed, Disturbed (25-49% Exotics)	6.05	0.5
4349 E3	Hardwood/Conifer Mixed, Disturbed (50-75% Exotics)	7.39	0.6
4349 E4	Hardwood/Conifer Mixed, Disturbed (76-100% Exotics)	2.49	0.2
4389 E1	Mixed Hardwoods, Disturbed (0-24% Exotics)	4.51	0.4
514	Ditch	30.71	2.5
514 H	Ditch, Hydric	8.14	0.7
525	Cow Pond	0.22	< 0.1
6179 E1	Mixed Wetland Hardwoods, Disturbed (0-24% Exotics)	30.69	2.5
6179 E2	Mixed Wetland Hardwoods, Disturbed (25-49% Exotics)	1.77	0.1
6179 E3	Mixed Wetland Hardwoods, Disturbed (50-75% Exotics)	1.48	0.1

Table 1. (Continued)

FLUCFCS Code	Description	Acreage	Percent Total
6179 E4	Mixed Wetland Hardwoods, Disturbed (76-100% Exotics)	3.35	0.3
6219 E1	Cypress, Disturbed (0-24% Exotics)	17.46	1.4
6219 E2	Cypress, Disturbed (25-49% Exotics)	48.22	3.9
6219 E3	Cypress, Disturbed (50-75% Exotics)	11.90	1.0
6219 E4	Cypress, Disturbed (76-100% Exotics)	8.66	0.7
6259 E1	Pine, Hydric, Disturbed (0-24% Exotics)	1.37	0.1
6259 E2	Pine, Hydric, Disturbed (25-49% Exotics)	11.69	0.9
6259 E3	Pine, Hydric, Disturbed (50-75% Exotics)	25.38	2.1
6259 E4	Pine, Hydric, Disturbed (76-100% Exotics)	1.72	0.1
6319 E2	Wetland Shrub, Disturbed (25-49% Exotics)	5.63	0.5
6419 E1	Freshwater Marsh, Disturbed (0-24% Exotics)	15.59	1.3
6419 E2	Freshwater Marsh, Disturbed (25-49% Exotics)	2.67	0.2
6419 E3	Freshwater Marsh, Disturbed (50-75% Exotics)	17.65	1.4
6419 E4	Freshwater Marsh, Disturbed (76-100% Exotics)	126.88	10.3
6439 E3	Wet Prairies, Disturbed (50-75% Exotics)	7.24	0.6
6439 E4	Wet Prairies, Disturbed (76-100% Exotics)	3.37	0.3
740	Disturbed Land	6.47	0.5
7401	Disturbed Land, Hydric	9.30	0.8
743	Spoil Area	0.21	< 0.1
747	Berm	39.18	3.2
Total		**1,233.08**	**100.0**

Improved Pasture (FLUCFCS Code 211)
The canopy of this land use type is primarily open with scattered cabbage palm (*Sabal palmetto*) and melaleuca (*Melaleuca quinquenervia*). The sub-canopy contains scattered wax myrtle (*Morella cerifera*), live oak (*Quercus virginiana*), cabbage palm, and Brazilian pepper (*Schinus terebinthifolia*). The ground cover consists of bahiagrass (*Paspalum notatum*), carpetgrass (*Axonopus* sp.), broomsedge (*Andropogon virginicus*), dog fennel (*Eupatorium capillifolium*), grass-leaved goldenrod (*Euthamia graminifolia*), bermudagrass (*Cynodon dactylon*), and tropical soda apple (*Solanum viarum*).

Low Pasture (FLUCFCS Code 262)
The canopy and sub-canopy of this land use type are open. The ground cover includes torpedograss (*Panicum repens*), witchgrass (*Dichanthelium* sp.), dog fennel, marsh pennywort (*Hydrocotyle umbellata*), Wright's nutrush (*Scleria lacustris*), yellow-eyed grass (*Xyris* sp.), melaleuca, and Asiatic pennywort (*Centella asiatica*).

Palmetto Prairie, Disturbed (0-24% Exotics) (FLUCFCS Code 3219 E1)
The canopy of this habitat type is primarily open with scattered melaleuca on the edges. The sub-canopy contains saw palmetto (*Serenoa repens*) and scattered Brazilian pepper. The ground cover includes carpetgrass, chocolateweed (*Melochia spicata*), saw palmetto, and grass-leaved goldenrod.

Palmetto Prairie, Disturbed (25-49% Exotics) (FLUCFCS Code 3219 E2)
This habitat type is similar to FLUCFCS Code 3219 E1, but with 25 to 49 percent melaleuca in the sub-canopy.

Palmetto Prairie, Disturbed (50-75% Exotics) (FLUCFCS Code 3219 E3)
This habitat type is similar to FLUCFCS Code 3219 E2, but with 50 to 75 percent Brazilian pepper and melaleuca in the sub-canopy.

Palmetto Prairie, Disturbed (76-100% Exotics) (FLUCFCS Code 3219 E4)
This habitat type is similar to FLUCFCS Code 3219 E3, but with 76 to 100 percent Brazilian pepper and melaleuca in the canopy and sub-canopy.

Pine Flatwoods, Disturbed (0-24% Exotics) (FLUCFCS Code 4119 E1)
The canopy of this habitat type includes slash pine (*Pinus elliottii*) and live oak. The sub-canopy contains saw palmetto, muscadine grapevine (*Vitis rotundifolia*), slash pine, scattered laurel oak (*Quercus laurifolia*), and widely scattered wax myrtle and melaleuca. The ground cover includes bahiagrass, false fennel (*Eupatorium leptophyllum*), chocolateweed, live oak, little blue maidencane (*Amphicarpum muhlenbergianum*), muscadine grapevine, spermacoce (*Spermacoce verticillata*), broomsedge, and scattered saw palmetto.

Pine Flatwoods, Disturbed (25-49% Exotics) (FLUCFCS Code 4119 E2)
This habitat type is similar to FLUCFCS Code 4119 E1, but with 25 to 49 percent Brazilian pepper in sub-canopy.

Pine Flatwoods, Disturbed (50-75% Exotics) (FLUCFCS Code 4119 E3)
This habitat type is similar to FLUCFCS Code 4119 E2, but with 50 to 75 percent melaleuca and Brazilian pepper in the canopy and sub-canopy.

Pine Flatwoods, Disturbed (76-100% Exotics) (FLUCFCS Code 4119 E4)
This habitat type is similar to FLUCFCS Code 4119 E3, but with 76 to 100 percent melaleuca and Brazilian pepper in the canopy and sub-canopy.

Pine, Disturbed (0-25% Exotics) (FLUCFCS Code 4159 E1)
The canopy of this habitat type contains slash pine and scattered cabbage palm, live oak, and melaleuca. The sub-canopy consists of slash pine, cabbage palm, laurel oak, and widely scattered melaleuca and Brazilian pepper. The ground cover is primarily open with widely scattered spermacoce, muscadine grapevine, and carpetgrass.

Pine, Disturbed (25-49% Exotics) (FLUCFCS Code 4159 E2)
This habitat type is similar to FLUCFCS Code 4159 E1, but with 25 to 49 percent melaleuca and Brazilian pepper in the canopy and sub-canopy and spermacoce in the ground cover.

Pine, Disturbed (50-75% Exotics) (FLUCFCS Code 4159 E3)
This habitat type is similar to FLUCFCS Code 4159 E2, but with 50 to 75 percent earleaf acacia (*Acacia auriculiformis*), Java plum (*Syzygium cumini*), and Brazilian pepper in the sub-canopy and caesarweed (*Urena lobata*) in the ground cover.

Pine, Disturbed (76-100% Exotics) (FLUCFCS Code 4159 E4)
This habitat type is similar to FLUCFCS Code 4159 E3, but with 76 to 100 percent melaleuca in the canopy and sub-canopy.

Brazilian Pepper (FLUCFCS Code 422)
The canopy and sub-canopy of this habitat type contain Brazilian pepper and scattered melaleuca. The ground cover is primarily open and includes earleaf greenbrier (*Smilax auriculata*) and muscadine grapevine.

Melaleuca (FLUCFCS Code 424)
The canopy of this habitat type includes melaleuca and scattered Java plum. The sub-canopy contains Brazilian pepper, melaleuca, Java plum, and widely scattered slash pine, wax myrtle, and cabbage palm. The ground cover includes broomsedge, bahiagrass, dog fennel, spermacoce, cabbage palm, little blue maidencane, and scattered saw palmetto.

Melaleuca, Hydric (FLUCFCS Code 4241)
The canopy of this habitat type includes melaleuca. The sub-canopy contains melaleuca, Brazilian pepper, and cabbage palm. The ground cover includes little blue maidencane, broomsedge, torpedograss, sawgrass (*Cladium jamaicense*), swamp fern (*Telmatoblechnum serrulatum*), swamp flatsedge (*Cyperus ligularis*), Southern beaksedge (*Rhynchospora microcarpa*), Wright's nutrush, false hop sedge (*Carex lupuliformis*), and widely scattered maidencane (*Panicum hemitomon*).

Live Oak, Disturbed (0-24% Exotics) (FLUCFCS Code 4279 E1)
The canopy of this habitat type includes live oak and widely scattered slash pine. The sub-canopy contains scattered saw palmetto, live oak, and American beautyberry (*Callicarpa americana*). The ground cover is primarily open with scattered basketgrass (*Oplismenus* sp.) and caesarweed.

Cabbage Palm, Hydric (50-75% Exotics) (FLUCFCS Code 4281 E3)
The canopy of this habitat type includes cabbage palm. The sub-canopy contains cabbage palm, wax myrtle, and scattered melaleuca. The ground cover includes torpedograss, Wright's nutrush, little blue maidencane, saw palmetto, swamp flatsedge, Asiatic pennywort, marsh pennywort, broomsedge, and dog fennel.

Hardwood/Conifer Mixed, Disturbed (0-24% Exotics) (FLUCFCS Code 4349 E1)
The canopy of this habitat type includes slash pine, live oak, laurel oak, cabbage palm, and widely scattered melaleuca. The sub-canopy contains laurel oak, wax myrtle, Java plum, cabbage palm, slash pine, saw palmetto, live oak, Brazilian pepper, rusty staggerbush (*Lyonia ferruginea*), and widely scattered melaleuca. The ground cover includes carpetgrass, cabbage palm, muscadine grapevine, Asiatic pennywort, caesarweed, earleaf greenbrier, saw palmetto, dog fennel, broomsedge, and spermacoce.

Hardwood/Conifer Mixed, Disturbed (25-49% Exotics) (FLUCFCS Code 4349 E2)
This habitat type is similar to FLUCFCS Code 4349 E1, but with 25 to 49 percent Brazilian pepper in the sub-canopy.

Hardwood/Conifer Mixed, Disturbed (50-75% Exotics) (FLUCFCS Code 4349 E3)
This habitat type is similar to FLUCFCS Code 4349 E2, but with 50 to 75 percent Brazilian pepper in the sub-canopy and caesarweed in the ground cover.

Hardwood/Conifer Mixed, Disturbed (76-100% Exotics) (FLUCFCS Code 4349 E4)
This habitat type is similar to FLUCFCS Code 4349 E4, but with 76 to 100 percent earleaf acacia in the canopy and Brazilian pepper in the sub-canopy.

Mixed Hardwoods, Disturbed (0-24% Exotics) (FLUCFCS Code 4389 E1)
The canopy of this habitat type includes live oak, laurel oak, and scattered cabbage palm. The sub-canopy contains live oak, laurel oak, cabbage palm, and scattered myrsine (*Myrsine cubana*). The ground cover is primarily open with scattered live oak.

Ditch (FLUCFCS Codes 514)
The canopy of this land use type is open. The sub-canopy contains Brazilian pepper, cabbage palm, live oak, and slash pine along the edges. The ground cover includes dotted smartweed (*Persicaria punctata*), torpedograss, Asiatic pennywort, Gulf Coast spikerush (*Eleocharis cellulosa*), dwarf papyrus (*Cyperus haspan*), frog fruit (*Phyla nodiflora*), Mexican clover (*Richardia* sp.), and small-fruit primrose willow (*Ludwigia microcarpa*).

Ditch, Hydric (FLUCFCS Code 514H)
This habitat type is similar to FLUCFCS Code 514 with a higher prevalence of wetland vegetation species such as torpedograss.

Cow Pond (FLUCFCS Code 525)
The canopy and sub-canopy of this land use type are open. The ground cover includes scattered torpedograss along the edges.

Mixed Wetland Hardwoods, Disturbed (0-24% Exotics) (FLUCFCS Code 6179 E1)
The canopy of this habitat type includes laurel oak, cabbage palm, slash pine, and scattered bald cypress (*Taxodium distichum*). The sub-canopy contains laurel oak, myrsine, wax myrtle, Brazilian pepper, saltbush (*Baccharis halimifolia*), cabbage palm, and buckthorn (*Sideroxylon reclinatum*). The ground cover includes marsh pennywort, sawgrass, frog fruit, witchgrass, false fennel, broomsedge, little blue maidencane, climbing hempvine (*Mikania scandens*), earleaf greenbrier, Asiatic pennywort, Wright's nutrush, and gulfdune paspalum (*Paspalum monostachyum*).

Mixed Wetland Hardwoods, Disturbed (25-49% Exotics) (FLUCFCS Code 6179 E2)
This habitat type is similar to FLUCFCS Code 6179 E1, but with 25 to 49 percent melaleuca in the canopy and Brazilian pepper in the sub-canopy.

Mixed Wetland Hardwoods, Disturbed (50-75% Exotics) (FLUCFCS Code 6179 E3)
This habitat type is similar to FLUCFCS Code 6179 E2, but with 50 to 75 percent melaleuca in the canopy and Brazilian pepper in the sub-canopy.

Mixed Wetland Hardwoods, Disturbed (76-100% Exotics) (FLUCFCS Code 6179 E4)
This habitat type is similar to FLUCFCS Code 6179 E3, but with 76 to 100 percent Peruvian primrose willow (*Ludwigia peruviana*) in the sub-canopy.

Cypress, Disturbed (0-24% Exotics) (FLUCFCS Code 6219 E1)
The canopy of this habitat type includes bald cypress. The sub-canopy contains bald cypress, wax myrtle, and scattered Brazilian pepper and melaleuca. The ground cover includes sawgrass, marsh pennywort, little blue maidencane, and scattered West Indian marsh grass (*Hymenachne amplexicaulis*) and torpedograss.

Cypress, Disturbed (25-49% Exotics) (FLUCFCS Code 6219 E2)
This habitat type is similar to FLUCFCS Code 6219 E1, but with 25 to 49 percent Brazilian pepper in the sub-canopy and torpedograss and West Indian marsh grass in the ground cover.

Cypress, Disturbed (50-75% Exotics) (FLUCFCS Code 6219 E3)
This habitat type is similar to FLUCFCS Code 6219 E2, but with 50 to 75 percent Brazilian pepper and melaleuca in the canopy and sub-canopy and torpedograss and West Indian marsh grass in the ground cover.

Cypress, Disturbed (76-100% Exotics) (FLUCFCS Code 6219 E4)
This habitat type is similar to FLUCFCS Code 6219 E3, but with 76 to 100 percent melaleuca in the canopy and sub-canopy and torpedograss and West Indian marsh grass in the ground cover.

Pine, Hydric, Disturbed (0-24% Exotics) (FLUCFCS Code 6259 E1)
The canopy of this habitat type includes slash pine and widely scattered cabbage palm and melaleuca. The sub-canopy contains slash pine, wax myrtle, melaleuca, and scattered cabbage palm. The ground cover includes rush fuirena (*Fuirena scirpoidea*), little blue maidencane, gulfdune paspalum, Asiatic pennywort, sawgrass, Wright's nutrush, corkwood (*Stillingia aquatica*), jointed spikerush (*Eleocharis interstincta*), musky mint (*Hyptis alata*), yellow-eyed grass, Southern beaksedge, rayless goldenrod (*Bigelowia nudata*), and torpedograss.

Pine, Hydric, Disturbed (25-49% Exotics) (FLUCFCS Code 6259 E2)
This habitat type is similar to FLUCFCS Code 6259 E1, but with 25 to 49 percent melaleuca in the canopy and sub-canopy and Wright's nutrush and torpedograss in the ground cover.

Pine, Hydric, Disturbed (50-75% Exotics) (FLUCFCS Code 6259 E3)
This habitat type is similar to FLUCFCS Code 6259 E2, but with 50 to 75 percent melaleuca in the canopy and sub-canopy and Wright's nutrush in the ground cover.

Pine, Hydric, Disturbed (76-100% Exotics) (FLUCFCS Code 6259 E4)
This vegetation community is similar to FLUCFCS Code 6259 E3, but with 76 to 100 percent melaleuca and Brazilian pepper in the canopy and sub-canopy.

Wetland Shrub, Disturbed (25-49% Exotics) (FLUCFCS Code 6319 E2)
The canopy of this habitat type includes scattered melaleuca. The sub-canopy contains wax myrtle, saltbush, and scattered bald cypress and melaleuca. The ground cover includes little blue

maidencane, spreading beaksedge (*Rhynchospora divergens*), slender spikerush (*Eleocharis baldwinii*), Tracy's beaksedge (*Rhynchospora tracyi*), and a rush species (*Juncus* sp.).

Freshwater Marsh, Disturbed (0-24% Exotics) (FLUCFCS Code 6419 E1)
The canopy of this habitat type is primarily open with scattered bald cypress and scattered melaleuca on the edges. The sub-canopy contains scattered wax myrtle, corkwood, bald cypress, melaleuca, and widely scattered Carolina willow (*Salix caroliniana*). The ground cover includes dotted smartweed, shortleaf spike sedge (C*yperus brevifolius*), witchgrass, spikerush, sawgrass, maidencane, fireflag (*Thalia geniculata*), sand cordgrass (*Spartina bakeri*), torpedograss, pickerelweed (*Pontederia cordata*), soft rush (*Juncus effusus*), Wright's nutrush, and West Indian marsh grass.

Freshwater Marsh, Disturbed (25-49% Exotics) (FLUCFCS Code 6419 E2)
This habitat type is similar to FLUCFCS Code 6419 E1, but with 25 to 49 percent torpedograss, Wright's Nutrush, and West Indian marsh grass in the ground cover.

Freshwater Marsh, Disturbed (50-75% Exotics) (FLUCFCS Code 6419 E3)
This habitat type is similar to FLUCFCS Code 6419 E2, but with 50 to 75 percent torpedograss, Wright's nutrush, and West Indian marsh grass in the ground cover.

Freshwater Marsh, Disturbed (76-100% Exotics) (FLUCFCS Code 6419 E4)
This habitat type is similar to FLUCFCS Code 6419 E3, but with 76 to 100 percent torpedograss, Wright's Nutrush, and West Indian marsh grass in the ground cover.

Wet Prairie, Disturbed (50-75% Exotics) (FLUCFCS Code 6439 E3)
The canopy and sub-canopy of this habitat type include scattered melaleuca. The ground cover contains torpedograss, Wright's nutrush, broomsedge, and Southern beaksedge.

Wet Prairie, Disturbed (75-100% Exotics) (FLUCFCS Code 6439 E4)
This habitat type is similar to FLUCFCS Code 6439 E3, but with 76 to 100 percent torpedograss and Wright's nutrush in the ground cover.

Disturbed Land (FLUCFCS Code 740)
The canopy of this land use type is primarily open with scattered slash pine and cabbage palm. The sub-canopy contains scattered wax myrtle, slash pine, saw palmetto, and Brazilian pepper. The ground cover includes bahiagrass, chocolateweed, lovegrass (*Eragrostis* sp.), broomsedge, and dog fennel.

Disturbed Land, Hydric (FLUCFCS Code 7401)
The canopy of this land use type includes scattered melaleuca, slash pine, and laurel oak. The sub-canopy contains scattered melaleuca and wax myrtle. The ground cover includes torpedograss, yellow-eyed grass, and acute spikerush (*Eleocharis acutangula*).

Spoil (FLUCFCS Code 743)
The canopy of this land use type is open. The sub-canopy contains Brazilian pepper. The ground cover includes bahiagrass, dog fennel, and spermacoce.

Berm (FLUCFCS Code 747)

The canopy of this land use type includes live oak, cabbage palm, slash pine, melaleuca, and Brazilian pepper. The sub-canopy includes live oak, slash pine, Brazilian pepper, and saw palmetto. The ground cover contains caesarweed, muscadine grapevine, dog fennel, cabbage palm, and broomsedge.

APPENDIX E

SOILS MAP

Soil Unit	Description
6	Hallandale fine sand, wet, 0 to 2 percent slopes
10	Pompano fine sand, 0 to 2 percent slopes
11	Myakka fine sand, 0 to 2 percent slopes
14	Valkaria fine sand, 0 to 2 percent slopes
26	Pineda-Pineda, wet, fine sand, 0 to 2 percent slopes
27	Pompano fine sand, frequently ponded, 0 to 1 percent slopes
28	Immokalee sand, 0 to 2 percent slopes
33	Oldsmar sand, 0 to 2 percent slopes
34	Malabar fine sand, 0 to 2 percent slopes
41	Valkaria fine sand, frequently ponded, 0 to 1 percent slopes
44	Malabar fine sand, frequently ponded, 0 to 1 percent slopes
51	Floridana sand, frequently ponded, 0 to 2 percent slopes
63	Malabar fine sand, high, 0 to 2 percent slopes
73	Pineda fine sand, frequently ponded, 0 to 1 percent slopes

NOTES:

AERIAL PHOTOGRAPHS WERE ACQUIRED THROUGH THE LEE COUNTY PROPERTY APPRAISER'S OFFICE WITH A FLIGHT DATE OF JANUARY MAY 2020.

PROPERTY BOUNDARY PER MORRIS-DEPEW DRAWING No. 21008 - WETLAND FLAG LOCATION-CLIENT.DWG DATED JUNE 16, 2021.

ROADWAY NETWORKS WERE ACQUIRED FROM THE FLORIDA GEOGRAPHIC DATA LIBRARY WEBSITE.

SOILS MAPPING WAS ACQUIRED FROM THE UNITED STATES DEPARTMENT OF AGRICULTURE WEBSITE APRIL 2021.

SOILS SUMMARY TABLE AND DESCRIPTIONS

DANIELS PARKWAY SOUTH
SOILS SUMMARY AND DESCRIPTIONS

September 2021

Table 1. Soils Listed by the Natural Resource Conservation Service on the Project

Mapping Unit	Description
6	Hallandale Fine Sand, Wet, 0 to 2 percent slopes
10	Pompano Fine Sand, 0 to 2 percent slopes
11	Myakka Fine Sand, 0 to 2 percent slopes
14	Valkaria Fine Sand, 0 to 2 percent slopes
26	Pineda-Pineda, Wet, Fine Sand, 0 to 2 percent slopes
27	Pompano Fine Sand, frequently ponded, 0 to 1 percent slopes
28	Immokalee Sand, 0 to 2 percent slopes
33	Oldsmar Sand, 0 to 2 percent slopes
34	Malabar Fine Sand, frequently ponded, 0 to 2 percent slopes
41	Valkaria Fine Sand, frequently ponded, 0 to 1 percent slopes
44	Malabar Fine Sand, frequently ponded, 0 to 1 percent slopes
51	Floridana Sand, frequently ponded, 0 to 2 percent slopes
63	Malabar Fine Sand, High, 0 to 2 percent slopes
73	Pineda Fine Sand, frequently ponded, 0 to 1 percent slopes

6 - Hallandale Fine Sand, Wet, 0 to 2 percent slopes

This is a nearly level, poorly drained soil on low, broad flatwood areas. Slopes are smoother and range from 0 to 2 percent. Typically, the surface layer is gray fine sand and about 2 inches thick. The subsurface layer is about 5 inches thick. The substratum is very pale brown fine sand about 5 inches thick. Fractured limestone bedrock is found at a depth of 12 inches which has solution holes extending to a depth of 20 to 25 inches. These solution holes contain mildly alkaline, loamy material. In most years, under natural conditions, the water table is at a depth of less than 10 inches for 1 to 3 months. The water level recedes below the limestone for about 7 months.

10 - Pompano Fine Sand, 0 to 2 percent slopes

This is a nearly level, poorly drained soil on sloughs. Slopes are smooth to concave and range from 0 to 2 percent. Typically, the surface layer is about 4 inches thick and composed of dark gray fine sand. The underlying layers are light gray, very pale brown, or white fine sand and extend to a depth of 80 inches or more. In most years, under natural conditions, the water table is at a depth of less than 10 inches for 2 to 4 months and at a depth of 10 to 40 inches for about 6 months. The water table recedes to a depth of more than 40 inches for about 3 months. During periods of high rainfall, the soil is covered by slowly moving water for periods of about 7 to 30 days or more.

11 - Myakka Fine Sand, 0 to 2 percent slopes

This is a nearly level, poorly drained soil on broad flatwood areas. Slopes are smoother and range from 0 to 2 percent. Typically, the subsurface layer is very dark gray fine sand extending about 3 inches. The subsurface layer is fine sand about 23 inches thick. The upper 3 inches of the subsurface later is gray while the remaining 20 inches is light gray. The subsoil is a fine sand that

reaches depths of 80 inches or greater. The upper 4 inches of the subsoil is black and firm. The following 5 inches is a dark reddish-brown color and is friable. The next 17 inches of the subsoil is black and firm with the following 11 inches being dark reddish-brown. The lower 17 inches of the subsoil is a mixture of black and dark reddish-brown and is friable.

14 - Valkaria Fine Sand, 0 to 2 percent slopes

This is a nearly level, poorly drained soil on sloughs. Slopes are smooth to concave and range from 0 to 2 percent. Typically, the surface layer is about 2 inches of dark grayish brown fine sand. The subsurface layer is 5 inches of very pale brown fine sand. The subsoil is a loose fine sand extending to a depth of 80 inches or more. The upper 9 inches of the subsoil is yellow. The next 4 inches is brownish yellow. The following 6 inches is yellowish brown. The lowermost 54 inches is pale yellow, yellow, brown, and very pale brown. In most years, under natural conditions, the water table is at a depth of less than 10 inches for 1 to 3 months. It is at a depth of 10 to 40 inches for about 6 months and recedes to a depth of more than 40 inches for about 3 months. During periods of high rainfall, the soil is covered by slowly moving water for periods of about 7 to 30 days or more.

26 - Pineda-Pineda, Wet, Fine Sand, 0 to 2 percent slopes

This is a nearly level, poorly drained soil on sloughs. Slopes are smooth to slightly concave and range from 0 to 2 percent. Typically, the surface layer is about 1 inch thick and composed of black fine sand. The subsurface layer is very pale brown fine sand and about 4 inches thick. The upper portion of the subsoil is brownish yellow fine sand and about 8 inches thick. The next 10 inches is strong brown fine sand. The following 6 inches is a yellowish-brown fine sand. The next 7 inches is light gray fine sand with brownish yellow mottles. The lower portion of the subsoil is approximately 18 inches thick and light brownish gray fine sandy loam with light gray sandy intrusions. The substratum is light gray fine sand reaching a depth of 80 inches or more. In most years, under natural conditions, the water table is within 10 inches of the surface for 2 to 4 months. It is 10 to 40 inches below the surface for more than 6 months and it recedes to more than 40 inches below the surface during extended dry periods. During periods of high rainfall, the soil is covered by slowly moving water for periods of about 7 to 30 days or more.

27 - Pompano Fine Sand, frequently ponded, 0 to 1 percent slopes

This is a nearly level, poorly drained soil in depressions. Slopes are concave and less than 1 percent. Typically, the surface layer is gray fine sand about 3 inches thick. The substratum is fine sand to a depth of 80 inches or more. The upper 32 inches is light brownish gray with few, fine, faint yellowish-brown mottles. The lower 45 inches is light gray. In most years, under natural conditions, the water table is within 10 inches of the surface for 2 to 4 months and stands above the surface for about 3 months. It is 10 to 40 inches below the surface for more than 5 months.

28 - Immokalee Sand, 0 to 2 percent slopes

This is a nearly level, poorly drained soil in flatwoods areas. Slopes are smooth to convex and range from 0 to 2 percent. Typically, the surface layer is black sand about 4 inches thick. The subsurface layer is dark gray sand in the upper 5 inches and light gray sand in the lower 27 inches. The subsoil is sand to a depth of 69 inches. The upper 14 inches of the subsoil is black and firm, the next 5 inches is dark reddish brown, and the lower 14 inches is dark yellowish brown. The substratum is very pale brown sand to a depth of 80 inches or more. In most years, under natural

conditions, the water table is within 10 inches of the surface for 1 to 3 months and 10 to 40 inches below the surface for 2 to 6 months. It recedes to a depth of more than 40 inches during extended dry periods.

33 – Oldsmar Sand, 0 to 2 percent slopes

This is a nearly level, poorly drained soil on low, broad flatwoods areas. Slopes are smooth to slightly convex and range from 0 to 2 percent. Typically, the surface layer is approximately 3 inches thick and is composed of black sand. The subsurface layer is gray and light gray sand about 39 inches thick. The upper portion of the subsoil is very dark gray sand about 5 inches thick. The lower portion of the subsoil is yellowish brown, mixed light brownish gray, and brown fine sandy loam about 11 inches thick. Pale brown sand extends to a depth of 80 inches or more. In most years, under natural conditions, the water table is at a depth of less than 10 inches for 1 to 3 months. It is at a depth of 10 to 40 inches for more than 6 months, and it recedes to a depth of more than 40 inches during extended dry periods.

34 – Malabar Fine Sand, frequently ponded, 0 to 2 percent slopes

This is a nearly level, poorly drained soil on sloughs. Slopes are smooth to concave and range from 0 to 2 percent. Typically, the surface layer is a dark gray fine sand about 5 inches thick. The next 12 inches is light gray and very pale brown fine sand. Below this is a 16-inch layer of light yellowish brown fine sand with yellow mottles and a 9-inch layer of brownish yellow fine sand. The subsoil layer is gray loamy fine sand about 9 inches thick with large yellowish-brown mottles. The next 8 inches is gray fine sandy loam with large brownish yellow mottles. Below is light gray loamy fine sand with yellowish brown mottles to a depth of 80 inches or more. In most years, under natural conditions, the water table is at a depth of less than 10 inches for 2 to 4 months. The water table is at a depth of 10 to 40 inches for more than 6 months, and it recedes to a depth of more than 40 inches during extended dry periods. During periods of high rainfall, the soil is covered by a shallow layer of slowly moving water for periods of about 7 to 30 days or more.

41 - Valkaria Fine Sand, frequently ponded, 0 to 1 percent slopes

This is a nearly level, poorly drained soil in depressions. Slopes are concave and less than 1 percent. Typically, the surface layer is a dark gray fine sand about 1 inch thick. The subsurface layer is about 4 inches of light gray fine sand. The subsoil is approximately 33 inches thick and is composed of fine sand. The upper 4 inches of this layer is brownish yellow with the middle 16 inches being yellow and the remaining 13 inches being a light yellowish brown. The substratum is pale brown fine sand with few fine faint brown mottles reaching a depth of 80 inches or more. In most years, under natural conditions, the water table is within 10 inches of the surface for about 6 months. The soil is ponded for approximately 3 months. The water table is 10 to 40 inches below the surface during the remainder of the year except in extended dry periods.

44 - Malabar Fine Sand, frequently ponded, 0 to 1 percent slopes

This is a nearly level, poorly drained soil in depressions. Slopes are concave and are less than 1 percent. Typically, the surface layer is 4 inches thick. The upper 1 inch is black fine sand that is high in organic matter. The lower portion of this layer is dark gray fine sand. The subsurface layer is sand to a depth of 44 inches. The upper 3 inches of the subsurface is very pale brown. The following 11 inches are yellow iron-coated sand grains. The next 10 inches is very pale brown with common coatings of iron on the sand grains. The lower 16 inches of the subsurface is light

gray. The subsoil is 23 inches thick and contains olive gray sandy loam with dark bluish gray mottles. Underneath the subsoil lies a layer of sandy loam with marl and shell fragments. In most years, under natural conditions, the soil is ponded for approximately 4 to 6 months or more. The water table is 10 to 40 inches below the surface for 4 to 6 months.

51 - Floridana Sand, frequently ponded, 0 to 2 percent slopes

This is a nearly level, very poorly drained soil in depressions. Slopes are concave and range from 0 to 2 percent. Typically, the surface layer is black sand extending 22 inches thick. The subsurface layer is approximately 17 inches thick and made of light brownish gray sand. The subsoil is olive gray fine sandy loam reaching a depth of 54 inches. Below the subsoil is a light brownish gray sand with pockets of olive gray loamy sand. In most years, under natural conditions, the water table is above the surface for 3 to 6 months. It is 10 to 40 inches below the surface during extended dry periods.

63 - Malabar Fine Sand, High, 0 to 2 percent slopes

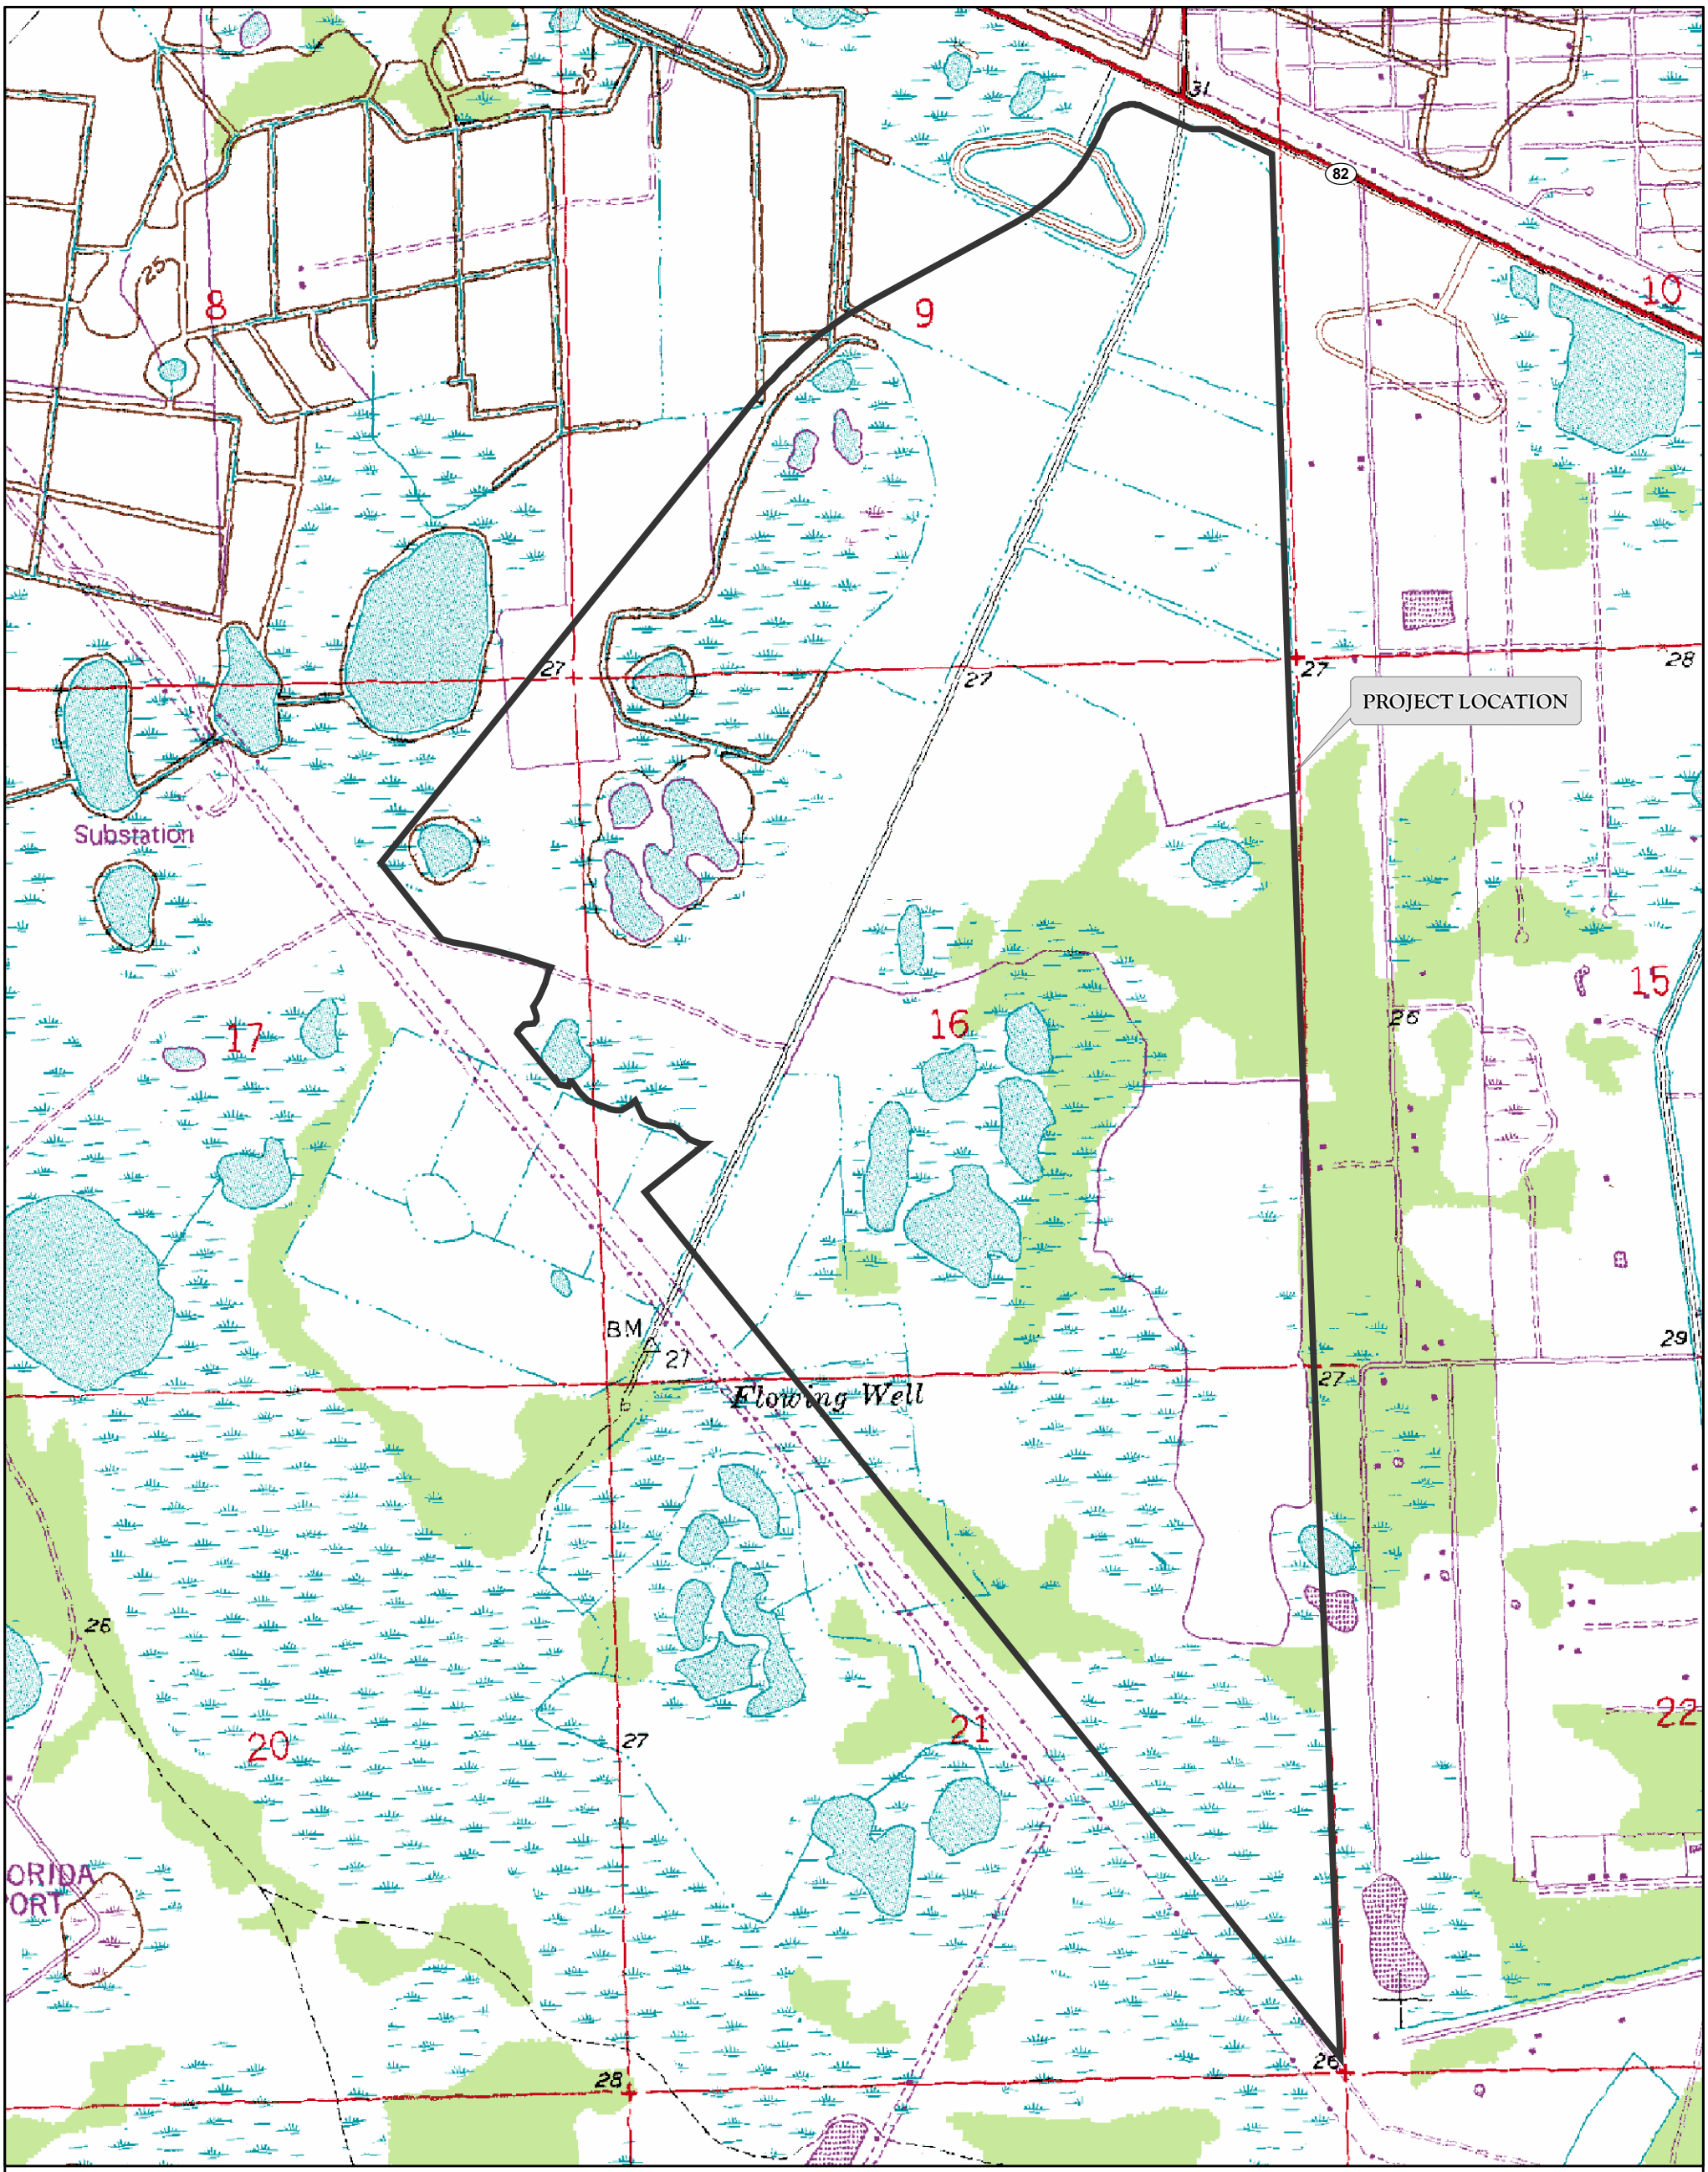

This is a nearly level, poorly drained soil in the flatwoods. Slopes are smooth to slightly convex and range from 0 to 2 percent. Typically, the surface layer is a very dark gray fine sand that extends 4 inches. The subsurface layer is about 13 inches thick and is a light gray fine sand. The subsoil is fine sand and sandy clay loam extending approximately 51 inches. The upper 7 inches of the subsoil is very pale brown fine sand with brownish yellow mottles. The next 6 inches is brownish yellow fine sand with yellowish brown mottles. Next is yellow fine sand with yellowish brown mottles, then light gray fine sand with yellowish brown mottles followed by gray sandy clay loam with yellowish brown stains along root channels. The lower 8 inches of the subsoil is greenish gray sandy clay loam. Below the subsoil region is a gray fine sand with about 60 percent shell fragments. This layer extends to a depth of 80 inches or more. In most years, under natural conditions, the water table is 10 to 40 inches below the surface for 4 to 6 months. It recedes to more than 40 inches below the surface during extended dry periods.

73 - Pineda Fine Sand, frequently ponded, 0 to 1 percent slopes

This is a nearly level, very poorly drained soil in depressions. Slopes are concave and are less than 1 percent. Typically, the surface layer is a dark gray fine sand extending 3 inches in thickness. The subsurface layer is approximately 31 inches thick and is made of fine sand. The upper 9 inches of the subsurface is light gray. The next 7 inches is very pale brown with yellowish brown mottles. The lower 12 inches of the subsurface is brownish yellow with many iron-coated sand grains. The subsoil is fine sandy loam reaching a depth of 55 inches. The upper 8 inches is gray with very pale brown sandy intrusions and yellowish-brown mottles. The lower 16 inches is gray. Below the subsoil is a light gray loamy sand that extends a depth of up to 80 inches. In most years, under natural conditions, the soil is ponded for about 3 to 6 months or more. The water table is within a depth of 10 to 40 inches for 4 to 6 months.

1.0 INTRODUCTION

The following outlines the Lee County Indigenous Preservation, Restoration, and Management Plan for Daniels Parkway South (Project). The Project site totals 1,233.08± acres and is located in Sections 8, 9, 16, 17, and 21; Township 45 South; Range 26 East; Lee County (Appendix A). The Project proposes to establish on-site conservation areas totaling approximately 679.10± acres. The proposed conservation areas will contain the following elements:

- Preservation and enhancement of 295.80± acres of indigenous wetlands and uplands (existing forested and herbaceous habitats with less than 75 percent exotics);
- Restoration of 359.60± acres of indigenous wetlands and uplands through the removal of exotic vegetation (existing forested and herbaceous habitats with greater than 75 percent exotics) and supplemental planting;
- Backfilling 6.90± acres of Other Surface Waters (OSW) and replanting with native wetland and upland vegetation; and
- Removal of 16.80± acres of berms and planting with native wetland and upland vegetation.

Thus, the Project proposes 679.10± acres of conservation area that will be placed under conservation easement with inspection, enforcement, and approval rights granted to Lee County and the South Florida Water Management District (SFWMD). The preserve areas utilized to meet the buffer requirements are depicted on Morris Depew's Master Concept Plan (MCP) which is provided under separate cover. A discussion of the buffer planting requirement is provided in Section 6.0 below. The preservation and enhancement areas include 58.1± acres of mature pine flatwoods (Florida Land Use, Cover and Forms Classification System (FLUCFCS) Codes 4119 E1 and E2) which is considered a rare and unique upland habitat type according to the Lee County Comprehensive Plan. A map showing the location of the 58.1± acres of rare and unique upland habitat is included as Appendix B.

A portion of the Project is located within the Southwest Florida International Airport (SWFIA) 10,000-Foot Hazardous Wildlife Buffer (Buffer) which includes 543.90± acres of preserve area. Table 1 below provides a summary of the preserve acreages that are within and outside of the Buffer.

Table 1. Preserve Acreage Summary

Activity Type	Acreage		
	Within Buffer	**Outside Buffer**	**Total**
Indigenous Wetland Preserve and Enhancement	181.05	24.65	**205.70**
Indigenous Wetland Restoration	229.79	71.71	**301.50**
Indigenous Upland Preserve and Enhancement	60.79	29.31	**90.10**
Indigenous Upland Restoration	53.88	4.22	**58.10**
OSW to be Restored to Indigenous Wetlands	1.77	0.73	**2.50**
OSW to be Restored to Indigenous Uplands	4.03	0.37	**4.40**
Berms to be Restored to Indigenous Wetlands	7.84	3.36	**11.20**

Table 1. (Continued)

Activity Type	Acreage		
	Within Buffer	Outside Buffer	Total
Berms to be Restored to Indigenous Uplands	4.75	0.85	**5.60**
Totals	**543.90**	**135.20**	**697.10**

Due to the Project's proximity to SWFIA, two specific management activities will be applied to preserve areas within the Buffer that are not required for preserve areas located outside the Buffer. This includes like-for-like habitat restoration and adhering to Lee County Port Authority's (LCPA) Compatible Native Landscape List. Details of these management activities are provided in Section 5.0.

2.0 EXISTING INDIGENOUS VEGETATION HABITATS

Pursuant to Land Development Code (LDC) Section 10-1, indigenous native vegetation means those plant species that are characteristic of the major plant communities of the County. Native habitats where invasive exotic vegetation has exceeded 75 percent coverage are not considered to be indigenous vegetation.

The proposed conservation areas include 295.80± acres (combined pre-development wetland and upland acres) of existing indigenous native vegetation. The indigenous areas to be preserved consist of wetland and upland forested and herbaceous habitats with less than 75 percent coverage by exotics. These indigenous areas are adjacent to improved pasture that has a perimeter berm and ditch system. An aerial with Florida Land Use, Cover, and Forms Classification System (FLUCFCS) is attached as Appendix C and depicts the existing indigenous wetland and upland vegetation communities.

The indigenous wetland habitats within the conservation areas total 205.70± acres and consist mostly of remnant cypress, hydric pine, mixed wetland hardwood habitats, and freshwater marsh. Hydric cabbage palm, wetland shrub, and wet prairies occur to a lesser extent. The indigenous uplands within the conservation areas total 90.1± acres and consist mostly of palmetto prairie, pine flatwoods, pine, cabbage palm, and hardwood/conifer, mixed habitats adjacent to the on-site wetland areas. Listed below are the FLUCFCS (Florida Department of Transportation 1999) descriptions of the indigenous wetland and upland habitats proposed for preservation and enhancement.

2.1 Indigenous Wetland Habitats

<u>Cabbage Palm, Hydric (50-75% Exotics) (FLUCFCS Code 4281 E3)</u>
The canopy of this habitat type includes cabbage palm (*Sabal palmetto*). The sub-canopy contains cabbage palm, wax myrtle (*Morella cerifera*), and scattered melaleuca (*Melaleuca quinquenervia).* The ground cover includes torpedograss (*Panicum repens*), Wright's nutrush (*Scleria lacustris*), little blue maidencane (*Amphicarpum muehlenbergianum),* saw palmetto (*Serenoa repens*), swamp flatsedge (*Cyperus ligularis*), Asiatic pennywort

(*Centella asiatica*), marsh pennywort (*Hydrocotyle umbellata*), broomsedge (*Andropogon virginicus*), and dog fennel (*Eupatorium capillifolium*).

Mixed Wetland Hardwoods, Disturbed (0-24% Exotics) (FLUCFCS Code 6179 E1)
The canopy of this habitat type includes laurel oak (*Quercus laurifolia*), cabbage palm, slash pine (*Pinus elliottii*), and scattered bald cypress (*Taxodium distichum*). The sub-canopy contains laurel oak, myrsine (*Myrsine cubana*), wax myrtle, Brazilian pepper (*Schinus terebinthifolia*), saltbush (*Baccharis halimifolia*), cabbage palm, and buckthorn (*Sideroxylon reclinatum*). The ground cover includes marsh pennywort, sawgrass (*Cladium jamaicense*), frog fruit (*Phyla nodiflora*), witchgrass (*Dichanthelium* sp.), false fennel (*Eupatorium leptophyllum*), broomsedge, little blue maidencane, climbing hempvine (*Mikania scandens*), earleaf greenbrier (*Smilax auriculata*), Asiatic pennywort, Wright's nutrush, and gulfdune paspalum (*Paspalum monostachyum*).

Mixed Wetland Hardwoods, Disturbed (25-49% Exotics) (FLUCFCS Code 6179 E2)
This habitat type is similar to FLUCFCS Code 6179 E1, but with 25 to 49 percent melaleuca in the canopy and Brazilian pepper in the sub-canopy.

Mixed Wetland Hardwoods, Disturbed (50-75% Exotics) (FLUCFCS Code 6179 E3)
This habitat type is similar to FLUCFCS Code 6179 E2, but with 50 to 75 percent melaleuca in the canopy and Brazilian pepper in the sub-canopy.

Cypress, Disturbed (0-24% Exotics) (FLUCFCS Code 6219 E1)
The canopy of this habitat type includes bald cypress. The sub-canopy contains bald cypress, wax myrtle, and scattered Brazilian pepper and melaleuca. The ground cover includes sawgrass, marsh pennywort, little blue maidencane, and scattered West Indian marsh grass (*Hymenachne amplexicaulis*), and torpedograss.

Cypress, Disturbed (25-49% Exotics) (FLUCFCS Code 6219 E2)
This habitat type is similar to FLUCFCS Code 6219 E1 but contains 25 to 49 percent Brazilian pepper in the sub-canopy and torpedograss and West Indian marsh grass in the ground cover.

Cypress, Disturbed (50-75% Exotics) (FLUCFCS Code 6219 E3)
This habitat type is similar to FLUCFCS Code 6219 E2 but contains 50 to 75 percent Brazilian pepper and melaleuca in the canopy and sub-canopy and torpedograss and West Indian marsh grass in the ground cover.

Pine, Hydric, Disturbed (0-24% Exotics) (FLUCFCS Code 6259 E1)
The canopy of this habitat type includes slash pine and widely scattered cabbage palm and melaleuca. The sub-canopy contains slash pine, wax myrtle, melaleuca, and scattered cabbage palm. The ground cover includes rush fuirena (*Fuirena scirpoidea*), little blue maidencane, gulfdune paspalum, Asiatic pennywort, sawgrass, Wright's nutrush, corkwood (*Stillingia aquatica*), jointed spikerush (*Eleocharis interstincta*), musky mint (*Hyptis alata*), yellow-eyed grass (*Xyris* sp.), Southern beaksedge (*Rhynchospora microcarpa*), rayless goldenrod (*Bigelowia nudata*), and torpedograss.

Pine, Hydric, Disturbed (25-49% Exotics) (FLUCFCS Code 6259 E2)
This habitat type is similar to FLUCFCS Code 6259 E1, but with 25 to 49 percent melaleuca in the canopy and sub-canopy and Wright's nutrush and torpedograss in the ground cover.

Pine, Hydric, Disturbed (50-75% Exotics) (FLUCFCS Code 6259 E3)
This habitat type is similar to FLUCFCS Code 6259 E2, but with 50 to 75 percent melaleuca in the canopy and sub-canopy and Wright's nutrush in the ground cover.

Wetland Shrub, Disturbed (25-49% Exotics) (FLUCFCS Code 6319 E2)
The canopy of this habitat type includes scattered melaleuca. The sub-canopy contains wax myrtle, saltbush, and scattered bald cypress and melaleuca. The ground cover includes little blue maidencane, spreading beaksedge (*Rhynchospora divergens*), slender spikerush (*Eleocharis baldwinii*), Tracy's beaksedge (*Rhynchospora tracyi*), and rush (*Juncus* sp.).

Freshwater Marsh, Disturbed (0-24% Exotics) (FLUCFCS Code 6419 E1)
The canopy of this habitat type is primarily open with scattered bald cypress and scattered melaleuca on the edges. The sub-canopy contains scattered wax myrtle, corkwood, bald cypress, melaleuca, and widely scattered Carolina willow (*Salix caroliniana*). The ground cover includes dotted smartweed (*Persicaria punctata*), shortleaf spike sedge (C*yperus brevifolius*), witchgrass, spikerush (*Eleocharis cellulosa*), sawgrass, maidencane (*Panicum hemitomon*), fireflag (*Thalia geniculata*), sand cordgrass (*Spartina bakeri*), torpedograss, pickerelweed (*Pontederia cordata*), soft rush (*Juncus effusus*), Wright's nutrush, and West Indian marsh grass.

Freshwater Marsh, Disturbed (25-49% Exotics) (FLUCFCS Code 6419 E2)
This habitat type is similar to FLUCFCS Code 6419 E1, but with 25 to 49 percent torpedograss, Wright's nutrush, and West Indian marsh grass in the ground cover.

Freshwater Marsh, Disturbed (50-75% Exotics) (FLUCFCS Code 6419 E3)
This habitat type is similar to FLUCFCS Code 6419 E2, but with 50 to 75 percent torpedograss, Wright's nutrush, and West Indian marsh grass in the ground cover.

Wet Prairies, Disturbed (50-75% Exotics) (FLUCFCS Code 6439 E3)
The canopy and sub-canopy of this habitat type include scattered melaleuca. The ground cover contains torpedograss, Wright's nutrush, broomsedge, and Southern beaksedge.

2.2 Indigenous Upland Habitats

Palmetto Prairie, Disturbed (0-24% Exotics) (FLUCFCS Code 3219 E1)
The canopy of this habitat type is primarily open with scattered melaleuca on the edges. The sub-canopy contains saw palmetto and scattered Brazilian pepper. The ground cover includes carpetgrass (*Axonopus* sp.), chocolateweed (*Melochia spicata*), saw palmetto, and grass-leaved goldenrod (*Euthamia graminifolia*).

Palmetto Prairie, Disturbed (25-49% Exotics) (FLUCFCS Code 3219 E2)
This habitat type is similar to FLUCFCS Code 3219 E1, but with 25 to 49 percent melaleuca in the sub-canopy.

Palmetto Prairie, Disturbed (50-75% Exotics) (FLUCFCS Code 3219 E3)
This habitat type is similar to FLUCFCS Code 3219 E2, but with 50 to 75 percent Brazilian pepper and melaleuca in the sub-canopy.

Pine Flatwoods, Disturbed (0-24% Exotics) (FLUCFCS Code 4119 E1)
The canopy of this habitat type includes slash pine and live oak (*Quercus virginiana*). The sub-canopy contains saw palmetto, muscadine grapevine (*Vitis rotundifolia*), slash pine, scattered laurel oak, and widely scattered wax myrtle and melaleuca. The ground cover includes bahiagrass (*Paspalum notatum*), false fennel, chocolateweed, live oak, little blue maidencane, muscadine grapevine, spermacoce (*Spermacoce verticillata*), broomsedge, and scattered saw palmetto.

Pine Flatwoods, Disturbed (25-49% Exotics) (FLUCFCS Code 4119 E2)
This habitat type is similar to FLUCFCS Code 4119 E1, but with 25 to 49 percent Brazilian pepper in the sub-canopy.

Pine Flatwoods, Disturbed (50-75% Exotics) (FLUCFCS Code 4119 E3)
This habitat type is similar to FLUCFCS Code 4119 E2, but with 50 to 75 percent melaleuca and Brazilian pepper in the canopy and sub-canopy.

Pine, Disturbed (0-24% Exotics) (FLUCFCS Code 4159 E1)
The canopy of this habitat type contains slash pine and scattered cabbage palm, live oak, and melaleuca. The sub-canopy consists of slash pine, cabbage palm, laurel oak, and widely scattered melaleuca and Brazilian pepper. The ground cover is primarily open with widely scattered spermacoce, muscadine grapevine, and carpetgrass.

Pine, Disturbed (25-49% Exotics) (FLUCFCS Code 4159 E2)
This habitat type is similar to FLUCFCS Code 4159 E1, but with 25 to 49 percent melaleuca and Brazilian pepper in the canopy and sub-canopy and spermacoce in the ground cover.

Pine, Disturbed (50-75% Exotics) (FLUCFCS Code 4159 E3)
This habitat type is similar to FLUCFCS Code 4159 E2, but with 50 to 75 percent earleaf acacia (*Acacia auriculiformis*), Java plum (*Syzgium cumini*), and Brazilian pepper in the sub-canopy and caesarweed (*Urena lobata*) in the ground cover.

Live Oak, Disturbed (0-24% Exotics) (FLUCFCS Code 4279 E1)
The canopy of this habitat type includes live oak and widely scattered slash pine. The sub-canopy contains scattered saw palmetto, live oak, and American beautyberry (*Callicarpa americana*). The ground cover is primarily open with scattered basketgrass (*Oplismenus* sp.) and caesarweed.

Hardwood/Conifer Mixed, Disturbed (0-24% Exotics) (FLUCFCS Code 4349 E1)
The canopy of this habitat type includes slash pine, live oak, laurel oak, cabbage palm, and widely scattered melaleuca. The sub-canopy contains laurel oak, wax myrtle, Java plum, cabbage palm, slash pine, saw palmetto, live oak, Brazilian pepper, rusty staggerbush (*Lyonia ferruginea*), and widely scattered melaleuca. The ground cover includes carpetgrass, cabbage palm, muscadine grapevine, Asiatic pennywort, caesarweed, earleaf greenbrier, saw palmetto, dog fennel, broomsedge, and spermacoce.

Hardwood/Conifer Mixed, Disturbed (25-49% Exotics) (FLUCFCS Code 4349 E2)
This habitat type is similar to FLUCFCS Code 4349 E1, but with 25 to 49 percent Brazilian pepper in the sub-canopy.

Hardwood/Conifer Mixed, Disturbed (50-75% Exotics) (FLUCFCS Code 4349 E3)
This habitat type is similar to FLUCFCS Code 4349 E2, but with 50 to 75 percent Brazilian pepper in the sub-canopy and caesarweed in the ground cover.

Mixed Hardwoods, Disturbed (0-24% Exotics) (FLUCFCS Code 4389 E1)
The canopy of this habitat type includes live oak, laurel oak, and scattered cabbage palm. The sub-canopy contains live oak, laurel oak, cabbage palm, and scattered myrsine (*Myrsine cubana*). The ground cover is primarily open with scattered live oak.

3.0 EXISTING NON-INDIGENOUS VEGETATION

Approximately 359.60± acres (53.2 percent) of the proposed conservation areas consist of vegetation communities that do not meet the LDC's definition of indigenous vegetation. Existing non-indigenous wetlands within the conservation areas total 301.50± acres and consist primarily of disturbed native wetland habitats with greater than 75 percent coverage by exotics, such as Brazilian pepper, melaleuca, torpedograss, and Wright's nutrush. Non-indigenous uplands within the conservation areas total 58.10± acres and consist primarily of improved pasture. Non-indigenous areas also include 6.90± acres of OSW and 16.80± acres of berms that will be removed and replanted with native wetland and upland plantings. The non-indigenous wetland and upland vegetation communities and surface waters are identified in Appendix C. Listed below are the FLUCFCS descriptions of the non-indigenous habitats on the Project site.

3.1 Non-Indigenous Wetland Habitats

Low Pasture (FLUCFCS Code 262)
The canopy and sub-canopy of this land use type are open. The ground cover includes torpedograss, witchgrass, dog fennel, marsh pennywort, Wright's nutrush, yellow-eyed grass, melaleuca, and Asiatic pennywort.

Melaleuca, Hydric (FLUCFCS Code 4241)
The canopy of this habitat type includes melaleuca. The sub-canopy contains melaleuca, Brazilian pepper, and cabbage palm. The ground cover includes little blue maidencane, broomsedge, torpedograss, sawgrass, swamp fern (*Telmatoblechnum serrulatum*), swamp

flatsedge, Southern beaksedge, Wright's nutrush, false hop sedge (*Carex lupuliformis*), and widely scattered maidencane.

Mixed Wetland Hardwoods, Disturbed (76-100% Exotics) (FLUCFCS Code 6179 E4)
This habitat type is similar to FLUCFCS Code 6179 E3, but with 76 to 100 percent Peruvian primrose willow (*Ludwigia peruviana*) in the sub-canopy.

Cypress, Disturbed (76-100% Exotics) (FLUCFCS Code 6219 E4)
This habitat type is similar to FLUCFCS Code 6219 E3, but with 76 to 100 percent melaleuca in the canopy and sub-canopy and torpedograss and West Indian marsh grass in the ground cover.

Pine, Hydric, Disturbed (76-100% Exotics) (FLUCFCS Code 6259 E4)
This habitat type is similar to FLUCFCS Code 6259 E3, but with 76 to 100 percent melaleuca and Brazilian pepper in the canopy and sub-canopy.

Freshwater Marsh, Disturbed (25-49% Exotics) (FLUCFCS Code 6419 E4)
This habitat type is similar to FLUCFCS Code 6419 E3, but with 76 to 100 percent torpedograss, Wright's nutrush, and West Indian marsh grass in the ground cover.

Wet Prairies, Disturbed (76-100% Exotics) (FLUCFCS Code 6439 E4)
This habitat type is similar to FLUCFCS Code 6439 E3, but with 76 to 100 percent torpedograss and Wright's nutrush in the ground cover.

Disturbed Land, Hydric (FLUCFCS Code 7401)
The canopy of this land use type includes scattered melaleuca, slash pine, and laurel oak. The sub-canopy contains scattered melaleuca and wax myrtle. The ground cover includes torpedograss, yellow-eyed grass, and acute spikerush (*Eleocharis acutangula*).

3.2 Non-Indigenous Upland Habitats

Improved Pasture (FLUCFCS Code 211)
The canopy of this land use type is primarily open with scattered cabbage palm and melaleuca. The sub-canopy contains scattered wax myrtle, live oak, cabbage palm, and Brazilian pepper. The ground cover consists of bahiagrass, carpetgrass, broomsedge, dog fennel, grass-leaved goldenrod, bermudagrass (*Cynodon dactylon*), and tropical soda apple (*Solanum viarum*).

Palmetto Prairie, Disturbed (76-100% Exotics) (FLUCFCS Code 3219 E4)
This habitat type is similar to FLUCFCS Code 3219 E3, but with 76 to 100 percent Brazilian pepper and melaleuca in the canopy and sub-canopy.

Pine Flatwoods, Disturbed (76-100% Exotics) (FLUCFCS Code 4119 E4)
This habitat type is similar to FLUCFCS Code 4119 E3, but contains 76 to 100 percent melaleuca and Brazilian pepper in the canopy and sub-canopy.

Pine, Disturbed (FLUCFCS Code 4159 E4)
This habitat type is similar to FLUCFCS Code 4159 E3 but with 76 to 100 percent melaleuca in the canopy and sub-canopy.

Brazilian Pepper (FLUCFCS Code 422)
The canopy and sub-canopy of this habitat type contain Brazilian pepper and scattered melaleuca. The ground cover is primarily open and includes earleaf greenbrier and muscadine grapevine.

Melaleuca (FLUCFCS Code 424)
The canopy of this habitat type includes melaleuca and scattered Java plum. The sub-canopy contains Brazilian pepper, melaleuca, Java plum, and widely scattered slash pine, wax myrtle, and cabbage palm. The ground cover includes broomsedge, bahiagrass, dog fennel, spermacoce, cabbage palm, little blue maidencane, and scattered saw palmetto.

Hardwood/Conifer Mixed, Disturbed (76-100% Exotics) (FLUCFCS Code 4349 E4)
This habitat type is similar to FLUCFCS Code 4349 E3, but with 76 to 100 percent earleaf acacia in the canopy and Brazilian pepper in the sub-canopy.

Disturbed Land (FLUCFCS Code 740)
The canopy of this land use type is primarily open with scattered slash pine and cabbage palm. The sub-canopy contains scattered wax myrtle, slash pine, saw palmetto, and Brazilian pepper. The ground cover includes bahiagrass, chocolateweed, lovegrass (*Eragrostis* sp.), broomsedge, and dog fennel.

Spoil Area (FLUCFCS Code 743)
The canopy of this land use type is open. The sub-canopy contains Brazilian pepper. The ground cover includes bahiagrass, dog fennel, and spermacoce.

Berm (FLUCFCS Code 747)
The canopy of this land use type includes live oak, cabbage palm, slash pine, melaleuca, and Brazilian pepper. The sub-canopy includes live oak, slash pine, Brazilian pepper, and saw palmetto. The ground cover contains caesarweed, muscadine grapevine, dog fennel, cabbage palm, and broomsedge.

3.3 Non-Indigenous Surface Waters

Ditch (FLUCFCS Code 514)
The canopy of this land use type is open. The sub-canopy contains Brazilian pepper, cabbage palm, live oak, and slash pine along the edges. The ground cover includes dotted smartweed (*Persicaria punctata*), torpedograss, Asiatic pennywort, Gulf Coast spikerush, dwarf papyrus (*Cyperus haspan*), frog fruit, Mexican clover (*Richardia* sp.), and small-fruit primrose willow (*Ludwigia microcarpa*).

Ditch, Hydric (FLUCFCS Code 514 H)
This habitat type is similar to FLUCFCS Code 514 H with a higher prevalence of wetland vegetation species such as torpedograss.

Cow Pond (FLUCFCS Code 525)
The canopy and sub-canopy of this land use type are open. The ground cover includes scattered torpedograss along the edges.

4.0 INDIGENOUS VEGETATION PRESERVATION AND ENHANCEMENT

A total of 295.80± acres (205.70± acres of wetlands and 90.10± acres of uplands) with less than 75 percent existing exotic vegetation will be preserved and enhanced by the hand-removal/treatment of exotic and nuisance vegetation. The locations of the indigenous preservation areas are shown on Appendix D.

4.1 Methods to Remove and Control Exotic and Nuisance Plants

Exotics to be eradicated include, but are not limited to, the 21 species of prohibited invasive exotic species listed in Section 10-420(h) of the LDC (Table 1).

Table 2. Prohibited Invasive Exotics

Common Name	Scientific Name
Air potato	*Dioscorea alata*
Australian pines	All *Casuarina* species
Bishopwood	*Bischofia javanica*
Brazilian pepper	*Schinus terebinthifolia*
Carrotwood	*Cupaniopsis anacardioides*
Chinese tallow	*Sapium sebiferum*
Cork tree	*Thespesia populnea*
Cuban laurel fig	*Ficus microcarpa*
Downy rose-myrtle	*Rhodomyrtus tomentosus*
Earleaf acacia	*Acacia auriculiformis*
Japanese climbing fern	*Lygodium japonicum*
Java plum	*Syzygium cumini*
Melaleuca	*Melaleuca quinquenervia*
Murray red gum	*Eucalyptus camaldulensis*
Old World climbing fern	*Lygodium microphyllum*
Rose apple	*Syzygium jambos*
Rosewood	*Dalbergia sissoo*

Table 2. (Continued)

Common Name	Scientific Name
Tropical soda apple	*Solanum viarum*
Wedelia	*Wedelia trilobata*
Weeping fig	*Ficus benjamina*
Woman's tongue	*Albizia lebbeck*

Exotic and nuisance vegetation removal will be conducted primarily by hand methods. Hand treatment will be either by the felling of exotic trees, hand-removal, and herbicide treatment of the tree stumps; or by hand-pulling and removal. The treatment of exotic and nuisance vegetation will include one or more of the following methods: (1) cut exotics within 12 inches of ground elevation, hand-remove cut vegetation, and treat the remaining stump with approved herbicide; (2) foliar application of approved herbicide or hand pulling of exotic seedlings; and (3) foliar application of approved herbicide to nuisance grasses.

4.2 Debris Removal

Exotic vegetative debris that is cut will be removed from the indigenous preserve areas. Exotic debris may be stacked in the adjacent agricultural lands for disposal but shall not be burned. The preserve areas will be inspected annually for trash/garbage. Any trash/garbage located within the preserve areas will be removed and disposed of by hand.

4.3 Method and Frequency of Pruning and Trimming

Exotic removal within the existing indigenous habitats is scheduled to begin after development order approval. After completing the initial exotic removal, semi-annual inspections of the preserves will occur for the first two years. During these inspections, the conservation areas will be traversed by a qualified ecologist. Locations of nuisance and/or exotic species will be identified for immediate treatment with an appropriate herbicide. Any additional potential problems will also be noted, and corrective actions will be taken. Once exotic/nuisance species levels have been reduced to acceptable limits, inspections of the conservation areas will be conducted a minimum of once every two years.

After the initial exotic removal, all subsequent exotic maintenance will be hand-removal only. Maintenance will be conducted in perpetuity to ensure that the conservation areas are free of exotic vegetation, including the prohibited invasive exotic species listed in Section 10-420(h) of the LDC (Table 1).

5.0 INDIGENOUS VEGETATION RESTORATION

Restoration and re-establishment of indigenous vegetation communities will be conducted in areas with greater than 75 percent coverage by exotic vegetation within the conservation areas. Restoration activities will include 359.60± acres of exotic removal and supplemental plantings in

existing forested and herbaceous habitats with greater than 75 percent exotics. Additionally, 6.90± acres of OSW will be backfilled and 16.80± acres of berms within the conservation areas will be removed and replanted with native wetland and upland vegetation. The locations of the various types of restoration areas are shown on Appendix D.

The restoration activities will result in the re-establishment of indigenous vegetation communities throughout the Project site. Due to the proximity to SWFIA, the restoration activities within the Buffer will include like-for-like habitat restoration to maintain similar structural characteristics within the preserve areas and minimize wildlife attractants. For example, a melaleuca forest will be replaced with native trees and an exotic-infested marsh will be replanted with herbaceous vegetation. Photographs providing examples of like-for-like habitat restoration are included as Appendix E. Plantings within the Buffer will be consistent with LCPA's Compatible Native Landscape List (Appendix F). The location of the Buffer is shown on Appendix D. In addition to the re-establishment of indigenous vegetation, extensive berm removal activities will restore the hydrologic connectivity that historically existed among the on-site wetland communities.

5.1 Removal of Exotics and Supplemental Plantings

Approximately 359.60± acres (301.50± acres of wetlands and 58.10± acres of uplands) with greater than 75 percent exotics will be enhanced by removing exotic species and supplemental plantings of native vegetation. This includes 229.79± acres of wetlands and 53.88± acres of upland located within the Buffer that will be subjected to like-for-like habitat restoration and compliance with LCPA's Compatible Native Landscape List. Mechanical equipment may be utilized to assist in the removal of exotic species in these areas. The mechanical removal areas will be flagged in the field and approved by Lee County Department of Community Development (DCD) staff prior to issuance of a vegetation removal permit. Cut vegetative debris will be removed from these areas to allow for successful supplemental plantings. All efforts will be made to preserve native trees when conducting the exotic removal with mechanized equipment. To minimize adverse impacts to the ground surface, machinery that exerts a relatively low impact on the ground surface (i.e., tracked skid steer, feller-buncher) will be utilized within the mechanical removal areas. To prevent ground disturbance, mechanical equipment will not be utilized in areas of the preserve that are saturated or inundated. If rutting occurs, the ground surface will be restored to natural grade with the use of low impact equipment or by hand methods such as raking.

Following the removal of exotics, supplemental wetland plantings will be installed in the 301.50± acres of wetland habitats. Wetland plantings will be selected based on the type of native vegetation that occurs in the adjacent or nearby wetland habitats. Tree and ground cover species will be planted according to the specifications in Table 2. A minimum of three tree species and three ground cover species will be planted. The species selected for planting will depend on market availability at the time the plantings are to occur. Additional tree and ground cover species may be included in the planting table with approval from Lee County staff.

Plant material installed in wetland restoration areas located within the Buffer (229.79± acres) will adhere to the LCPA Compatible Native Landscape List (Appendix F).

Table 3. Supplemental Wetland Plantings[1]

Common Name	Scientific Name	Minimum Height	Container Size	Planting Instruction (On Center)
Trees (minimum three species)				
Bald cypress*	*Taxodium distichum*	2 to 5 ft.	BR to 3 gal.	20 ft.
Dahoon holly (male only)*	*Ilex cassine*	2 to 5 ft.	BR to 3 gal.	20 ft.
Laurel oak*	*Quercus laurifolia*	2 to 5 ft.	BR to 3 gal.	20 ft.
Pond apple	*Annona glabra*	2 to 5 ft.	BR to 3 gal.	20 ft.
Pop ash	*Fraxinus caroliniana*	2 to 5 ft.	BR to 3 gal.	20 ft.
Red maple	*Acer rubrum*	2 to 5 ft.	BR to 3 gal.	20 ft.
Slash pine*	*Pinus elliottii* var. *densa*	2 to 5 ft.	BR to 3 gal.	20 ft.
Swamp bay*	*Persea palustris*	2 to 5 ft.	BR to 3 gal.	20 ft.
Ground Cover (minimum three species)				
Alligator flag*	*Thalia geniculata*	12 in.	2 in.	3 to 5 ft.
Arrowhead	*Sagittaria lancifolia*	12 in.	2 in.	3 to 5 ft.
Blue maidencane	*Amphicarpum muhlenbergianum*	12 in.	2 in.	3 to 5 ft.
Dense-flower knotweed	*Polygonum glabrum*	12 in.	2 in.	3 to 5 ft.
Fakahatchee grass*	*Tripsacum dactyloides*	12 in.	2 in.	3 to 5 ft.
Golden canna	*Canna flaccida*	12 in.	2 in.	3 to 5 ft.
Gulfdune paspalum	*Paspalum monostachyum*	12 in.	2 in.	3 to 5 ft.
Maidencane	*Panicum hemitomon*	12 in.	2 in.	3 to 5 ft.
Muhly grass*	*Muhlenbergia capillaris*	12 in.	2 in.	3 to 5 ft.
Pickerelweed	*Pontederia cordata*	12 in.	2 in.	3 to 5 ft.
Sand cordgrass*	*Spartina bakeri*	12 in.	2 in.	3 to 5 ft.
Sawgrass	*Cladium jamaicense*	12 in.	2 in.	3 to 5 ft.
Soft-stem bulrush	*Scirpus validus*	12 in.	2 in.	3 to 5 ft.
Spikerush*	*Eleocharis interstincta*	12 in.	2 in.	3 to 5 ft.
Swamp lily	*Crinum americanum*	12 in.	2 in.	3 to 5 ft.
Wiregrass*	*Aristida stricta*	12 in.	2 in.	3 to 5 ft.

BR – Bare root
[1]Plantings to be installed in Indigenous Wetland Restoration (301.50± acres)
*Compatible with LCPA plant list.

Following the removal of exotic vegetation, supplemental upland plantings will be installed in 58.10± acres of upland habitats. Upland plantings will be selected to replace the type of native vegetation that occurs in the adjacent or nearby upland habitats. Tree plantings will include primarily slash pine, although other tree species listed in Table 3 may be utilized. Upland tree and ground cover plantings will be installed according to the specifications listed in Table 3. A minimum of two tree species and three ground cover species will be planted. The species selected for planting will depend on market availability at the time the

plantings are to occur. Additional tree and ground cover species may be included in the planting table with approval from Lee County staff.

Plant material installed in upland restoration areas located within the Buffer (53.88± acres) will adhere to the LCPA Compatible Native Landscape List (Appendix F).

Table 4. Supplemental Upland Plantings[1]

Common Name	Scientific Name	Minimum Height	Minimum Container Size	Planting Instruction (On Center)
Trees (minimum two species)				
Laurel oak*	*Quercus laurifolia*	2 to 5 ft.	BR to 3 gal.	20 ft.
Live oak	*Quercus virginiana*	2 to 5 ft.	BR to 3 gal.	20 ft.
Slash pine*	*Pinus elliottii* var. *densa*	2 to 5 ft.	BR to 3 gal.	20 ft.
Ground Cover (minimum three species)				
Blue maidencane	*Amphicarpum muhlenbergianum*	12 in.	2 in.	3 to 5 ft.
Broomsedge	*Andropogon virginicus*	12 in.	2 in.	3 to 5 ft.
Fakahatchee grass*	*Tripsacum dactyloides*	12 in.	2 in.	3 to 5 ft.
Gulfdune paspalum	*Paspalum monostachyum*	12 in.	2 in.	3 to 5 ft.
Muhly grass*	*Muhlenbergia capillaris*	12 in.	2 in.	3 to 5 ft.
Sand cordgrass*	*Spartina bakeri*	12 in.	2 in.	3 to 5 ft.

Wiregrass*	*Aristida stricta*	12 in.	2 in.	3 to 5 ft.

[1]Plantings to be installed in Indigenous Upland Restoration (58.10± acres)
*Compatible with LCPA planting list.
BR – Bare root

5.2 OSW Backfilling, Berm Removal, and Supplemental Plantings

Historic aerials show the property was formerly used for agricultural operations. As part of the historic agricultural surface water management, an extensive network of ditches and berms have been constructed on the property which has led to the partitioning of wetland systems within the site. This includes a historic farm road that bisects the site and precludes hydrologic connectivity between wetland systems located in the northern and southern portions of the property. This road has been used by the SFWMD to represent the dividing line between the Estero River and Six Mile Cypress sub-watersheds.

To restore the hydrologic connectivity that historically existed among the on-site wetland communities, 16.80± acres of berms will be removed and 6.90± acres of OSW (i.e., agricultural ditches) will be backfilled using the berm material. This includes 13.7± acres of OSW and berm material that will be restored to wetlands and 10± acres of OSW and berm material that will be restored to uplands. Of the 13.7± acres of OSW and berm that will be restored to wetlands, 9.61± acres are located within the Buffer and will be subjected to like-for-like habitat restoration and compliance with LCPA's Compatible Native Landscape List (Appendix F). Similarly, of the 10± acres of OSW and berm that will be

restored to uplands, 8.78± acres located within the Buffer will be subjected to like-for-like habitat restoration and compliance with LCPA's Compatible Native Landscape List (Appendix F). These areas will be regraded to match adjacent natural grade and planted with native vegetation according to the specifications listed in Tables 2 and 3.

The proposed hydrologic restoration activities are designed to reconnect the Project's wetland systems and are not anticipated to increase wetland hydroperiods. Activities that could increase wetland hydroperiods, such as excavating/lowering the ground surface or creating impoundments, are not proposed as they could potentially attract hazardous wildlife. The main objective of the hydrologic restoration is to facilitate the north to south flow of water through the Project site that existed historically while maintaining existing wetland hydroperiods. It is anticipated that cypress and freshwater marsh systems will maintain long hydroperiods (approximately 180-270 days) while hydric pine and mixed wetland hardwood hammocks will maintain short hydroperiods (approximately 30-60 days), consistent with SFWMD habitat characterizations (SFWMD 2007).

A flow path will be established in the central portion of the site which will facilitate a hydrologic connection between the Estero River and Six Mile Cypress sub-watersheds. Per coordination with LCPA staff, the flow path was designed to be a closed (i.e., piped with no open standing water) system so it would not function as a wildlife attractant. The location of the flow path is shown on Appendix D. A cross-section showing how the flow path is intended to function is provided as Appendix G. The flow path will connect two short hydroperiod wetland habitat types (i.e., hydric pine and mixed wetland hardwoods); therefore, hydrologic connection between these systems is anticipated to occur only during peak wetland water levels or after large storm events.

6.0 BUFFER REQUIREMENTS

The MCP indicates that portions of the indigenous preserve and restoration areas will be utilized to meet Type D buffer requirements. The Type D buffer area is approximately 1,320 linear feet; therefore, this area must contain 66 trees and 872 shrubs per LDC requirements. If sufficient native vegetation does not exist within the preserve area to meet the Type D requirement, tree and shrub plantings will be installed in accordance with Table 5. Plant material installed will adhere to the LCPA Compatible Native Landscape List (Appendix F).

Table 5. Buffer Plantings

Common Name	Scientific Name	Minimum Height	Container Size
Wetland Trees[1]			
Bald cypress*	*Taxodium distichum*	10 ft.	15 gal.
Dahoon holly (male only)*	*Ilex cassine*	10 ft.	15 gal.
Laurel oak*	*Quercus laurifolia*	10 ft.	15 gal.
Pond apple	*Annona glabra*	10 ft.	15 gal.
Pop ash	*Fraxinus caroliniana*	10 ft.	15 gal.

Table 5. (Continued)

Common Name	Scientific Name	Minimum Height	Container Size
Wetland Trees[1]			
Red maple	*Acer rubrum*	10 ft.	15 gal.

Swamp bay*	*Persea palustris*	10 ft.	15 gal.
Wetland Shrubs			
Pitchapple*	*Clusia rosea*	24 in.	3 gal.
Wax myrtle	*Myrica cerifera*	24 in.	3 gal.
Gallberry*	*Ilex glabra*	24 in.	3 gal.
Myrsine*	*Myrsine cubana*	24 in.	3 gal.
Buttonbush	*Cephalanthus occidentalis*	24 in.	3 gal.
Cocoplum	*Chrysobalanus icaco*	24 in.	3 gal.
Upland Trees			
Laurel oak*	*Quercus laurifolia*	10 ft.	15 gal.
Live oak	*Quercus virginiana*	10 ft.	15 gal.
Slash pine*	*Pinus elliottii* var. *densa*	10 ft.	15 gal.
Upland Shrubs			
Wax myrtle	*Myrica cerifera*	24 in.	3 gal.
Pitchapple*	*Clusia rosea*	24 in.	3 gal.
Bahama cassia*	*Cassia bahamensis*	24 in.	3 gal.
Gallberry*	*Ilex glabra*	24 in.	3 gal.
Rusty lyonia*	*Lyonia ferruginea*	24 in.	3 gal.
Firebush*	*Hamelia patens*	24 in.	3 gal.
Saw palmetto*	*Serenoa repens*	24 in.	3 gal.
Myrsine*	*Myrsine cubana*	24 in.	3 gal.
Cocoplum	*Chrysobalanus icaco*	24 in.	3 gal.

[1]Tree Plantings must have a minimum four-foot spread and two-inch caliper width.
*Compatible with LCPA planting list.

7.0 RESTORATION ACTIVITY SCHEDULE

Site development and restoration may occur in phases. Details of phasing will be addressed at the time of Development Order. Restoration activities in each phase (e.g., Phases 1, 2, etc.) will be completed within ten years or sooner from the date of issuance of the first development order for that phase. The initial Development Order must include all indigenous vegetation preservation, enhancement, and restoration, and hydrologic restoration to support the phased site plan and corresponding density.

8.0 SUCCESS CRITERIA

8.1 Indigenous Wetland and Upland Preservation and Enhancement

The following are the success criteria for the indigenous preserve areas:

1) Initial eradication of exotic and nuisance vegetation will be completed; and
2) The preserve areas will be maintained free from exotic vegetation. Exotic vegetation species include, but are not limited to, the 21 species of prohibited invasive exotic species listed in Section 10-420(h) of the LDC (Table 1).

8.2 Indigenous Wetland and Upland Restoration

The following are the success criteria for the indigenous wetland and upland restoration areas:

1) Initial eradication of exotic and nuisance vegetation will be completed;
2) Removal of berms and backfilling of ditches will be completed;
3) Supplemental plantings will be completed in the indigenous restoration areas;
4) A minimum 80 percent survival of tree and ground cover plantings after five years; and
5) The preserve areas will be maintained free from exotic vegetation. Exotic vegetation species include, but are not limited to, the 21 species of prohibited invasive exotic species listed in Section 10-420(h) of the LDC (Table 1).

9.0 MAINTENANCE

After completing the initial exotic removal, semi-annual inspections of the conservation areas will occur for the first two years. During these inspections, the conservation areas will be traversed by a qualified ecologist. Locations of nuisance and/or exotic species will be identified for immediate treatment with an appropriate herbicide. Any additional potential problems will also be noted, and corrective actions will be taken. Once exotic/nuisance species levels have been reduced to acceptable limits, inspections of the conservation areas will be conducted annually.

After the initial exotic removal, all subsequent exotic maintenance will be hand-removal only. Maintenance will be conducted in perpetuity to ensure that the conservation areas are free of exotic vegetation, including the prohibited invasive exotic species listed in Section 10-420(h) of the LDC (Table 1).

10.0 MONITORING REPORTS

Monitoring will be conducted annually for the conservation areas. Annual reports documenting the achievement of the success criteria outlined in Section 8.0 will be submitted to Lee County DCD staff. Annual monitoring reports will be provided for five years after the Certificate of Compliance has been issued by the DCD or until 80 percent survivability is reached. Monitoring

will typically be conducted during the height of the growing season (August to October), with annual reports submitted by January 15. The timing of monitoring may be adjusted based on environmental conditions.

Annual monitoring reports will be provided as described above. The monitoring reports will include documented exotic and nuisance species, mortality of vegetation, estimated causes of mortality, growth of the vegetation, wildlife observed, photographs, and factors that demonstrate the functional health of the conservation areas. A brief description of anticipated maintenance work to be conducted over the next year will also be included. Periodic inspections will be conducted by DCD staff to ensure the accuracy of the monitoring reports.

11.0 LONG-TERM MANAGEMENT AND MONITORING

The conservation areas will be placed in a conservation easement granted to Lee County and the SFWMD with third-party enforcement rights to the Florida Department of Environmental Protection and U.S. Fish and Wildlife Service. The conservation easement will prevent the encroachment of future development as well as activities that are incompatible with the goal of sustaining the preserved and restored conservation areas in good ecological health. Responsibility for long-term management of the conservation areas will shift to the Community Development District or Homeowners' Association following the completion of enhancement and restoration activities on-site. Long-term management of exotic and nuisance vegetation, debris removal, and methods and frequency of trimming and pruning will adhere to the requirement outlined in Section 4.0 of this plan.

12.0 PRESERVE SIGNAGE AND COMMUNITY EDUCATION PLAN

Signs identifying the preserve as a "nature preserve area" will be installed along the boundary of the conservation areas. The signage will include language stating, "No dumping allowed." The signs will be spaced a maximum of 300 feet apart. The signs will be no closer than ten feet from residential property lines and be limited to a maximum height of four feet and a maximum size of two square feet. A typical preserve sign is attached as Appendix H.

Community informational and educational brochures, such as those describing the benefits of preserve areas, may be created and provided as needed to keep residents in compliance with conservation easements, wildlife regulations, etc. Continued education will ensure that the community is well-informed regarding the preserves and wildlife coexistence. A separate Protected Species Management and Human-Wildlife Coexistence Plan has been prepared to address human-wildlife conflicts.

LIKE-FOR-LIKE HABITAT RESTORATION EXAMPLES

Pre-restoration forested habitat containing dense exotic melaleuca trees.

Post-restoration forested habitat containing LCPA-compatible native cypress trees.

Pre-restoration freshwater marsh habitat containing a monoculture of exotic torpedograss.

Post-restoration freshwater marsh habitat containing a mixture of LCPA-compatible native ground cover species (e.g., alligator flag, spikerush, cordgrass).

APPENDIX F

LCPA COMPATIBLE AND NON-COMPATIBLE PLANT LIST

LCPA Compatible and Non-Compatible Plant List

LCPA worked in conjunction with a Federal Aviation Administration (FAA) Qualified Airport Wildlife Biologist and local landscape architects to develop compatible and incompatible plant lists. In general, the goal is to reduce or eliminate landscaping materials that would provide food, water, or shelter and/or a combination of these basic needs that attract either large flocks of birds or birds that pose a high risk to aviation. For example, flocks of blackbirds, large raptors, flocks of ducks, large wading birds, or flocks of shorebirds could pose a high risk to aviation.

The landscape list categories are described below and a list of species for each category is provided in Table 1. The table provides a breakdown of each category by native and non-native trees/palms, shrubs, and grasses/groundcovers that are suitable for the southwest Florida environment. Please note that this list is provided for guidance only. Exception may be warranted due to additional requirements or site specific constraints.

Compatible – Group 1

Plant materials listed under this category are not known to attract high risk species or flocking birds. While all plants have the ability to provide some type of attractant to wildlife (including prey base for hazardous species), Group 1 species are considered compatible and can be used in any number, density, or arrangement. If a wildlife hazard attractant arises that could pose a threat to aviation, LCPA will work with Lee County staff and the landowner to determine if measures could be put in place to reduce the attractant.

Compatible – Group 2

Plant materials listed under this category may attract high risk species or flocking birds under certain circumstances. No large groupings of these species should be utilized in an effort to minimize their attractiveness to wildlife. The allowable size grouping of these species will vary based on the site setting and should be reviewed on a case by case basis. The corresponding note to the Group 2 species in Table 1 will explain restrictions or guidance on using the plant materials. If these plants are planned for use, LCPA staff should be included in review of the landscape plan. If a wildlife hazard attractant arises that could pose a threat to aviation, LCPA will work with Lee County staff and the landowner to determine if measures could be put in place to reduce the attractant.

Non-Compatible

Plant materials listed under this category are known to attract high risk species or flocking birds. Species on this list are not recommended for use.

1.0 INTRODUCTION

This report documents the Protected Species Management and Human-Wildlife Coexistence Plan for Daniels Parkway South (Project). The management plan contained in this report pertains to the Eastern indigo snake (*Drymarchon corais couperi*), gopher tortoise (*Gopherus polyphemus*), American alligator (*Alligator mississippiensis*), crested caracara (*Caracara cheriway*), listed wading birds, Big Cypress fox squirrel (*Sciurus niger avicennia*), Florida black bear (*Ursus americanus floridanus*), and Florida panther (*Puma concolor coryi*).

The Project totals 1,233.08± acres and is located in Sections 8, 9, 16, 17, and 21; Township 45 South; Range 26 East; Lee County (Appendix A). The site is bordered to the north by Daniels Parkway, to the east by single-family residential development and undeveloped land, to the west by a Florida Power & Light (FPL) transmission line and undeveloped land, and to the south by Lee County's Wild Turkey Strand Preserve.

The property consists of large, continuous portions of herbaceous and forested upland and wetland habitats. These habitats include hydric melaleuca, freshwater marsh, pine flatwoods, cypress, and hydric pine with varying degrees of exotic vegetation. Improved pasture comprises the remaining balance of the property. Historic aerials show the property was formerly used for agricultural operations. As part of the historic agricultural surface water management, an extensive network of ditches and berms have been constructed on the property which has led to the partitioning of wetland systems within the site. This includes a historic farm road that bisects the site and precludes hydrologic connectivity between wetland systems located in the northern and southern portions of the property. This road has been used by the South Florida Water Management District (SFWMD) to represent the dividing line between the Estero River and Six Mile Cypress sub-watersheds.

2.0 LISTED SPECIES SURVEYS

Passarella & Associates, Inc. (PAI) conducted a Lee County protected species survey (PSS) on the Project site for ten days between May 11 and June 24, 2021. The survey was conducted to meet Lee County Land Development Code (LDC) Chapter 10, Article III, Division 8 (Protection of Habitat) standards. Six Lee County protected species and their signs (e.g., scat, tracks, nests, etc.) were documented during the PSS and other fieldwork conducted by PAI. The protected wildlife species directly observed by PAI included gopher tortoise, crested caracara, Florida sandhill crane (*Grus canadensis pratensis*), wood stork (*Mycteria americana*), and Big Cypress fox squirrel. In addition, a crested caracara nest was previously documented in the northern portion of the Project, and Florida panther tracks were also documented on the property. No other listed species nests or nesting activity were observed on the Project during the PSS or other fieldwork.

No Lee County protected plant species were observed on the property during the protected species survey. However, the giant wild pine (*Tillandsia utriculata*), common wild pine (*Tillandsia fasciculata*), Northern needleleaf (*Tillandsia balbisiana*), butterfly orchid (*Encyclia tampensis*), and rigid orchid (*Epidendrum rigidum*) were documented on the site. Although not listed as Lee

County protected species, these species are listed by the Florida Department of Agriculture and Consumer Services.

Table 1 summarizes the listed wildlife species that have been documented during the PSS and other fieldwork on the Project site.

Table 1. Listed Wildlife Species Documented

Common Name	Scientific Name	Listing Status	
		FWCC	USFWS

FWCC – Florida Fish and Wildlife Conservation Commission
USFWS – U.S. Fish and Wildlife Service
E – Endangered
FE – Federally Endangered
FT – Federally Threatened
ST – State Threatened
T – Threatened

3.0 CONSERVATION AREAS

The proposed conservation areas total 679.10± acres. The conservation areas will be maintained in accordance with the Indigenous Preservation, Restoration, and Management Plan (IPRMP) provided under separate cover. The conservation areas will be managed to provide habitat for listed species.

The Project has been designed to minimize impacts to the listed species that have been identified on the property and other listed wildlife species that could potentially utilize the site. The site plan minimizes impacts to existing native vegetation habitats and concentrates development primarily within the existing agricultural lands.

The indigenous vegetation enhancement and restoration activities within the conservation areas include:

- Preservation and enhancement of 295.80± acres of indigenous wetlands and uplands (existing forested and herbaceous habitats with less than 75 percent exotics);

- Restoration of 359.60± acres of indigenous wetlands and uplands through the removal of exotic vegetation (existing forested and herbaceous habitats with greater than 75 percent exotics) and supplemental planting;
- Backfilling 6.9± acres of other surface waters and replanting with native wetland and upland vegetation; and
- Removal of 16.8± acres of berms and planting with native wetland and upland vegetation.

The preservation, enhancement, and restoration of indigenous vegetation and removal of agricultural berms will facilitate the interconnection of historic flow-ways and wetland communities within the Project site. This includes a hydrologic connection between the two historically severed basins (i.e., Six Mile Cypress Sub-Watershed and Estero River Sub-Watershed), similar to what existed prior to the intensive agricultural land uses.

Due to the proximity to Southwest Florida International Airport (SWFIA), the restoration activities will include like-for-like habitat restoration to minimize wildlife attractants. For example, a melaleuca forest will be replaced with native trees and an exotic-infested marsh will be replanted with herbaceous vegetation. Plantings within the SFWIA 10,000-foot Hazardous Wildlife Buffer (Buffer) will be consistent with Lee County Port Authority's (LCPA) Compatible Native Landscape List. The planting details are provided in the IPRMP provided under separate cover.

The conservation areas will be managed for the listed species observed during the PSS and for listed species that could potentially utilize the Project site. Target listed species include the Eastern indigo snake, gopher tortoise, American alligator, crested caracara, listed wading birds, Big Cypress fox squirrel, Florida black bear, and Florida panther. To minimize potential wildlife attractants, enhancement and restoration activities will adhere to the hazardous wildlife protection measures included in Section 7.0 of this plan.

The conservation areas will be placed in a conservation easement with inspection, enforcement, and approval rights granted to Lee County and the SFWMD. The total preserve area to be placed under a conservation easement is 679.10± acres.

4.0 WILDLIFE CROSSINGS

To maintain internal connectivity for wildlife and promote the restoration of historic flow-ways through the property, wildlife crossings will be installed where the proposed internal roads cross the conservation areas. An aerial depicting the proposed location of the wildlife crossings is provided as Appendix B. The wildlife crossings will generally be designed to accommodate the passage of small mammals, reptiles, and amphibians. However, engineering and construction plans at the time of the Lee County Development Order application may reflect larger crossings designed to facilitate movement through the Project site by larger wildlife. As currently proposed, the wildlife crossing will be a culvert pipe or similar structure with the invert at natural grade. A section of low-level chain link fencing (i.e., three to four feet tall), or other structures approved by the Department of Community Development (DCD), will be installed on either side of the invert

to direct wildlife through the crossings. If utilized, larger crossings may consist of a bridge, large box culvert, or similar structure.

5.0 PERIMETER BUFFER LAKES AND FENCING

The Project site design includes perimeter buffer lakes and fencing between the residential development and conservation areas. The goal of the buffer lakes and fencing is to effectively deter Florida panther prey species (i.e., white-tailed deer (*Odocoileus virginiana*) and hog (*Sus scrofa*)) from entering residential areas. Deterring prey species form entering the development area will minimize the incentive for Florida panther to enter the Project area and reduce the potential for human-wildlife interactions. The wildlife fence and buffer lakes will also serve to accommodate the movement of wildlife among the conservation areas as described in Section 4.0 above.

The wildlife fencing will consist of a six-foot chain link fence which has previously been approved by the Florida Fish and Wildlife Conservation Commission (FWCC) for projects in Southwest Florida. The locations of the proposed buffer lakes and fencing are depicted on Appendix B.

6.0. COMMERCIAL USES

The Daniels Parkway South Master Plan includes dedicated commercial use adjacent to Daniels Parkway and State Road 82. To minimize potential human-wildlife interaction, educational brochures provided in this plan will be provided to commercial tenants. Commercial development will be required to minimize wildlife attractants by securing all exterior food and water sources.

Commercial uses, including restaurants, must secure exterior trash containers with locking lids and periodically clean cans to reduce residual odors. Grease traps will be located underground. Bear-resistant dumpsters will be used in areas where communal garbage is collected. A list of companies obtained from the FWCC that provide bear-resistant garbage containers for commercial use is provided as Appendix C. In consultation with the local waste disposal company, bear-resistant dumpsters will be purchased from one of the listed companies or another company that is able to provide bear-resistant dumpsters which are compatible with local equipment. The bear-resistant dumpsters will be incorporated at the time Lee County's waste collection sub-contractor makes them available for use.

7.0 HAZARDOUS WILDLIFE PROTECTION MEASURES

Due to the proximity to SWFIA, reducing human-wildlife interactions within the SWFIA Buffer is of paramount importance to the Project's restoration plan. Per communications with LCPA Staff and guidance from the Federal Aviation Administration (FAA) Advisory Circular (AC) No. 150/5200-33C regarding hazardous wildlife attractants on or near airports, the Project has incorporated multiple minimization measures within the Buffer, as described below.

Lakes developed for the Project's stormwater management system will incorporate a hardened shoreline (e.g., rip-rap) and/or steep slopes to minimize wading bird attractants. These lakes will also be maintained in a manner that keeps them free of both emergent and submergent vegetation such as pickerelweed (*Pontederia cordata*) and red ludwigia (*Ludwigia repens*). As required by the Lee Plan, the Project must preserve, enhance, and restore indigenous habitats. However, to avoid inconsistency with the LCPA's wildlife hazard deterrence efforts, the Project will not create wetlands within the Buffer. Existing wetland and upland habitats will be managed such that they are restored, where applicable, in a "like-for-like" manner as described in Section 3.0 above. In addition, plantings installed within the Buffer will adhere to the LCPA Compatible Native Plant List. Furthermore, the hydrologic restoration proposed within the conservation areas will be focused on interconnecting wetland systems and is not anticipated to increase wetland hydroperiods within the site.

Prior to construction, the applicant will coordinate a wildlife monitoring program with the LCPA and DCD staff. The monitoring program will consist of periodic observations within the development footprint and preserve areas by a qualified biologist to help identify and reduce potential wildlife hazards during construction activities, dewatering, exotic vegetation removal, and other site preparation activities. In addition, the monitoring plan will include specific construction-related Best Management Practices (BMPs) similar to what has been implemented for projects at Southwest Florida International Airport. The BMPs that will be incorporated into the wildlife monitoring program include, but are not limited to:

1. Construction contractors must carefully control and continuously remove waste or loose material that might attract wildlife.
2. Construction personnel must be aware of and avoid construction activities that can create wildlife hazards on airports.
3. Trash and food scraps from construction personnel activity must be collected and properly disposed of.
4. Except for stormwater management lakes and areas specifically designated for dewatering, large pools of water that collect within the development area shall be eliminated at the earliest opportunity to minimize wildlife attractants.
5. All turf grass replacement shall be completed via sodding. Seeding shall not be utilized.
6. Construction contractor shall communicate with the project biologist at least five days in advance prior to making any changes to hydrology in the construction area. Initiation of hydrologic changes shall be timed to minimize the attractiveness for dusk and dawn scavengers.
7. Construction and fill activities that turn-up organic materials, vegetation, or soils that contain food (crustaceans, invertebrates, fish, or others) should be minimized to the extent possible. Construction areas shall minimize the time that turned-up material is left exposed to the extent practicable.
8. Construction contractor shall allow wildlife the opportunity to move out of harm's way.
9. Construction contractor or another designated observer shall immediately dispose of carcasses found on site. This may occur by burying them at a depth of 36-inches or by another acceptable means of disposal.

Wildlife monitoring will occur a minimum of once per week during dewatering and initial exotic vegetation removal activities. However, monitoring may occur more frequently if potential wildlife hazards are identified. If wildlife hazards are identified within the Project, the Project team will coordinate with LCPA staff to immediately correct the issue(s). This may also involve coordination with local, state, and federal permitting agencies.

7.1 Lee Plan Consistency

Lee Plan Policy 47.2.5 states that "Hazardous wildlife attractants within 10,000 feet of a Port Authority airport's Air Operation Area (AOA) will be avoided by minimizing and correcting any wildlife hazards arising from wetlands or water bodies in accordance with FAA AC 150/5200-33B, or as otherwise amended. Site improvements on or near the Port Authority's airports must be designed to minimize attractiveness to wildlife of natural areas and man-made features such as detention/retention ponds, landscaping, and wetlands, which can provide wildlife with ideal locations for feeding, loafing, reproduction, and escape." Thus, Policy 47.2.5 is focused on compliance with the FAA AC on hazardous wildlife attractants on or near airports. The following demonstrates how the Project complies with the specific sections of the current FAA AC (150/5200-33C) with respect to minimizing wildlife attractants within the Buffer:

<u>FAA AC 150/5200-33C</u>

Section 2.3.2 – New Stormwater Management Facilities

This section of the AC states: "To facilitate the control of hazardous wildlife, the FAA recommends the use of steep-sided, rip-rap or concrete-lined, narrow, linear-shaped water detention basins." In addition, this section states that "All vegetation in or around detention basins that provide food or cover for hazardous wildlife should be eliminated." Furthermore, this section of the AC recommends designing surface water management features "so as not to create above-ground standing water". As outlined in Section 7.0 of this plan and in the IPRMP, the Project has incorporated the following design modifications to address these issues: 1) Stormwater management lakes located within the Buffer will incorporate hardened shorelines (e.g., rip-rap) and/or steep slopes (i.e., 4:1); 2) stormwater lakes will be maintained in a manner that keeps them free of both emergent and submergent vegetation; and 3) the open water flow path previously proposed to connect the Six Mile Cypress and Estero drainage basins within the Project has been redesigned to be a closed system (i.e., piped with no open standing water). Therefore, the proposed design modifications are consistent with Section 2.3.2 of the AC.

Section 2.4.1 – Existing Wetlands on or near Airport Property

This section of the AC states: "At public-use airports, the FAA recommends immediately correcting, in cooperation with local, state, and Federal regulatory agencies, any wildlife hazards arising from existing wetlands located on or near airports within five miles of the

aircraft operations area." As stated in Section 7.0, wildlife hazards identified within the Project will be coordinated with LCPA staff to immediately correct the issue(s). This may also involve coordination with local, state, and federal permitting agencies.

Section 2.4.3.2 – Off-Site Mitigation of Wetland Functions

This section of the AC states that "The FAA encourages landowners or communities supporting the restoration or enhancement of wetlands to do so only after critically analyzing how those activities would affect aviation safety. To do so, landowners or communities should contact the affected airport sponsor…" "Those parties should work cooperatively to develop restoration or enhancement plans that would not worsen existing wildlife hazards or create such hazards." "If parties develop a mutually acceptable restoration or enhancement plan, the landowner or community proposing the restoration or enhancement must monitor the restored or enhanced site. This monitoring must verify that efforts have not worsened or created hazardous wildlife attraction or activity. If such attraction or activity occurs, the landowner or community should work with airport sponsor…to reduce the hazard to aviation."

The applicant has had several meetings with LCPA staff to thoroughly vet the conceptual site plan and discuss opportunities to minimize wildlife attractants within the site. Based on these meetings, the applicant has incorporated multiple measures in this plan and in the IPRMP to minimize wildlife attractants per LCPA recommendations.

As demonstrated above, the Project is consistent with Sections 2.3.2, 2.4.1, and 2.4.3.2 of FAA AC 150/5200-33C; therefore, the Project is consistent with Lee Plan Policy 47.2.5.

8.0 EASTERN INDIGO SNAKE MANAGEMENT PLAN

The Eastern indigo snake has not been documented on-site; however, the following plan outlines the protection guidelines that will be implemented for the Eastern indigo snake during clearing operations for the Project. The plan provides educational material and guidelines for construction personnel to follow in the event they encounter an Eastern indigo snake. The plan has been prepared following the guidelines established by the U.S. Fish and Wildlife Service (USFWS). The Eastern indigo snake is a federally threatened species and is listed by the Endangered Species Act (ESA). It is unlawful for anyone to injure, harm, harass, or kill this species. Persons who knowingly violate provisions of the ESA that afford this species protection may be subject to a fine and/or imprisonment.

8.1 Biology

The Eastern indigo snake is a large, non-poisonous, glossy black snake with smooth iridescent scales. The chin and throat may be rusty or white-blotched. The juvenile snakes are similar to the adults, but may be lighter and exhibit a blotched dorsal pattern. Adults

can grow to lengths over eight feet. The Eastern indigo snake might be confused with the black racer (*Coluber constrictor*), but the black racer exhibits a white or brown throat and is smaller and lighter in build.

The Eastern indigo snake inhabits a range of habitat types including pine flatwoods and wet prairies. Individuals are wide ranging and may utilize an area of 250 acres or more. Eastern indigo snakes are known to shelter in gopher tortoise burrows. The Eastern indigo snake is diurnal (active only during the daytime) and will actively search for prey. Prey may include frogs, snakes, birds, and small mammals. Very little is known of the reproduction of this species in the wild. Breeding is believed to occur during the winter and early spring months with up to 11 large white eggs being deposited in late spring and early summer.

8.2 Management Plan

The USFWS' Standard Protection Measures for the Eastern Indigo Snake (2013) will be followed prior to and during construction activities. The Standard Protection Measures include the placement of posters at strategic locations on the construction site and along proposed access roads clearly visible to construction staff. The posters include a description and photograph of the Eastern indigo snake, its protection status, and instructions in the event that one is observed. In addition, informational brochures will be provided to all construction staff.

The Project will preserve, enhance, and restore 679.10± acres of existing vegetation on-site through the removal of exotic vegetation. The preserve areas will be maintained per the Project's IPRMP and will provide habitat for the Eastern indigo snake.

Problematic encounters between future residents and Eastern indigo snakes are not anticipated. Construction personnel, maintenance staff, and homeowners will be informed that the Eastern indigo snake is a protected species.

9.0 GOPHER TORTOISE MANAGEMENT PLAN

One gopher tortoise was observed on the Project site during the PSS. The following plan outlines the management activities that will be implemented for the gopher tortoise prior to the implementation of site clearing. The gopher tortoise is listed as threatened by the FWCC.

9.1 Biology

The gopher tortoise is a large, terrestrial turtle averaging 23 to 28 centimeters (9 to 11 inches) in shell length. Maximum length is around 38 centimeters (15 inches). The gopher tortoise is characterized by stumpy, elephantine hind feet and flattened, shovel-like forelimbs adapted for digging. The tan, brown, or gray carapace (top portion of the shell) is domed and oblong. The plastron (bottom portion of the shell) is somewhat concave in

males. Growth annuli may be conspicuous, particularly in juveniles. Hatchlings are approximately 4.4 centimeters (1.7 inches) in length and are yellowish orange in color.

The gopher tortoise occurs in the Southeastern Coastal Plain of the United States from Eastern Louisiana to Southeastern South Carolina and throughout Florida. In Florida, gopher tortoises occur in portions of all 67 counties. Gopher tortoises inhabit a wide variety of upland vegetative communities. Three environmental conditions are especially important for gopher tortoises: well-drained, sandy soil in which to burrow; adequate low-growing herbaceous ground cover for food; and relatively open, sunlit areas for nesting. The gopher tortoise is primarily associated with longleaf pine-scrub oak woodlands (sandhills), but it is also found in sand pine scrub, coastal strands, live oak hammocks, dry prairies, pine flatwoods, and mixed hardwood-pine communities. Disturbed habitats, such as roadsides, fencerows, clearings, and old fields, often support relatively high tortoise densities.

Gopher tortoises excavate burrows averaging 4.5 meters (14.8 feet) in length and 2 meters (6.6 feet) in depth and wide enough to allow them to turn around at any point. These burrows provide protection from temperature extremes, desiccation, and predators and serve as refuges for a variety of other animals. The placement and depth of burrows vary with the soil type, geographic location, and ground water levels. An individual tortoise may use more than one burrow and may excavate new burrows at any time during its life.

Gopher tortoise densities and movements are affected by the amount of herbaceous ground cover present. Generally, feeding activity is confined to within 50 meters (164 feet) of the burrow. Principal foods include grasses, legumes, and grass-like plants of the sedge and aster families. Legumes appear to be particularly important in the diet of juveniles. Fruits such as blackberries, pawpaws, gopher apples, and saw palmetto (*Serenoa repens*) berries are also consumed.

9.2 Management Plan

After construction is completed, the Project may not contain suitable gopher tortoise habitat within the conservation areas necessary for the long-term survivability of the species. No gopher tortoise burrows were located within the Project site during the PSS. However, if gopher tortoise burrows are located within the development footprint and it is not feasible to provide a minimum 25-foot buffer to the burrows, the applicant will obtain a permit from the FWCC to relocate gopher tortoise(s) to a protected recipient site prior to initiating construction activities. The recipient site will be approved by the FWCC and managed in perpetuity, consistent with FWCC's Gopher Tortoise Management Plan (2012).

10.0 AMERICAN ALLIGATOR MANAGEMENT PLAN

No American alligators were observed on-site during the PSS; however, potential nesting and foraging habitat (i.e., wetlands, and freshwater marshes) exists on-site. The following plan outlines the protection guidelines that will be implemented for the American alligator during clearing

operations for the Project. The American alligator is listed as threatened (due to similarity of appearance) by the USFWS and the FWCC.

10.1 Biology

The American alligator is a reptile with an elongated, armored, lizard-like body with a muscular flat tail. Adult alligators are dark with a pale underside while juveniles have bright yellow stripes and blotches. The average size for adults is 8.2 feet for females and 11.2 feet for males. The body weight can reach up to a half ton. American alligators inhabit all counties in the State of Florida and are most common in the major river drainage basins and large lakes in the central and southern portions of the state. They also can be found in marshes, swamps, ponds, drainage canals, phosphate-mine settling ponds, and ditches. Alligators are tolerant of poor water-quality and occasionally inhabit brackish marshes along the coast. A few even venture into saltwater. Individuals are wide ranging, and some males may utilize an area of two square miles or more. Individuals of both sexes are most likely to become more active and extend their ranges during the April to May courtship and breeding season. Prey may include frogs, snakes, birds, and small mammals, although alligators are opportunistic feeders and may prey on what is readily available. Larger individuals often prefer carrion to fresh meat.

10.2 Management Plan

The proposed Project will not impact the alligator. Alligators commonly move from water body to water body in response to factors such as season, disturbances, food supply, etc. The American alligator is listed as a federally threatened species due to similarity of appearance to the American crocodile (*Crocodylus acutus*). Only representatives of the FWCC are authorized to handle nuisance alligators. If an alligator is present within the limits of construction at the time of clearing, work within the immediate vicinity of the alligator will be halted and the animal will be allowed to move out and into safer territory. Once the alligator has moved, work can be restarted. If an active alligator nest is found, it will be temporarily protected with an adequate buffer zone until the hatchlings leave the nest.

Extensive, high quality American alligator habitat will be provided throughout the property through wetland preservation, enhancement, and restoration. This includes the removal of exotics in approximately 507.2± acres of existing wetlands on the property. These wetlands are predominantly hardwood/conifer, mixed, mixed wetland hardwoods, cypress forest, hydric pine forest, and freshwater marshes habitat types. Invasive exotic removal will result in wetland preserves that are more suitable to alligators and their prey species. The preserve areas will be maintained per the Project's IPRMP.

To avoid problematic encounters between future residents and American alligators, the FWCC's educational brochure entitled "A Guide to Living with Alligators" (Appendix D) will be provided to homeowners and maintenance staff (see Section 16.2).

11.0 CRESTED CARACARA MANAGEMENT PLAN

Two crested caracara were observed on the Project site during the PSS. In addition, a crested caracara nest was previously documented in the northern portion of the property. This nest was active during the 2020-2021 caracara nesting season. The following management plan outlines the protection guidelines that will be implemented for the crested caracara prior to clearing activities on the Project and addresses habitat enhancement and restoration on the site. The crested caracara is listed as threatened by the USFWS and the FWCC.

11.1 Biology

The crested caracara is a large, non-migratory raptor that feeds both on prey and carrion and is often found with flocks of turkey vultures (*Cathartes aura*) and black vultures (*Coragyps atratus*). The population of crested caracara found in peninsular Florida is genetically isolated from other populations of crested caracara subspecies found in the Southwestern United States and portions of Central and South America (USFWS 1999). While other subspecies of crested caracara are not listed as threatened or endangered, the crested caracara subspecies found in Florida was listed in July 1987 as threatened under the ESA.

Crested caracaras primarily use open habitats including native prairies; grasslands and pastures with their associated freshwater marshes; and small clumps of cabbage palms (*Sabal palmetto*), live oak (*Quercus* spp.) hammocks, and cypress (*Taxodium* spp.). Cabbage palms in open habitats are of high importance for nesting (Rodgers *et al.* 1996, Morrison 2001). The primary nesting season for the crested caracara is November through April. Egg laying typically occurs December through February. Clutch size is one to three eggs and incubation ranges from 28 to 32 days. Caracara young fledge at age seven to eight weeks, mostly in March and April (Wood 2001).

11.2 Management Plan

Since a caracara nest has been documented in the northern portion of the Project site, it is anticipated that removal of the nest tree(s) will be negotiated with the USFWS as part of the State 404 permitting process. Prior to clearing activities, a qualified ecologist will survey the construction impact area and adjacent habitats for the presence of crested caracara nests. The removal of any caracara nests located within the Project site will be coordinated with USFWS and DCD staff prior to initiation of construction activities.

The completed Project will preserve, enhance, and restore 679.10± acres of native habitat. The conservation areas will contain open freshwater marsh and pine habitat that will provide potential foraging opportunities caracaras.

Problematic encounters between future residents and crested caracaras are not anticipated. Should a caracara choose to nest adjacent to the community or close to approved access areas within the preserves, the nest will be left undisturbed. If unanticipated nest

disturbance is noted, then an appropriate no-entry buffer zone will be established around the nest with signage until the young fledge.

12.0 WADING BIRD AND FLORIDA SANDHILL CRANE MANAGEMENT PLAN

Although no nesting activity was observed, wood storks were observed on-site during the PSS. In addition, a Florida sandhill crane was also observed utilizing the Project site. It is anticipated that these birds and others, including limpkin (*Aramus guarauna*), little blue heron (*Egretta caerulea*), tri-colored heron (*Egretta tricolor*), and roseate spoonbill (*Platalea ajaja*) may utilize the wetlands and other native habitats on the property. The following management plan has been prepared for the purpose of addressing the management of potential wading bird and Florida sandhill crane habitat on the site.

12.1 Management Plan

Prior to clearing activities, a qualified ecologist will survey the construction impact area and adjacent habitats for the presence of Florida sandhill crane and state-listed wading bird nests. If there is evidence of Florida sandhill crane or listed wading bird nesting, the appropriate FWCC-recommended buffer will be provided around the nest site(s) to avoid disturbance by human activities. If Florida sandhill crane or listed wading bird nesting is discovered after construction has begun or if maintaining the buffers is not possible, the applicant will contact the FWCC staff to discuss potential permitting requirements.

The Project proposes preservation and enhancement of wading bird habitat. Foraging areas will be provided through the preservation, enhancement, and restoration of 507.2± acres of existing wetlands. To minimize potential wildlife attractants, enhancement and restoration activities will adhere to the hazardous wildlife protection measures included in Section 7.0 of this plan.

Problematic encounters between future residents and Florida sandhill cranes and wading birds are not anticipated. Construction personnel, maintenance staff, and homeowners will be informed that the wading birds are protected species. Additionally, informational pamphlets will be provided to homeowners and maintenance staff (Appendix E) (see Section 16.2).

13.0 BIG CYPRESS FOX SQUIRREL MANAGEMENT PLAN

During the PSS, the Big Cypress fox squirrel was observed utilizing forested and disturbed areas on-site. The following management plan has been prepared for the purpose of addressing the conservation of Big Cypress fox squirrel habitat on the Project site and outlines the protection guidelines that will be implemented for the Big Cypress fox squirrel prior to, during, and after construction of the Project. The Big Cypress fox squirrel is listed as threatened by the FWCC. There is no federal listing for the Big Cypress fox squirrel in Florida.

13.1 Biology

The Big Cypress fox squirrel lives and breeds in varied habitats in Southwest Florida including cypress swamps, pine flatwoods, tropical hardwood forests, live oak woods, mangrove forests, and suburban habitats, including golf courses, city parks, and residential areas in native vegetation (Humphrey 1992). Dense cypress/hardwood swamps are avoided. This may be due to the competition for food and habitat with the Eastern gray squirrel (*Sciurus carolinensis*). Little data is available on the preferred forage habitat of the Big Cypress fox squirrel. Big Cypress fox squirrels prefer to feed on the male and female cones of slash pine. Cabbage palm fruits, bromeliad (*Bromeliaceae* sp.) buds, and acorns are also important food items. A smaller percentage of the diet may consist of seasonal fruits, berries, and seeds (Humphrey 1992).

Big Cypress fox squirrels often form platform nests in pines and hardwoods, and moss and stick nests in cypress, tops of cabbage palms, and large clumps of bromeliads. Cabbage palms and bromeliads are especially important because they can provide immediate shelter, which allows the squirrel to travel over large areas without requiring a daily return to a permanent nesting facility (Humphrey 1992).

Big Cypress fox squirrels are solitary animals. Interaction between animals occurs primarily during mating season. Mating chases occur frequently throughout the months of May through August. During the non-mating season, interactions are infrequent and often occur around food sources. Young remain in the nest for approximately 90 days. Home ranges are 40 hectares (approximately 100 acres) for males and 20 hectares (approximately 50 acres) for females (Humphrey 1992).

13.2 Pre-Construction Surveys

A qualified ecologist will be on-site to supervise Big Cypress fox squirrel management and monitoring activities as detailed in this plan. Prior to clearing activities, the preserve areas will be staked in the field and clearly identified with silt fencing or an equivalent barrier. The fencing will be inspected by the preserve manager prior to clearing activities. The operation and storage of construction equipment and the stock-piling of fill and construction material will be prohibited within the fenced preserve areas. The fencing identifying the limits of the preserves will be maintained for the duration of construction activities.

Also, prior to commencement of clearing activities in the development area and removal of exotic trees within the preserve areas, a survey will be conducted by a qualified ecologist to identify potential Big Cypress fox squirrel nests. If potential nests are identified within the clearing limits or within the preserve areas, observations will be conducted to determine if the nests are being utilized by Big Cypress fox squirrels. The FWCC will be notified of nests determined to be utilized by Big Cypress fox squirrels. Active nests will be temporarily protected from clearing by a 125-foot radius undisturbed buffer until juvenile fox squirrels have vacated the nest(s), as confirmed by a qualified ecologist. After completion of nesting and observations documenting that juvenile fox squirrels have

vacated the nest(s), a written request to remove the nest tree(s) will be made to the FWCC. After receipt of the written authorization from the FWCC, the nest tree and buffer can then be cleared.

13.3 Management Plan

Enhancement and restoration of the preserve areas will be conducted as detailed in the IPRMP. The preserve areas will provide foraging and nesting habitats for Big Cypress fox squirrels.

Problematic encounters between future residents and Big Cypress fox squirrels are not anticipated. The typical nest location, high within the tree canopy, will ensure against disturbance to fox squirrel nests. Construction personnel, maintenance staff, and homeowners will be informed that the Big Cypress fox squirrel is a protected species.

14.0 FLORIDA BLACK BEAR MANAGEMENT PLAN

Though no Florida black bear or sign of Florida black bear was documented on the Project site during the PSS, it is anticipated that Florida black bears are within the general vicinity of the Project. The following habitat management plan has been prepared for the purpose of addressing the conservation of Florida black bear habitat on the Project site. The Florida black bear is not listed by the FWCC or the USFWS. However, the FWCC and the Lee County LDC have specific management activities for this species.

14.1 Biology

The Florida black bear is a subspecies of the American black bear (*Ursus americanus*). The Florida black bear is a solitary animal that inhabits heavily wooded terrain and is most often found in large tracts of swamp forest and undisturbed upland forest. Some of the most important habitat types for the Florida black bear include pine flatwoods, hardwood swamps, cypress swamps, cabbage palm forests, sand pine scrub, and mixed hardwood hammocks. Denning often occurs in remote swamps or thickets with dense vegetation. Adult females breed in alternating years during the months of June and July. In Florida, hibernation may be restricted to females producing cubs. Hibernation most often occurs during the winter months. The diet of Florida black bears is highly variable and includes both plants and animals including saw palmetto berries, honeybees (*Apis* sp.), ants (*Formicidae* sp.), armadillo (*Dasypus novemcinctus*), feral hog (*Sus scrofa*), and white-tailed deer (*Odocoileus virginianus*) (Humphrey 1992).

14.2 Management Plan

In order to deter the potential for interactions between humans and large mammals such as the Florida black bear, perimeter buffer lakes and fencing will be utilized between development and the conservation areas to deter large mammals from accessing the development areas.

The preserved, enhanced, and restored habitat within the conservation areas will provide habitat for the Florida black bear and associated prey species. Enhancement activities will provide higher quality habitat for the Florida black bear than what currently exists within the site.

To avoid problematic encounters between future residents and Florida black bears, the FWCC's educational brochure entitled "A Guide to Living in Bear Country" (Appendix F) will be provided to homeowners and maintenance staff (see Section 16.4).

15.0 FLORIDA PANTHER MANAGEMENT PLAN

No Florida panthers were observed on-site during the PSS; however, panther tracks were observed on-site. The property is located within both the USFWS' Primary and Secondary Zones for the Florida panther. In addition, FWCC Florida panther telemetry has been recorded on the Project site and adjacent properties. The following habitat management plan has been prepared for the purpose of addressing the conservation of Florida panther habitat on the Project site. The Florida panther is listed as endangered by the FWCC and the USFWS.

15.1 Biology

The Florida panther is a large, long-tailed cat with a great deal of color variation: pale brown or rusty upper parts; dull white or buff-colored under parts; and dark brown or blackish tail tip, back of ears, and sides of the nose. Mature males have an average weight range between 100 to 150 pounds and measure nearly seven feet from nose to tip of the tail. Females are considerably smaller with a weight range of 50 to 100 pounds and measuring about six feet (USFWS 1987). Panthers subsist on a variety of mammalian prey dominated by white-tailed deer, feral hog, and in some areas raccoon (*Procyon lotor*) (Maehr 1988*a*). Existing data on Florida panther reproduction indicates that breeding occurs throughout the year with a peak in the winter/spring period, a gestation period of around 90 to 95 days, litter sizes of one to four kittens, and a breeding cycle of two years for females successfully raising young to dispersal (which occurs around 18 to 24 months) (Belden 1988, Maehr 1988*b*).

In terms of population size and occupied range, the Florida panther population is at least stable, and at best expanding, as evidenced by natality rates exceeding mortality rates and by recent dispersals north of the Caloosahatchee River (Land *et al.* 2000). According to Maehr *et al.* (1991), home ranges average 200 square miles for resident adult males, 75 square miles for adult females, 241 square miles for transient males, and 69 square miles for sub-adult females. Florida panthers inhabit large remote tracts of land with adequate prey and cover and occupy a variety of habitat types including hardwood hammocks, pine flatwoods, mixed hardwood swamps, and cypress swamps. Appropriate cover is an important component of habitats used, especially during hunting, denning, and day-bedding. Recent information based on global positioning system (GPS) telemetry data collected during nocturnal and diurnal periods indicate that forests are the habitats selected by panthers (Land *et al.* 2008).

15.2 Management Plan

In order to deter the potential for interactions between humans and large mammals such as the Florida panther, perimeter buffer lakes and fencing will be utilized between development and the conservation areas to deter large mammals from accessing the development areas.

The preserved, enhanced, and restored habitat within the conservation areas will provide habitat and a wildlife corridor for the Florida panther and associated prey species. Enhancement activities will provide higher quality habitat for the Florida panther than what currently exists within the site.

To avoid problematic encounters between future residents and Florida panthers, the educational brochure entitled "A Guide to Living with Florida Panthers" (Appendix G), prepared by the FWCC and the USFWS, will be provided to homeowners and maintenance staff (see Section 16.5).

16.0 HUMAN-WILDLIFE COEXISTENCE PLAN

The following Human-Wildlife Coexistence Plans will be incorporated into the declaration of covenants of the Project's Homeowners Association or Community Development District documents.

16.1 Eastern Indigo Snake

As previously noted, the USFWS' Standard Protection Measures for the Eastern Indigo Snake (2013) will be followed prior to and during construction activities. The USFWS's Standard Protection Measures, including the poster and brochure, can be found at http://www.fws.gov/verobeach/listedspeciesreptiles.html. A copy of the brochure is provided as Appendix H.

16.2 American Alligator

Signs will be posted on the subject property to instruct on-site workers and homeowners not to feed or harass the American alligator. The signs will indicate that the offense is punishable by law. The typical signage is provided as Appendix I. The FWCC's educational brochure entitled "A Guide to Living with Alligators" (Appendix D) will be provided to homeowners and maintenance staff. The brochure can be found at http://myfwc.com/media/152524/Alligator_Brochure.pdf. Construction personnel and homeowners will be instructed that in the event there is a problem with a persistent nuisance alligator, they should contact the FWCC's Nuisance Alligator Hotline at 866-FWC-GATOR (866-392-4286). The FWCC is the only agency empowered to handle nuisance alligators.

16.3 Wading Bird

A wading bird informational brochure entitled "Wading Bird Informational Pamphlet" (Appendix E) will be provided to homeowners and maintenance staff. The brochure provides wading bird information and methods to prevent human-wading bird interactions. In addition, the brochure informs residents of the need to avoid disturbance around a nest(s), should a wading bird nest(s) be identified on the property in the future.

16.4 Florida Black Bear

Residents will be educated about the presence of black bears in their community. FWCC's educational brochure entitled "A Guide to Living in Bear Country" (Appendix F) will be provided to homeowners and maintenance staff. This brochure can be found at http://myfwc.com/wildlifehabitats/managed/bear/brochures/.

Garbage and recyclables will be stored in bear-resistant containers with appropriate locking mechanisms, and bear-resistant dumpsters will be used in areas where communal garbage is collected. A list of companies obtained from the FWCC that provide bear-resistant garbage containers for commercial and residential use is provided as Appendix C. Bear resistant receptacles will be required for each residential unit. Please note that Lee County Ordinance No. 11-27 requires individual trash receptacles for residential units of 40 gallons or less in size. In consultation with the local waste disposal company, bear-resistant dumpsters will be purchased from one of the listed companies or another company that is able to provide bear-resistant dumpsters which are compatible with local equipment. They will be incorporated at the time Lee County's waste collection sub-contractor makes them available for use. Units that have curbside garbage service will be required to place garbage containers curbside no earlier than the morning of the days of garbage pickup, and garbage containers will be returned to their permitted location no later than the evening of the days of garbage pickup. For units with curbside garbage service, all garbage, trash refuse, or rubbish will be required to be placed in appropriate garbage containers and stored inside an enclosed area except for the days when there is curbside garbage pickup service. For units without curbside garbage service, all garbage, trash refuse, or rubbish will be placed in bear-resistant dumpsters with the lid closed and secured.

16.5 Florida Panther

Residents will be educated about the presence of Florida panthers in their community. The educational brochure entitled "A Guide to Living with Florida Panthers" (Appendix G), prepared by the FWCC and the USFWS, will be provided to homeowners and maintenance staff. This brochure provides safety tips and instructions for panther encounters. The brochure can be found on the FWCC website located at http://myfwc.com/conservation/you-conserve/wildlife/panthers/.

17.0 PRESERVE SIGNAGE AND COMMUNITY EDUCATION PLAN

Signs identifying the conservation areas as a "nature preserve area" will be installed along the boundary of the preserve. The signage will include language stating, "No dumping allowed" (Appendix I). The signs will be spaced a maximum of 300 feet apart, will be no closer than ten feet from residential property lines, and will be limited to a maximum height of four feet and a maximum size of two square feet.

Periodic seminars may be held to further educate the community about the conservation areas, wetland benefits, and coexistence with and protection of wildlife. Continued education will ensure that the community is well informed regarding the preserves and wildlife coexistence.

APPENDIX D

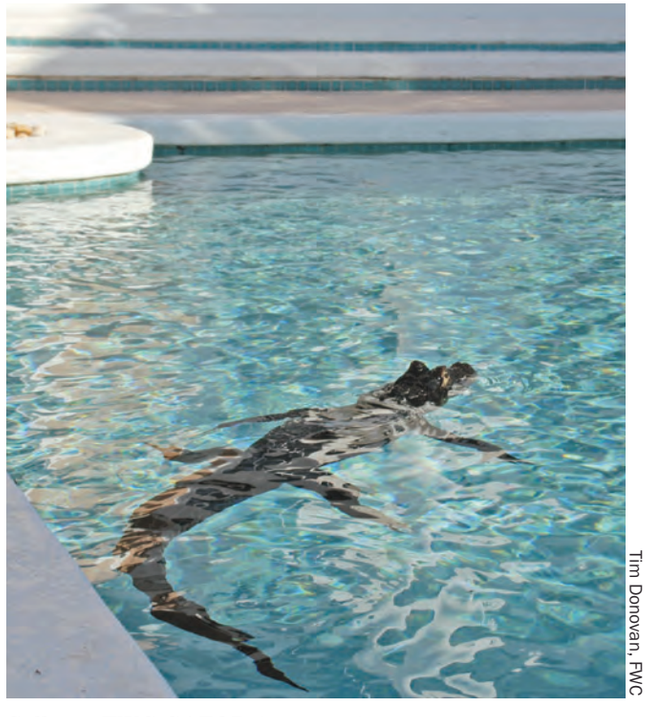

AMERICAN ALLIGATOR INFORMATIONAL PAMPHLET

- Never feed alligators – it's dangerous and illegal. When fed, alligators can overcome their natural wariness and learn to associate people with food. When this happens, some of these alligators have to be removed and killed.

- Dispose of fish scraps in garbage cans at boat ramps and fish camps. Do not throw them into the water. Although you are not intentionally feeding alligators when you do this, the result can be the same.

- Seek immediate medical attention if you are bitten by an alligator. Alligator bites can result in serious infections.

- Observe and photograph alligators only from a distance. Remember, they're an important part of Florida's natural history as well as an integral component of aquatic ecosystems.

Tim Donovan, FWC

Lizabeth West, FWC

Do not swim outside of posted swimming areas or in waters that may be inhabited by alligators.

Living with Alligators

In Florida, the growing number of people living and recreating near water has led to a steady rise in the number of alligator-related complaints. The majority of these complaints relate to alligators being where they simply aren't wanted. Because of these complaints, the Florida Fish and Wildlife Conservation Commission's Statewide Nuisance Alligator Program permits the killing of approximately 7,000 nuisance alligators each year. Using this approach, and through increased public awareness, the rate of alligator bites on people has remained constant despite the increased potential for alligator-human interactions as Florida's human population has grown.

Alligators are an important part of Florida's landscape and play a valuable role in the ecology of our state's wetlands. Alligators are predators and help keep other aquatic animal populations in balance. A better understanding of the facts and information presented in this brochure will help ensure that people and alligators can continue to coexist.

Visit MyFWC.com/Gators for more information about alligators and the latest nuisance alligator program statistics.

Tim Donovan, FWC

Alligators and People

Alligators are a fundamental part of Florida's wetlands, swamps, rivers and lakes, and they are found in all 67 counties. Florida continues to experience human population growth. Many new residents seek waterfront homes, resulting in increased interactions between people and alligators.

Although most Floridians understand that we have alligators living in our state, the potential for conflict exists. Because of their predatory nature, alligators may target pets and livestock as prey. Unfortunately, people also are occasionally bitten. Since 1948, Florida has averaged about five unprovoked bites per year. During that period, a little more than 300 unprovoked bites to people have been documented in Florida, with 22 resulting in deaths.

In the past 10 years, the Florida Fish and Wildlife Conservation Commission has received an average of nearly 16,000 alligator-related complaints per year. Most of these complaints deal with alligators occurring in places such as backyard ponds, canals, ditches and streams, but other conflicts occur when alligators wander into garages, swimming pools and golf course ponds. Sometimes, alligators come out of the water to bask in the sun or move between wetlands. In many cases, if left alone, these alligators will eventually move on to areas away from people.

Safety Tips

- Generally, alligators less than four feet in length are not large enough to be dangerous unless handled. However, if you encounter any alligator that you believe poses a threat to people, pets or property, call the Nuisance Alligator Hotline at 866-FWC-GATOR (866-392-4286). Please be aware, nuisance alligators are killed, not relocated.

- Be aware of the possibility of alligators when you are in or near fresh or brackish water. Bites may occur when people do not pay close enough attention to their surroundings when working or recreating near water.

- Do not swim outside of posted swimming areas or in waters that might be inhabited by large alligators.

- Alligators are most active between dusk and dawn. Therefore, avoid swimming at night.

- Dogs and cats are similar in size to the natural prey of alligators. Don't allow pets to swim, exercise or drink in or near waters that may contain alligators. Dogs often attract an alligator's interest, so do not swim with your dog.

- Leave alligators alone. State law prohibits killing, harassing or possessing alligators. Handling even small alligators can result in injury.

Tim Donovan, FWC

A young alligator wanders onto a porch in a residential neighborhood.

APPENDIX E

WADING BIRD INFORMATIONAL PAMPHLET

Action to be taken if you observe someone harassing a wading bird:

Promptly notify the FWCC 1-888-404-FWCC

Tips for living with wading birds

- Do not feed wading birds.
- Keep out of vegetated areas surrounding lakes and marshes.
- Keep pets leashed to avoid coming into contact with wading birds.
- Properly dispose of fishing line to avoid bird entanglement.

Prepared By:

Passarella & Associates, Inc. Consulting Ecologists

13620 Metropolis Avenue, Suite 200
Fort Myers, Florida 33912
(239) 274-0067

WADING BIRD INFORMATIONAL PAMPHLET

Daniels Parkway South

Description:

Wading birds are a diverse group of birds which utilize shallow marsh areas as foraging and breeding habitats. They are typically characterized as having long necks, legs and bills, which allows them to feed in shallow water. Wading birds can be found in Florida year round. Examples of wading birds include: great egrets, great blue herons, white ibis', little blue herons and snowy egrets.

Habitat:

Wading birds inhabit all counties in the state of Florida and are most common in the shallow marsh or wetland areas throughout the state. They can also be found in both coastal and inland areas, salt marshes, swamps, ponds, drainage canals, and ditches. Wading birds breed and nest in colonies which consist of various species of other wading birds. Breeding generally occurs just prior to or during the wet season. Stick nests are built in trees or bushes near wetland areas and above the water line.

Wading birds feed in shallow water areas where prey is most concentrated. They feed by spearing prey with their bills or by straining small species out of the water and sediment. Prey may include small fish, invertebrates or other aquatic organisms. Wading birds have also been known to consume snakes, frogs and small rodents.

Protection:

Most wading birds are listed as species of special concern by the State of Florida. Some species such as wood storks are listed as endangered by both the State of Florida and the U.S. Fish and Wildlife Service. It is unlawful for anyone to disturb or take nests or eggs, feed, injure, harm, harass, or kill any wading birds species. Persons who knowingly violate the law may be subject to fines and/or jail time.

If wading birds form a nesting colony on the property in the future, avoid activities within 330 feet of the colony during the nesting season (March 1 to August 1).

APPENDIX F

FLORIDA BLACK BEAR INFORMATIONAL PAMPHLET

Eglin AFB

Secure your garbage

- Store garbage in a secure area, such as a sturdy shed or garage, until the morning of pickup, or
- Build a small shed to store trash cans. Be sure there are no gaps along the shed's edges and use screws. If the shed is curbside, call your waste service provider to ensure it will still service your trash cans, or
- Modify your regular trash can to make it bear-resistant by adding hardware. To be successful, the lid must not be flexible and the can must not collapse when you stand on its side. Call your waste service provider to ensure it will service a modified trash can, or
- Request a commercially manufactured bear-resistant trash can from your waste service provider. If they do not provide these cans, you can special order one from a hardware store, but ensure your waste service provider will service it.

Funds from Florida's "Conserve Wildlife" license plate help conserve bears and reduce human-bear conflicts. Buy one today through your local tax collector's office or online at BuyAPlate.com.

Milt Fox

How FWC responds to conflicts

The FWC addresses human-bear conflicts in a variety of ways, including providing technical assistance over the phone, conducting an in-person visit with the resident, using deterrents (such as an electric fence), attempting to scare the bear away, or, in rare cases, attempting to trap the bear.

While most conflicts can be avoided by securing attractants, biologists assess each situation on a case-by-case basis and use FWC policies and guidelines to help decide on the most appropriate response.

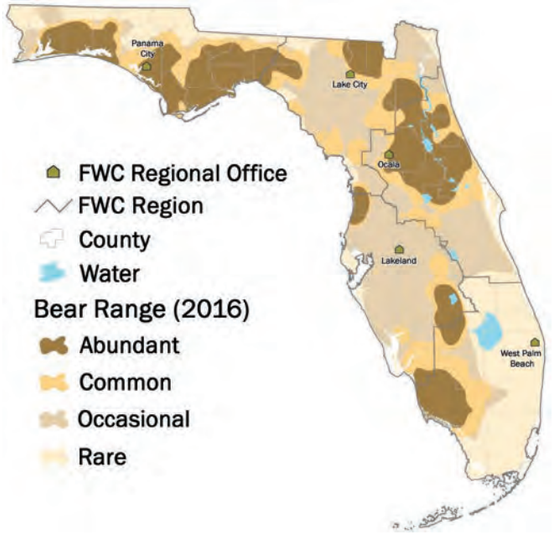

The earlier the FWC is notified, the more response options are available.

The longer a conflict situation continues, the more likely the bear will develop behaviors that present a risk to public safety, such as entering a dwelling, harming a leashed dog or injuring a person.

Once this happens, it is too late to try to change the bear's behavior and it must be humanely killed.

Warning! It is illegal to take, possess, injure, shoot, collect or sell black bears under Florida state law unless authorized by an FWC-issued permit. If you are found guilty, you could face fines and/or jail time.

Where bears live in Florida

If you are experiencing bear conflicts, please contact the nearest FWC regional office. The sooner the FWC knows about bear activity, the more options are available to prevent a bear from becoming a public safety risk.

North Central	**Lake City**	**(386) 758-0525**
Northeast	**Ocala**	**(352) 732-1225**

A guide to living in **bear country**

Ashley Hockenberry

Florida Fish and Wildlife Conservation Commission
MyFWC.com/Bear

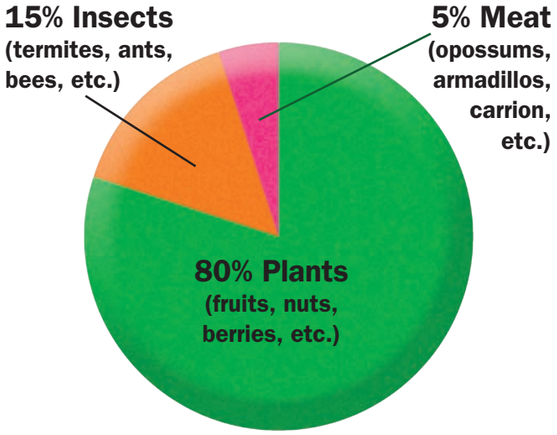

Ashley Hockenberry

The bear facts

- Black bears are the only species of bear in Florida.
- Biologists estimate approximately 4,000 black bears roam Florida today, compared to as few as 300 bears in the 1970s.
- Bears can pick up scents from over a mile away: that's seven times better than a bloodhound and the best of any land mammal.
- Adult bears typically weigh between 150 to 400 pounds, with males often twice the size of females.
- Females have their first litter around 3 years of age, with one to three cubs born every other year.
- Breeding occurs from June to August, with cubs born around February 1.
- On average, females range over 15 square miles and males range over 60 square miles.

A bear's diet

Bear behavior and you

Black bears are shy and generally not aggressive. When seen near homes or workplaces, bears are often just passing through. When frightened, bears typically run away or climb a tree. If a bear is in a tree, it is either feeding or trying to escape danger. Keep people and pets away, and the bear will leave on its own, usually after dark.

When a bear stands on its hind legs, it is trying to get a better view or scent. Black bears may huff, snap their jaws, swat the ground or "bluff charge" when cornered, threatened or defending food or young. If this happens, stop, hold your ground and then slowly back away.

Remember bears are large, powerful, wild animals that can act unpredictably and become dangerous. Bears who receive food from people may lose their natural fear of them and are more likely to damage property or become a public safety risk. NEVER feed or attract bears. If a bear is eating something on your property, take note of what it is and secure it after the bear has left the area.

Learn all about Florida's bears and being BearWise at *MyFWC.com/BearWise*.

BearWise

BearWise tips:

- Never approach a bear. Keep as much distance between you and the bear as possible.
- If a bear changes its behavior because you're there, you are too close.
- If you encounter a bear at close range, stand with arms raised, back up slowly and speak to the bear in a calm, assertive voice.
- Do not turn your back, play dead or run from a black bear.
- Make sure you are in a secure area, such as a car or building, and the bear has a clear escape route, then scare the bear away with loud noises, like yelling, blowing a whistle, or using an air or car horn.
- Install a motion-activated device, such as flood lights, a water sprinkler or audio alarm, to scare a bear away from a location when you are not present.
- Report any bear threatening the safety of people, pets or livestock, or causing property damage, to the FWC (see back cover).
- Walk dogs on a non-retractable leash and be aware of your surroundings. Dogs can trigger defensive behaviors from bears.

Encourage your school system to use the *Florida Black Bear Curriculum Guide*. The guide is designed for grades 3 to 8 and is correlated to state education standards.

Avoid attracting bears

Bears do not hang around people if they do not find food. Properly storing or securing garbage and other attractants is a proven method of preventing bear conflicts. However, it takes a community-wide effort to keep bears wild and away from neighborhoods.

- Use electric fencing to protect gardens, garbage, compost piles, beehives, fruit trees and livestock.

John Bailey

- Keep garage doors closed when not in use.
- Feed pets indoors or bring food dishes (even empty ones) inside at night.
- Store pet and livestock feed in bear-resistant containers or inside a secure area.
- Remove or modify bird and wildlife feeders and ensure the ground is free of all feed debris.
- Properly harvest ripe nuts, fruits, and vegetables and remove rotten fruits and vegetables.
- Create an "unwelcome" mat by driving finishing nails, heads up, into a sheet of anchored plywood to keep bears away from a specific area, such as under a window, door or fence.
- Keep outdoor refrigerators and freezers in a secure location or lock up with super-adhesive anchors, like Marine Locks™.
- Clean meat smokers and barbeque grills with a degreasing detergent and store in a secure area. Dispose of food remnants/grease after each use.

A screened-in porch will not keep bears out!

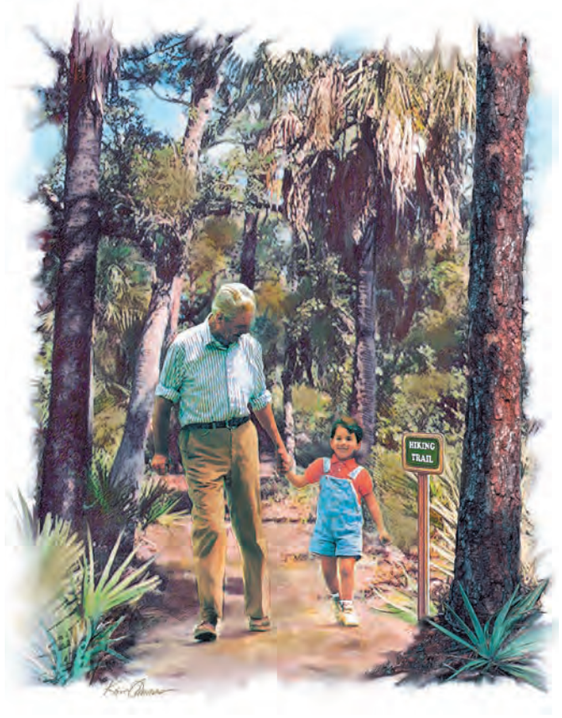

APPENDIX G

FLORIDA PANTHER INFORMATIONAL PAMPHLET

You live in Florida panther country

Florida panthers are reclusive and rarely seen by people. They normally live in remote, undeveloped areas. However, as the number of people in southern Florida grows, there is an increased chance of an encounter with a Florida panther.

This brochure contains some guidelines to help you live safely in Florida panther country.

Keep children within sight and close to you, especially outdoors between dusk and dawn.

If you feel threatened by a panther, or have lost pets or livestock to a panther, please call the Florida Fish and Wildlife Conservation Commission's Wildlife Alert Hotline at 1-888-404-FWCC (3922).

If you see a Florida panther

The Florida panther moves primarily at night. The chances of seeing a panther are slim. But if you live in Florida panther country, you need to know what to do if you see one.

- **Keep children within sight and close to you.** Pick up any small children so they don't panic and run. Try to do this without bending over or turning away from the Florida panther.
- **Give them space.** Florida panthers typically will avoid a confrontation. Give them a way to escape.
- **Do not run.** Running may stimulate a panther's instinct to chase. Stand and face the animal. Make eye contact to let the panther know you are aware of its presence.
- **Avoid crouching or bending over.** Squatting or bending makes you look smaller, resembling a prey-sized animal.
- **Appear larger.** Make gestures that indicate you are not prey and that you may be a danger to the panther. Raise your arms. Open your jacket. Throw stones, branches or whatever you can reach without crouching or turning your back. Wave your arms slowly and speak firmly in a loud voice.
- **Fight back if attacked.** There has never been a reported panther attack in Florida. In western states, where attacks by cougars have occurred very rarely, potential victims have fought back successfully with rocks, sticks, caps, jackets, garden tools and their bare hands. Since large cats usually try to bite the head or neck, try to remain standing and face the animal.

7 ways to live safely in Florida panther country

While these guidelines are meant to help you live safely in Florida panther habitat, they also apply to living with more commonly encountered wildlife, including raccoons, snakes, bears and alligators.

1. **Be alert from dusk 'til dawn (and whenever deer are active)**
   Florida panthers primarily are active at night. Exercise more caution at dawn, dusk or dark.

2. **Keep panther prey away**
   Deer, raccoons, rabbits, armadillos and wild hogs are prey for the Florida panther. By feeding deer or other wildlife, people inadvertently may attract panthers. Do not leave potential wildlife food outside, such as unsecured garbage or pet food. Consider fencing vegetable gardens.

3. **Keep pets secure**
   Free-roaming pets, or pets that are tethered and unfenced, are easy prey for predators, including panthers. Bring pets inside or keep them in a secure and covered kennel at night. Feeding pets outside also may attract raccoons and other panther prey; do not leave uneaten pet food available to wildlife.

Keep your pets safe and secure. Bring pets inside or keep them in a secure and covered kennel at night.

Keep livestock safe and secure.

4. **Keep domestic livestock secure**
   Where practical, place chickens, goats, hogs or other livestock in enclosed structures at night. Electric fencing can be an effective predator deterrent.

5. **Landscape for safety**
   Remove dense or low-lying vegetation that would provide hiding places for panthers and other predatory animals near your house.
   - Remove plants that deer like to eat.
   - Choose plants that do not attract deer or other panther prey species. For information on plants that deer do not like to eat, visit edis.ifas.ufl.edu/UW137.
   - Appropriate fencing will make your yard or play area uninviting to prey animals such as deer.

6. **Consider other deterrents**
   Outdoor lighting, motion sensors and electric fencing also may deter prey animals and panthers from entering your yard. Outdoor lighting also will make approaching prey and panthers more visible to you.

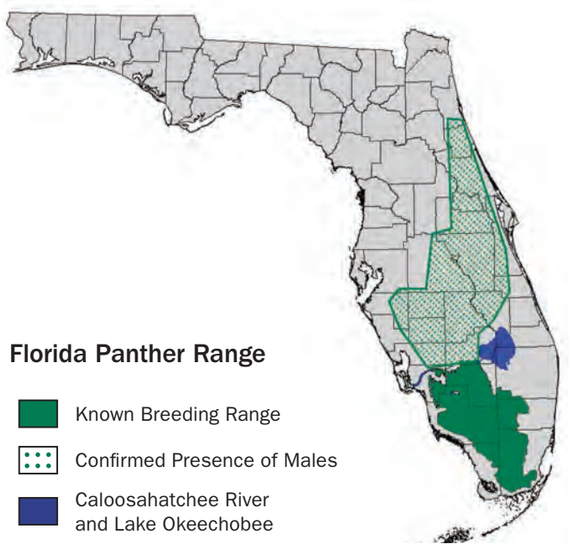

7. **Hike or bike with a friend**
   When recreating outdoors, it's a good practice to let friends or family know your whereabouts and when you expect to return. Better yet, take a friend with you!

Florida panther facts

- The Florida panther is a subspecies of puma, also known as a mountain lion or cougar. It is the last subspecies still surviving in the eastern United States.
- Biologists estimate roughly 100-160 adult and subadult Florida panthers remain in the wild. Most panthers live in southwest Florida, south of the Caloosahatchee River, although some panthers have been documented traveling as far north as central Georgia.
- The Florida panther's decline occurred prior to 1950, when it still was legal to hunt panthers. It was listed as endangered in 1967 and is protected under federal and state laws.
- Florida panther numbers declined to roughly 30 cats by the early 1980s. Severe inbreeding resulted in many health and physical problems. A genetic restoration project in 1995 was successful in improving the genetic health and vigor of the panther population.
- Florida panthers are found primarily in the Big Cypress/Everglades ecosystem in Collier, Lee, Hendry, Monroe and Miami-Dade counties.
- Florida panthers' home range sizes vary by sex and by individual. Female home ranges are typically 60-75 square miles whereas males' are typically 160-200 square miles.
- There is no record of a Florida panther attacking a person. Florida panthers are rarely seen.
- The biggest threat to the future of the Florida panther is habitat loss. A number of panthers also die each year due to vehicle strikes on roadways.
- The Florida panther was chosen as the State Animal of Florida in 1982 by a vote of elementary school students throughout the state.

FWC panther team

This brochure was produced through a partnership of the Audubon Society of Florida, Conservancy of Southwest Florida, Defenders of Wildlife, Florida Fish and Wildlife Conservation Commission, Florida Wildlife Federation, Friends of the Florida Panther Refuge, Mountain Lion Foundation, National Park Service, National Wildlife Federation, Seminole Tribe of Florida, University of Florida and the U.S. Fish and Wildlife Service.

Funding provided by the Florida Fish and Wildlife Conservation Commission, Friends of the Florida Panther Refuge and the National Fish and Wildlife Foundation.

APPENDIX H

EASTERN INDIGO SNAKE INFORMATIONAL PAMPHLET

Killing, harming, or harassing indigo snakes is strictly prohibited and punishable under State and Federal Law.

Only individuals currently authorized through an issued Incidental Take Statement in association with a USFWS Biological Opinion, or by a Section 10(a)(1)(A) permit issued by the USFWS, to handle an eastern indigo snake are allowed to do so.

LEGAL STATUS: The eastern indigo snake is classified as a Threatened species by both the USFWS and the Florida Fish and Wildlife Conservation Commission. "Taking" of eastern indigo snakes is prohibited by the Endangered Species Act without a permit. "Take" is defined by the USFWS as an attempt to kill, harm, harass, pursue, hunt, shoot, wound, trap, capture, collect, or engage in any such conduct. Penalties include a maximum fine of $25,000 for civil violations and up to $50,000 and/or imprisonment for criminal offenses, if convicted.

August 12, 2013

ATTENTION:

THREATENED EASTERN INDIGO SNAKES MAY BE PRESENT ON THIS SITE!!!

Please read the following information provided by the U.S. Fish and Wildlife Service to become familiar with standard protection measures for the eastern indigo snake.

IF YOU SEE A LIVE EASTERN INDIGO SNAKE ON THE SITE:

- Cease clearing activities and allow the eastern indigo snake sufficient time to move away from the site without interference.
- Personnel must NOT attempt to touch or handle snake due to protected status.
- Take photographs of the snake, if possible, for identification and documentation purposes.
- Immediately notify supervisor or the applicant's designated agent, **and** the appropriate U.S. Fish and Wildlife Service (USFWS) office, with the location information and condition of the snake.
- If the snake is located in a vicinity where continuation of the clearing or construction activities will cause harm to the snake, the activities must halt until such time that a representative of the USFWS returns the call (within one day) with further guidance as to when activities may resume.

IF YOU SEE A DEAD EASTERN INDIGO SNAKE ON THE SITE:

- Cease clearing activities and immediately notify supervisor or the applicant's designated agent, **and** the appropriate USFWS office, with the location information and condition of the snake.
- Take photographs of the snake, if possible, for identification and documentation purposes.
- Thoroughly soak the dead snake in water and then freeze the specimen. The appropriate wildlife agency will retrieve the dead snake.

USFWS Florida Field Offices to be contacted if a live or dead eastern indigo snake is encountered:

North Florida ES Office – (904) 731-3336
Panama City ES Office – (850) 769-0552
South Florida ES Office – (772) 562-3909

DESCRIPTION: The eastern indigo snake is one of the largest non-venomous snakes in North America, with individuals often reaching up to 8 feet in length. They derive their name from the glossy, blue-black color of their scales above and uniformly slate blue below. Frequently, they have orange to coral reddish coloration in the throat area, yet some specimens have been reported to only have cream coloration on the throat. These snakes are not typically aggressive and will attempt to crawl away when disturbed. Though indigo snakes rarely bite, they should NOT be handled.

SIMILAR SNAKES: The black racer is the only other solid black snake resembling the eastern indigo snake. However, black racers have a white or cream chin, thinner bodies, and WILL BITE if handled.

LIFE HISTORY: The eastern indigo snake occurs in a wide variety of terrestrial habitat types throughout Florida. Although they have a preference for uplands, they also utilize some wetlands and agricultural areas. Eastern indigo snakes will often seek shelter inside gopher tortoise burrows and other below- and above-ground refugia, such as other animal burrows, stumps, roots, and debris piles. Females may lay from 4 - 12 white eggs as early as April through June, with young hatching in late July through October.

1.0 INTRODUCTION

This report documents the Lee County Protected Species Survey conducted by Passarella & Associates, Inc. (PAI) at Daniels Parkway South (Project). Protected species were also documented during other fieldwork on the Project site. The protected species survey was conducted to meet the requirements of the Lee County Land Development Code (LDC) Chapter 10, Article III, Division 8 (Protection of Habitat) Standards.

The Project totals 1,233.08± acres and is located in Sections 8, 9, 16, 17, and 21; Township 45 South, Range 26 East, Lee County (Figure 1). The site is bordered to the north by Daniels Parkway, to the east by single-family residential development and undeveloped land, to the west by a Florida Power & Light (FPL) transmission line and undeveloped land, and to the south by Lee County's Wild Turkey Strand Preserve.

2.0 LAND USES AND VEGETATION ASSOCIATIONS

Vegetation and land cover mapping for the Project was conducted using a Lee County 2020 rectified aerial (Appendix A). Groundtruthing of the vegetative communities was conducted by PAI in January 2020 utilizing the Florida Land Use, Cover and Forms Classification System (FLUCFCS) Level III (Florida Department of Transportation 1999). Level IV FLUCFCS was utilized to denote disturbance and hydrologic conditions. "E" codes were used to identify levels of exotic and invasive vegetation (e.g., Brazilian pepper (*Schinus terebinthifolia*), melaleuca (*Melaleuca quinquenervia*), West Indian marsh grass (*Hymenachne amplexicaulis*), Wright's nutrush (*Scleria lacustris*), and torpedograss (*Panicum repens*)). AutoCAD 3D 2021 software was used to determine the acreage of each mapping area, produce summaries, and generate the FLUCFCS map for the Project (Appendix A). A total of 50 vegetative and land cover types (i.e., FLUCFCS codes) were identified within the Project area. Table 1 provides the breakdown of the FLUCFCS codes by acreage for the Project, and a description of each of the classifications follows.

Table 1. Vegetative and Land Cover Types by FLUCFCS Code

FLUCFCS Code	Description	Acreage	Percent Total
211	Improved Pasture	473.76	38.4
262	Low Pasture	27.96	2.3
3219 E1	Palmetto Prairie, Disturbed (0-24% Exotics)	3.13	0.3
3219 E2	Palmetto Prairie, Disturbed (25-49% Exotics)	4.15	0.3
3219 E3	Palmetto Prairie, Disturbed (50-75% Exotics)	2.11	0.2
3219 E4	Palmetto Prairie, Disturbed (76-100% Exotics)	0.73	0.1
4119 E1	Pine Flatwoods, Disturbed (0-24% Exotics)	53.32	4.3
4119 E2	Pine Flatwoods, Disturbed (25-49% Exotics)	28.79	2.3
4119 E3	Pine Flatwoods, Disturbed (50-75% Exotics)	2.64	0.2
4119 E4	Pine Flatwoods, Disturbed (76-100% Exotics)	2.87	0.2
4159 E1	Pine, Disturbed (0-24% Exotics)	11.18	0.9

Total		**1,233.08**	**100.0**

Improved Pasture (FLUCFCS Code 211)
The canopy of this land use type is primarily open with scattered cabbage palm (*Sabal palmetto*) and melaleuca. The sub-canopy contains scattered wax myrtle (*Morella cerifera*), live oak (*Quercus virginiana*), cabbage palm, and Brazilian pepper. The ground cover consists of bahiagrass (*Paspalum notatum*), carpetgrass (*Axonopus* sp.), broomsedge (*Andropogon virginicus*), dog fennel (*Eupatorium capillifolium*), grass-leaved goldenrod (*Euthamia graminifolia*), bermudagrass (*Cynodon dactylon*), and tropical soda apple (*Solanum viarum*).

Low Pasture (FLUCFCS Code 262)
The canopy and sub-canopy of this land use type are open. The ground cover includes torpedograss (*Panicum repens*), witchgrass (*Dichanthelium* sp.), dog fennel, marsh pennywort (*Hydrocotyle umbellata*), Wright's nutrush (*Scleria lacustris*), yellow-eyed grass (*Xyris* sp.), melaleuca, and Asiatic pennywort (*Centella asiatica*).

Palmetto Prairie, Disturbed (0-24% Exotics) (FLUCFCS Code 3219 E1)
The canopy of this habitat type is primarily open with scattered melaleuca on the edges. The sub-canopy contains saw palmetto (*Serenoa repens*) and scattered Brazilian pepper. The ground cover includes carpetgrass, chocolateweed (*Melochia spicata*), saw palmetto, and grass-leaved goldenrod.

Palmetto Prairie, Disturbed (25-49% Exotics) (FLUCFCS Code 3219 E2)
This habitat type is similar to FLUCFCS Code 3219 E1, but with 25 to 49 percent melaleuca in the sub-canopy.

Palmetto Prairie, Disturbed (50-75% Exotics) (FLUCFCS Code 3219 E3)
This habitat type is similar to FLUCFCS Code 3219 E2, but with 50 to 75 percent Brazilian pepper and melaleuca in the sub-canopy.

Palmetto Prairie, Disturbed (76-100% Exotics) (FLUCFCS Code 3219 E4)
This habitat type is similar to FLUCFCS Code 3219 E3, but with 76 to 100 percent Brazilian pepper and melaleuca in the canopy and sub-canopy.

Pine Flatwoods, Disturbed (0-24% Exotics) (FLUCFCS Code 4119 E1)
The canopy of this habitat type includes slash pine (*Pinus elliottii*) and live oak. The sub-canopy contains saw palmetto, muscadine grapevine (*Vitis rotundifolia*), slash pine, scattered laurel oak (*Quercus laurifolia*), and widely scattered wax myrtle and melaleuca. The ground cover includes bahiagrass, false fennel (*Eupatorium leptophyllum*), chocolateweed, live oak, little blue maidencane (*Amphicarpum muhlenbergianum*), muscadine grapevine, spermacoce (*Spermacoce verticillata*), broomsedge, and scattered saw palmetto.

Pine Flatwoods, Disturbed (25-49% Exotics) (FLUCFCS Code 4119 E2)
This habitat type is similar to FLUCFCS Code 4119 E1, but with 25 to 49 percent Brazilian pepper in sub-canopy.

Pine Flatwoods, Disturbed (50-75% Exotics) (FLUCFCS Code 4119 E3)
This habitat type is similar to FLUCFCS Code 4119 E2, but with 50 to 75 percent melaleuca and Brazilian pepper in the canopy and sub-canopy.

Pine Flatwoods, Disturbed (76-100% Exotics) (FLUCFCS Code 4119 E4)
This habitat type is similar to FLUCFCS Code 4119 E3, but with 76 to 100 percent melaleuca and Brazilian pepper in the canopy and sub-canopy.

Pine, Disturbed (0-25% Exotics) (FLUCFCS Code 4159 E1)
The canopy of this habitat type contains slash pine and scattered cabbage palm, live oak, and melaleuca. The sub-canopy consists of slash pine, cabbage palm, laurel oak, and widely scattered melaleuca and Brazilian pepper. The ground cover is primarily open with widely scattered spermacoce, muscadine grapevine, and carpetgrass.

Pine, Disturbed (25-49% Exotics) (FLUCFCS Code 4159 E2)
This habitat type is similar to FLUCFCS Code 4159 E1, but with 25 to 49 percent melaleuca and Brazilian pepper in the canopy and sub-canopy and spermacoce in the ground cover.

Pine, Disturbed (50-75% Exotics) (FLUCFCS Code 4159 E3)
This habitat type is similar to FLUCFCS Code 4159 E2, but with 50 to 75 percent earleaf acacia (*Acacia auriculiformis*), Java plum (*Syzygium cumini*), and Brazilian pepper in the sub-canopy and caesarweed (*Urena lobata*) in the ground cover.

Pine, Disturbed (76-100% Exotics) (FLUCFCS Code 4159 E4)
This habitat type is similar to FLUCFCS Code 4159 E3, but with 76 to 100 percent melaleuca in the canopy and sub-canopy.

Brazilian Pepper (FLUCFCS Code 422)
The canopy and sub-canopy of this habitat type contain Brazilian pepper and scattered melaleuca. The ground cover is primarily open and includes earleaf greenbrier (*Smilax auriculata*) and muscadine grapevine.

Melaleuca (FLUCFCS Code 424)
The canopy of this habitat type includes melaleuca and scattered Java plum. The sub-canopy contains Brazilian pepper, melaleuca, Java plum, and widely scattered slash pine, wax myrtle, and cabbage palm. The ground cover includes broomsedge, bahiagrass, dog fennel, spermacoce, cabbage palm, little blue maidencane, and scattered saw palmetto.

Melaleuca, Hydric (FLUCFCS Code 4241)
The canopy of this habitat type includes melaleuca. The sub-canopy contains melaleuca, Brazilian pepper, and cabbage palm. The ground cover includes little blue maidencane, broomsedge, torpedograss, sawgrass (*Cladium jamaicense*), swamp fern (*Telmatoblechnum serrulatum*), swamp flatsedge (*Cyperus ligularis*), Southern beaksedge (*Rhynchospora microcarpa*), Wright's nutrush, false hop sedge (*Carex lupuliformis*), and widely scattered maidencane (*Panicum hemitomon*).

Live Oak, Disturbed (0-24% Exotics) (FLUCFCS Code 4279 E1)
The canopy of this habitat type includes live oak and widely scattered slash pine. The sub-canopy contains scattered saw palmetto, live oak, and American beautyberry (*Callicarpa americana*). The ground cover is primarily open with scattered basketgrass (*Oplismenus* sp.) and caesarweed.

Cabbage Palm, Hydric (50-75% Exotics) (FLUCFCS Code 4281 E3)
The canopy of this habitat type includes cabbage palm. The sub-canopy contains cabbage palm, wax myrtle, and scattered melaleuca. The ground cover includes torpedograss, Wright's nutrush, little blue maidencane, saw palmetto, swamp flatsedge, Asiatic pennywort, marsh pennywort, broomsedge, and dog fennel.

Hardwood/Conifer Mixed, Disturbed (0-24% Exotics) (FLUCFCS Code 4349 E1)
The canopy of this habitat type includes slash pine, live oak, laurel oak, cabbage palm, and widely scattered melaleuca. The sub-canopy contains laurel oak, wax myrtle, Java plum, cabbage palm, slash pine, saw palmetto, live oak, Brazilian pepper, rusty staggerbush (*Lyonia ferruginea*), and widely scattered melaleuca. The ground cover includes carpetgrass, cabbage palm, muscadine grapevine, Asiatic pennywort, caesarweed, earleaf greenbrier, saw palmetto, dog fennel, broomsedge, and spermacoce.

Hardwood/Conifer Mixed, Disturbed (25-49% Exotics) (FLUCFCS Code 4349 E2)
This habitat type is similar to FLUCFCS Code 4349 E1, but with 25 to 49 percent Brazilian pepper in the sub-canopy.

Hardwood/Conifer Mixed, Disturbed (50-75% Exotics) (FLUCFCS Code 4349 E3)
This habitat type is similar to FLUCFCS Code 4349 E2, but with 50 to 75 percent Brazilian pepper in the sub-canopy and caesarweed in the ground cover.

Hardwood/Conifer Mixed, Disturbed (76-100% Exotics) (FLUCFCS Code 4349 E4)
This habitat type is similar to FLUCFCS Code 4349 E4, but with 76 to 100 percent earleaf acacia in the canopy and Brazilian pepper in the sub-canopy.

Mixed Hardwoods, Disturbed (0-24% Exotics) (FLUCFCS Code 4389 E1)
The canopy of this habitat type includes live oak, laurel oak, and scattered cabbage palm. The sub-canopy contains live oak, laurel oak, cabbage palm, and scattered myrsine (*Myrsine cubana*). The ground cover is primarily open with scattered live oak.

Ditch (FLUCFCS Codes 514)
The canopy of this land use type is open. The sub-canopy contains Brazilian pepper, cabbage palm, live oak, and slash pine along the edges. The ground cover includes dotted smartweed (*Persicaria punctata*), torpedograss, Asiatic pennywort, Gulf coast spikerush (*Eleocharis cellulosa*), dwarf papyrus (*Cyperus haspan*), frog fruit (*Phyla nodiflora*), Mexican clover (*Richardia* sp.), and smallfruit primrose willow (*Ludwigia microcarpa*).

Ditch, Hydric (FLUCFCS Code 514H)
This habitat type is similar to FLUCFCS Code 514 with a higher prevalence of wetland vegetation species such as torpedograss.

Cow Pond (FLUCFCS Code 525)
The canopy and sub-canopy of this land use type are open. The ground cover includes scattered torpedograss along the edges.

Mixed Wetland Hardwoods, Disturbed (0-24% Exotics) (FLUCFCS Code 6179 E1)
The canopy of this habitat type includes laurel oak, cabbage palm, slash pine, and scattered bald cypress (*Taxodium distichum*). The sub-canopy contains laurel oak, myrsine, wax myrtle, Brazilian pepper, saltbush (*Baccharis halimifolia*), cabbage palm, and buckthorn (*Sideroxylon reclinatum*). The ground cover includes marsh pennywort, sawgrass, frog fruit, witchgrass, false fennel, broomsedge, little blue maidencane, climbing hempvine (*Mikania scandens*), earleaf greenbrier, Asiatic pennywort, Wright's nutrush, and gulfdune paspalum (*Paspalum monostachyum*).

Mixed Wetland Hardwoods, Disturbed (25-49% Exotics) (FLUCFCS Code 6179 E2)
This habitat type is similar to FLUCFCS Code 6179 E1, but with 25 to 49 percent melaleuca in the canopy and Brazilian pepper in the sub-canopy.

Mixed Wetland Hardwoods, Disturbed (50-75% Exotics) (FLUCFCS Code 6179 E3)
This habitat type is similar to FLUCFCS Code 6179 E2, but with 50 to 75 percent melaleuca in the canopy and Brazilian pepper in the sub-canopy.

Mixed Wetland Hardwoods, Disturbed (76-100% Exotics) (FLUCFCS Code 6179 E4)
This habitat type is similar to FLUCFCS Code 6179 E3, but with 76 to 100 percent Peruvian primrose willow in the sub-canopy.

Cypress, Disturbed (0-24% Exotics) (FLUCFCS Code 6219 E1)
The canopy of this habitat type includes bald cypress. The sub-canopy contains bald cypress, wax myrtle, and scattered Brazilian pepper and melaleuca. The ground cover includes sawgrass, marsh pennywort, little blue maidencane, and scattered West Indian marsh grass and torpedograss.

Cypress, Disturbed (25-49% Exotics) (FLUCFCS Code 6219 E2)
This habitat type is similar to FLUCFCS Code 6219 E1, but with 25 to 49 percent Brazilian pepper in the sub-canopy and torpedograss and West Indian marsh grass in the ground cover.

Cypress, Disturbed (50-75% Exotics) (FLUCFCS Code 6219 E3)
This habitat type is similar to FLUCFCS Code 6219 E2, but with 50 to 75 percent Brazilian pepper and melaleuca in the canopy and sub-canopy and torpedograss and West Indian marsh grass in the ground cover.

Cypress, Disturbed (76-100% Exotics) (FLUCFCS Code 6219 E4)
This habitat type is similar to FLUCFCS Code 6219 E3, but with 76 to 100 percent Melaleuca in the canopy and sub-canopy and torpedograss and West Indian marsh grass in the ground cover.

Pine, Hydric, Disturbed (0-24% Exotics) (FLUCFCS Code 6259 E1)
The canopy of this habitat type includes slash pine and widely scattered cabbage palm and melaleuca. The sub-canopy contains slash pine, wax myrtle, melaleuca, and scattered cabbage palm. The ground cover includes rush fuirena (*Fuirena scirpoidea*), little blue maidencane,

gulfdune paspalum, Asiatic pennywort, sawgrass, Wright's nutrush, corkwood (*Stillingia aquatica*), jointed spikerush (*Eleocharis interstincta*), musky mint (*Hyptis alata*), yellow-eyed grass, Southern beaksedge, rayless goldenrod (*Bigelowia nudata*), and torpedograss.

Pine, Hydric, Disturbed (25-49% Exotics) (FLUCFCS Code 6259 E2)
This habitat type is similar to FLUCFCS Code 6259 E1, but with 25 to 49 percent melaleuca in the canopy and sub-canopy and Wright's nutrush and torpedograss in the ground cover.

Pine, Hydric, Disturbed (50-75% Exotics) (FLUCFCS Code 6259 E3)
This habitat type is similar to FLUCFCS Code 6259 E2, but with 50 to 75 percent melaleuca in the canopy and sub-canopy and Wright's nutrush in the ground cover.

Pine, Hydric, Disturbed (76-100% Exotics) (FLUCFCS Code 6259 E4)
This vegetation community is similar to FLUCFCS Code 6259 E3, but with 76 to 100 percent melaleuca and Brazilian pepper in the canopy and sub-canopy.

Wetland Shrub, Disturbed (25-49% Exotics) (FLUCFCS Code 6319 E2)
The canopy of this habitat type includes scattered melaleuca. The sub-canopy contains wax myrtle, saltbush, and scattered bald cypress and melaleuca. The ground cover includes little blue maidencane, spreading beaksedge (*Rhynchospora divergens*), slender spikerush (*Eleocharis baldwinii*), Tracy's beaksedge (*Rhynchospora tracyi*), and a rush species (*Juncus* sp.).

Freshwater Marsh, Disturbed (0-24% Exotics) (FLUCFCS Code 6419 E1)
The canopy of this habitat type is primarily open with scattered bald cypress and scattered melaleuca on the edges. The sub-canopy contains scattered wax myrtle, corkwood, bald cypress, melaleuca, and widely scattered Carolina willow (*Salix caroliniana*). The ground cover includes dotted smartweed, shortleaf spike sedge (C*yperus brevifolius*), witchgrass, spikerush, sawgrass, maidencane, fireflag (*Thalia geniculata*), sand cordgrass (*Spartina bakeri*), torpedograss, pickerelweed, soft rush (*Juncus effusus*), Wright's nutrush, and West Indian marsh grass.

Freshwater Marsh, Disturbed (25-49% Exotics) (FLUCFCS Code 6419 E2)
This habitat type is similar to FLUCFCS Code 6419 E1, but with 25 to 49 percent torpedograss, Wright's nutrush, and West Indian marsh grass in the ground cover.

Freshwater Marsh, Disturbed (50-75% Exotics) (FLUCFCS Code 6419 E3)
This habitat type is similar to FLUCFCS Code 6419 E2, but with 50 to 75 percent torpedograss, Wright's nutrush, and West Indian marsh grass in the ground cover.

Freshwater Marsh, Disturbed (76-100% Exotics) (FLUCFCS Code 6419 E4)
This habitat type is similar to FLUCFCS Code 6419 E3, but with 76 to 100 percent torpedograss, Wright's nutrush, and West Indian marsh grass in the ground cover.

Wet Prairie, Disturbed (50-75% Exotics) (FLUCFCS Code 6439 E3)
The canopy and sub-canopy of this habitat type include scattered melaleuca. The ground cover contains torpedograss, Wright's nutrush, broomsedge, and Southern beaksedge.

Wet Prairie, Disturbed (75-100% Exotics) (FLUCFCS Code 6439 E4)
This habitat type is similar to FLUCFCS Code 6439 E3, but with 76 to 100 percent torpedograss and Wright's nutrush in the ground cover.

Disturbed Land (FLUCFCS Code 740)
The canopy of this land use type is primarily open with scattered slash pine and cabbage palm. The sub-canopy contains scattered wax myrtle, slash pine, saw palmetto, and Brazilian pepper. The ground cover includes bahiagrass, chocolateweed, lovegrass (*Eragrostis* sp.), broomsedge, and dog fennel.

Disturbed Land, Hydric (FLUCFCS Code 7401)
The canopy of this land use type includes scattered melaleuca, slash pine, and laurel oak. The sub-canopy contains scattered melaleuca and wax myrtle. The ground cover includes torpedograss, yellow-eyed grass, and acute spikerush (*Eleocharis acutangula*).

Spoil (FLUCFCS Code 743)
The canopy of this land use type is open. The sub-canopy contains Brazilian pepper. The ground cover includes bahiagrass, dog fennel, and spermacoce.

Berm (FLUCFCS Code 747)
The canopy of this land use type includes live oak, cabbage palm, slash pine, melaleuca, and Brazilian pepper. The sub-canopy includes live oak, slash pine, Brazilian pepper, and saw palmetto. The ground cover contains caesarweed, muscadine grapevine, dog fennel, cabbage palm, and broomsedge.

3.0 METHODOLOGY AND DISCUSSION

Surveys for Lee County protected species are based on the presence of specific vegetation associations and habitat types, as outlined in the LDC. The frequency of transects performed in these habitats was designed to meet the 80 percent minimum coverage requirement, per the LDC. Table 2 outlines those protected species that may inhabit or utilize particular vegetation associations according to the LDC.

Table 2. Potential Lee County Protected Species by Habitat Type

FLUCFCS Code	Description	Potential Protected Species
211*	Improved Pasture	Gopher tortoise (*Gopherus polyphemus*)
		Burrowing owl (*Athene cunicularia floridana*)
		Crested caracara (Caracara cheriway)
		Florida sandhill crane (*Grus canadensis pratensis*)
		Florida panther (*Puma concolor coryi*)

Table 2. (Continued)

FLUCFCS Code	Description	Potential Protected Species
262*	Low Pasture	American alligator (*Alligator mississippiensis*)
		Florida sandhill crane (*Grus canadensis pratensis*)
		Limpkin (*Aramus guarauna*)
		Little blue heron (*Egretta caerulea*)
		Reddish egret (*Egretta rufescens*)
		Roseate spoonbill (*Platalea ajaja*)
		Snail kite (*Rostrhamus sociabilis*)
		Snowy egret (*Egretta thula*)
		Tri-colored heron (*Egretta tricolor*)
		Wood stork (*Mycteria americana*)
		Everglades mink (*Mustela vison evergladensis*)
3219 E1 3219 E2 3219 E3 3219 E4*	Palmetto Prairie, Disturbed (0-100% Exotics)	Eastern indigo snake (*Drymarchon corais couperi*)
		Gopher frog (*Rana capito*)
		Gopher tortoise (*Gopherus polyphemus*)
		Crested caracara (*Caracara cheriway*)
		Florida sandhill crane (*Grus canadensis pratensis*)
		Southeastern American kestrel (*Falco sparverius paulus*)
		Florida black bear (*Ursus americanus floridanus*)
		Florida panther (*Puma concolor coryi*)
		Beautiful Pawpaw (*Deeringothamnus pulchellus*)
		Curtis Milkweed (*Asclepias curtissii*)
		Fakahatchee Burmania (*Burmania flava*)
		Florida Coontie (*Zamia floridana*)
4119 E1 4119 E2 4119 E3 4119 E4*	Pine Flatwoods, Disturbed (0-100% Exotics)	Eastern indigo snake (*Drymarchon corais couperi*)
		Gopher frog (*Rana capito*)
		Gopher tortoise (*Gopherus polyphemus*)
		Red-cockaded woodpecker (*Picoides borealis*)
		Southeastern American kestrel (*Falco sparverius paulus*)
		Big Cypress fox squirrel (*Sciurus niger avicennia*)
		Florida black bear (*Ursus americanus floridanus*)
		Florida panther (*Puma concolor coryi*)
		Beautiful Pawpaw (*Deeringothamnus pulchellus*)
		Fakahatchee Burmania (*Burmania flava*)
		Florida Coontie (*Zamia floridana*)
		Satinleaf (*Chrysophyllum oliviforme*)

Table 2. (Continued)

FLUCFCS Code	Description	Potential Protected Species
4159 E1 4159 E2 4159 E3 4159 E4*	Pine, Disturbed (0-100% Exotics)	Eastern indigo snake (*Drymarchon corais couperi*)
		Gopher frog (*Rana capito*)

*Habitat surveyed for the species noted, although not required per the LDC.

PAI conducted the protected species survey for 10 days between May 11 and June 24, 2021. A summary of weather conditions during the protected species survey is provided in Table 3.

Table 3. Summary of Weather Conditions for the Protected Species Survey

Day	Temperature (°Fahrenheit)	Wind (mph)	Cloud Cover (Percent)
May 11, 2021	Mid- to High 80s	1-4 ESE	50-75
May 12, 2021	High 80s to Low 90s	9-13 WSW	15-50
May 14, 2021	High 70s to Low 80s	0-8 NE	0-50
May 18, 2021	Low 80s	15-21 ENE	50-75
May 25, 2021	Low to Mid-80s	6-9 NE	25-30
May 26, 2021	Mid- to High 80s	6 SE	50-60
May 28, 2021	Low to Mid-80s	0-7 SSW	0-25
June 11, 2021	Mid-80s to Low 90s	7-9 W	25-45
June 23, 2021	Mid-70s to Low 80s	0-6 S	100
June 24, 2021	Low 70s to Mid-80s	0-6 SE	10-90

The survey utilized meandering pedestrian transects per the WilsonMiller, Inc. methodology. Visibility on the surveyed habitats varied due to the density of vegetation. A summary of the limits of visibility, total length of transects walked, and percent coverage by habitat type is provided in Table 4. An aerial with approximate locations of walked transects and species locations is provided as Appendix B.

Table 4. Summary of Habitat Coverage

FLUCFCS Code	Description	Total Acres	Transect Length (Feet)	Average Visibility (Feet)**	Percent Coverage
211*	Improved Pasture	473.76	103,185	80	80

*Habitat surveyed, although not required per the LDC.
**Average visibility to each side of the transect.

4.0 SURVEY RESULTS

A total of one (1) gopher tortoise (*Gopherus polyphemus*), two (2) crested caracara (*Caracara cheriway*), one (1) Florida sandhill crane (*Grus canadensis pratensis*), five (5) wood storks (*Mycteria americana*), six (6) Big Cypress fox squirrel (*Sciurus niger avicennia*), and Florida panther (*Puma concolor coryi*) tracks were observed on the Project site during the protected species survey. The gopher tortoise, Florida sandhill crane, and Big Cypress fox squirrel are listed as threatened by the Florida Fish and Wildlife Conservation Commission (FWCC) (2021). The crested caracara and wood stork are listed as federally threatened by the FWCC and the U.S. Fish and Wildlife Service (USFWS). The Florida panther is listed as federally endangered by the FWCC and the USFWS. A crested caracara nest was previously documented in the northern portion of the property. This nest was active during the 2020-2021 caracara nesting season. No other listed species nests or nesting activity were observed on the Project during the protected species survey. The locations of the gopher tortoise, crested caracara, crested caracara nest, Florida sandhill crane, wood stork, and Florida panther tracks are depicted on Appendix B.

No Lee County protected plant species were observed on the property during the protected species survey. However, the giant wild pine (*Tillandsia utriculata*), common wild pine (*Tillandsia fasciculata*), Northern needleleaf (*Tillandsia balbisiana*), butterfly orchid (*Encyclia tampensis*), and rigid orchid (*Epidendrum rigidum*) were documented on the site. Although not listed as Lee County protected species, the giant wild pine, common wild pine, and rigid orchid are listed as endangered by the Florida Department of Agriculture and Consumer Services (FDACS). The Northern needleleaf and butterfly orchid are listed by FDACS as threatened and commercially exploited, respectively. The locations of the listed plant species are depicted on Appendix B.

5.0 ABUNDANCE OF PROTECTED SPECIES OBSERVED

Density calculations are provided for each Lee County protected species documented within each habitat type during the protected species survey and additional fieldwork conducted on the Project site. Separate calculations are provided if more than one of the same protected species is observed within different habitat types. Please note that density estimates for are only provided for Lee County protected species.

The Lee County protected species abundance calculations are provided in Table 5, while Table 6 summarizes the protected species survey findings.

Table 5. Lee County Protected Species Abundance Calculations

Protected Species Density = $\{n\ (C)/[L\ (W_1+W_2)]\}\ (43{,}560\ ft^2/ac)$

Where n = number of individuals observed or active plus inactive gopher tortoise burrows
L = length of transect
W_1 = distance of visibility to the right of transect
W_2 = distance of visibility to the left of transect
C = gopher tortoise conversion factor (0.5)*

---

*Used for gopher tortoise calculation only. Conversion only applied when gopher tortoise burrow, not gopher tortoise itself, is documented.

Gopher Tortoise (GT)
FLUCFCS Code 4119 E1
= $\{1\ GT/[(20{,}904\ ft)\ (50\ ft+50\ ft)]\}\ (43{,}560\ ft^2/ac)$
= $\{1/2{,}090{,}400\ ft^2\}\ (43{,}560\ ft^2/ac)$
= $(4 \times 10^{-7}\ ft^2)\ (43{,}560\ ft^2/ac)$
= 0.02 Gopher tortoises / acre

Wood Stork (WOST)
FLUCFCS Code 6419 E3
= $\{5\ WOST/[(7{,}688\ ft)\ (45\ ft+45\ ft)]\}\ (43{,}560\ ft^2/ac)$
= $\{5/691{,}920\ ft^2\}\ (43{,}560\ ft^2/ac)$
= $(7.2 \times 10^{-6}\ ft^2)\ (43{,}560\ ft^2/ac)$
= 0.31 Wood storks / acre

Crested Caracara (CRCA)
FLUCFCS Code 747
= $\{2\ CRCA/[(18{,}133\ ft)\ (40\ ft+40\ ft)]\}\ (43{,}560\ ft^2/ac)$
= $\{2/1{,}450{,}640\ ft^2\}\ (43{,}560\ ft^2/ac)$
= $(1.3 \times 10^{-6}\ ft^2)\ (43{,}560\ ft^2/ac)$
= 0.06 Crested caracaras / acre

Table 5. (Continued)

Crested Caracara Nest (CCNE)

FLUCFCS Code 211

= {1 CCNE/[(103,185 ft) (80 ft+80 ft)]} (43,560 ft^2/ac)
= {1/16,509,600 ft^2} (43,560 ft^2/ac)
= (6 x 10^{-8} ft^2) (43,560 ft^2/ac)
= 0.003 Crested caracara nests / acre

Big Cypress Fox Squirrel (BCFS)

FLUCFCS Code 4119 E1

= {1 BCFS/[(20,904 ft) (50 ft+50 ft)]} (43,560 ft^2/ac)
= {1/2,090,400 ft^2} (43,560 ft^2/ac)
= (4 x 10^{-7} ft^2) (43,560 ft^2/ac)
= 0.02 Big Cypress fox squirrels / acre

FLUCFCS Code 4241

= {2 BCFS/[(52,235 ft) (50 ft+50 ft)]} (43,560 ft^2/ac)
= {2/5,223,500 ft^2} (43,560 ft^2/ac)
= (3.9 x 10^{-7} ft^2) (43,560 ft^2/ac)
= 0.02 Big Cypress fox squirrels / acre

FLUCFCS Code 6179 E1

= {1 BCFS/[(14,204 ft) (40 ft+40 ft)]} (43,560 ft^2/ac)
= {1/1,136,320 ft^2} (43,560 ft^2/ac)
= (8 x 10^{-7} ft^2) (43,560 ft^2/ac)
= 0.04 Big Cypress fox squirrels / acre

FLUCFCS Code 747

= {2 BCFS/[(18,133 ft) (40 ft+40 ft)]} (43,560 ft^2/ac)
= {2/1,450,640 ft^2} (43,560 ft^2/ac)
= (1.3 x 10^{-6} ft^2) (43,560 ft^2/ac)
= 0.06 Big Cypress fox squirrels / acre

Florida Sandhill Crane (SACR)

FLUCFCS Code 211

= {1 SACR/[(103,185 ft) (80 ft+80 ft)]} (43,560 ft^2/ac)
= {1/16,509,600 ft^2} (43,560 ft^2/ac)
= (6 x 10^{-8} ft^2) (43,560 ft^2/ac)
= 0.003 Florida sandhill cranes / acre

Florida Panther Tracks (FPT)

FLUCFCS Code 6419 E4

= {1 FPT/[(55,269 ft) (45 ft+45 ft)]} (43,560 ft^2/ac)
= {1/4,974,210 ft^2} (43,560 ft^2/ac)
= (2 x 10^{-7} ft^2) (43,560 ft^2/ac)
= 0.01 Florida panther tracks / acre

6.0 MANAGEMENT ACTIVITIES

Prior to the issuance of a development order, a protected species management plan per LDC 10-474 will be prepared and submitted to the Department of Community Development as part of the Lee County review process for the Project. The protected species management plan will outline protection measures for the protected species documented on the Project site.

EXECUTIVE SUMMARY

Daniels South is a proposed 1,233-acre residential and commercial development located southeast of the intersection of Daniels Parkway and SR 82. The property spans multiple future land use categories and community planning areas. As a result, a text and map amendment to the Lee Plan and concurrent Mixed Use Planned Development are proposed to establish a uniform development pattern for the overall project.

Due to the proposed amendments within the Density Reduction/Groundwater Resource Future Land Use and Southeast Lee Community Planning Area an integrated surface and groundwater model has been developed to evaluate the current conditions of the property and proposed development. Historic flow patterns in this area were altered by the construction of a farm road during previous agricultural operations on the property. The farm road is a basin divide that hydrologically bisects the property into basins either heading west towards Six Mile Cypress or east and south towards the Estero River. As detailed in the following report, the proposed development provides a hydrologic benefit to the region by providing a man-made conveyance connection between the Six Mile Cypress and Estero River Watersheds. This connection will restore historic surface water flow patterns during high rainfall events, which is consistent with Policy 33.1.4 of the Lee County Comprehensive Plan. The connection will be made via a proposed control structure and 24" conveyance pipe between the two watersheds.

Due to the proximity of the property to the Southwest Florida International Airport and their prohibition on wildlife attractants, large scale flow-way restoration is not proposed. Rather, the existing and extensive network of ditches and berms that partition the wetland systems on-site and a historic farm road which bisects the property and reduces hydrologic connectivity are proposed to be removed within the development area. After removal of the berms and ditches, the former farming infrastructure will be re-graded to match the adjacent natural grade and planted with native vegetation.

To evaluate the surface water conditions for the project, pre-development and post development surface water analysis were developed for 2.33 year, 10 year, 25 year, and 100 year rainfall events. The conclusions of the integrated model demonstrate that there is capacity for the project to convey stormwater during events that exceed the SFWMD 10-year 1-day storm event and in a direction that reflects historic flow patterns. Historic flow patterns would have allowed the surface flow to cross watershed basin divides during high rainfall events. The maximum discharge rate of the entire site will be reduced while maintaining historic flow patterns ensuring no adverse impacts to nearby properties. The 2.33-year 1-day modeling shows that wetland hydroperiods will not be impacted by the proposed project. Additionally, the recharge conditions of the integrated model for the proposed project are greater than Existing Conditions by 94 acre-feet; enhancing water resources through increased groundwater recharge. Therefore, the project is consistent with Lee Plan Policy 1.4.5 and 33.1.7.

INTRODUCTION

Daniels South is a proposed 1,233-acre property located southeast of the intersection of Daniels Parkway and SR82 in Lee County, Florida. At full buildout, the project will consist of a residential community, multiple commercial properties, amenity areas and supporting infrastructure. The existing parcels are composed of existing agricultural lands. Approximately 679.10 acres will be preserved and/or restored to natural upland and wetland habitat. The property is bordered on the north by SR82 which is a defined as an upper end watershed boundary for both the Six Mile Cypress and Estero River watersheds. An existing farm road within the project defines the watershed divide between the two watersheds. The project is further bounded on the west by Daniels Parkway, the east by existing residential lots, and the south by Southwest Florida International Airport.

As a requirement of the concurrent Comprehensive Plan Amendment (CPA2021-00017 & 2021-00018) and Mixed Use Planned Development (DCI2022-00002) applications and to demonstrate consistency with Density Reduction Groundwater Resources Future Land Use, the project must be designed to provide a hydrologic model and report demonstrating interconnecting basins to re-establish historical hydraulic flow-ways. Per Policies 1.45 and 33.1.7 of the Lee Plan, the project must demonstrate potential impacts on surface and groundwater resources have been analyzed utilizing an integrated surface and groundwater model with site specific data. This integrated model has been prepared by Progressive Water Resources and is included as Appendix L of this report.

As part of the Comprehensive Plan Amendment (CPA2021-00017 & CPA2021-00018) a text amendment is proposed to offer a density incentive based upon regional benefits of reducing peak discharge rates and increasing groundwater recharge provided by the project's improvements. These additional benefits include a man-made hydraulic connection at the middle of the project's basin divide line between Six Mile Cypress and Estero River Basins. The connection is intended to partially restore flow patterns that were altered by the construction of a farm road used agricultural activities in the project area. The farm road was constructed along a slightly higher land feature that divided the two watersheds and altered the elevations of the area from historic natural ground conditions. In natural ground conditions, surface water would have the ability to flow across the higher land feature thereby connecting the watersheds during larger rainfall events. This improvement will provide additional flow to the Estero Basin during high run off rainfall events by installing a control structure with a conveyance pipe that will allow surface water to flow across the watershed basin divide. The control structure is set at an elevation above the wet season water table to ensure that wetland surface elevations do not decrease from existing conditions in compliance with policy 126.1.4.

The detailed analysis for the proposed flow-path system considers this man-made hydraulic connection, which is discussed in the Daniels South Proposed Conditions Flow Path Analysis. To evaluate the proposed hydrologic and hydraulic condition of a flow path and the proposed design for those areas, the following hydrological models were conducted:

- **Existing Conditions Hydrologic/Hydraulic 1D Model:**

  The purpose of this model was to determine the existing surface water that discharges off the existing site to the current outfall locations (Six Mile Cypress & Estero River). The Existing Conditions model was established using the Interconnected Channel and Pond Routing, Version 4.07.08, software and simulates the following design storms:

  - 2.33-year 1-day
  - 10-year, 1 day
  - 25-year, 3-day
  - 100-year, 3-day

- **Proposed Conditions Hydrologic/Hydraulic 1D Model:**

  The purpose of this model is to determine the effects of the proposed development to the existing parameters established in the existing model. The model will compare its results to the Existing Conditions model which include max discharge rates, max stages, and flow path conveyance from the Six Mile Cypress Basin to Estero River Basin. The Proposed Conditions model simulates the following design storms:

  - 2.33-year 1-day
  - 10-year, 1 day
  - 25-year, 3-day
  - 100-year, 3-day

MODELING SOFTWARE AND HYDRAULIC/HYDROLOGIC PARAMETERS

The software used to create the hydrologic and hydraulic models is Interconnected Channel and Pond Routing, Version 4.07.08, known as ICPR4. ICPR4 is a fully integrated 1D/2D surface and groundwater modeling platform. ICPR4 is widely used and accepted modeling platform throughout Florida for simulating hydrologic and hydraulic analyses. The ICPR4 platform is not limited with the number of model elements and is therefore well suited to utilize for a detailed model of the existing and proposed infrastructure systems within the Daniels South project boundaries.

Topographic Data Existing Conditions

The first parameter for review is the topographic data available and used for the modeling application. The Existing Conditions model relied on both field surveying using GPS equipment and the latest LIDAR available from Lee County GIS. Elevations within the project boundaries range from 20.24 to 29.08 NAVD. Higher elevations occur on the north side of the project that runs adjacent to SR82 and lower elevations occur in the wetlands. Topographic data indicates that the project area conforms with the watershed delineation for the project area and that the project does not receive discharge from the SR 82 which is the common upstream watershed boundary for the Estero River and Six Mile Cypress watersheds. The topographic data also shows an existing farm road bisecting the project area, which acts as a basin divide between the Estero River and Six Mile Cypress watersheds.

For the Proposed Conditions model, proposed grading for the basins was utilized along with the preliminary grading for the development ponds, including the internal lake excavation areas and detention areas within the development ponds.

Land Use/Land Cover Data

Currently, Daniels South's existing drainage basin is comprised mostly of agricultural fields and as well as forested wetland and indigenous areas which are included with the land use calculations and determination. Overall, the total Existing Conditions basin contains homogenous land use/land cover.

For the Proposed Conditions ICPR model, the land use/land cover data file was defined by the proposed land used based upon the Master Concept Plan for the Daniels South Mixed Use Planned Development Application. The land use/land cover categories include Residential, Commercial, Right-of-Way, Wetlands, Lakes, and Uplands. Although the commercial areas are included within the model, it should be noted that the commercial areas are proposed within the Intensive Development Future Land Use category, which does not require an integrated surface and groundwater model,

Runoff Curve Number

A curve number, which represents the ability of soil to store water, was developed for each existing and proposed drainage basin. The curve number method is a product of the SCS runoff equation, developed by the US Soil Conservation Service, which is the predecessor of the NRCS. The runoff equation takes the total rainfall depth and removes the soil storage using an empirically derived formula to predict how much water will run off of a defined basin. It has many parameters including the depth of the water table with respect to average ground elevation, soil type, compaction and the inclusion of impervious areas. TR-55 is a document produced by SCS that equates certain land uses to certain Curve Numbers based on four categories of soil types and is typically used in most of the country to predict generalized soil storage estimates. In areas governed by the South Florida Water Management District, however, SCS and the District realized that the relatively high water tables encountered in Florida meant that the CN by landuse method from TR-55 was not adequate estimate soil storage. This method normally produced higher values for water storage in soil than were actually being encountered. This lead SCS to develop an alternate method to determine a local CN value that relies on a series of soil storage curves to be used within SFWMD service areas instead. These include soil storage curves for "sandy soils", "flatwoods soils" and "depressional soils". The current process of determining soil storage therefore involves determining the average elevation of that portion of existing ground above the wet season high water table, subtracting that elevation from the WSHWT elevation and applying the resulting depth to one of

three soil storage curves. The resultant curve number from this exercise is then further evaluated against totally impervious areas within the basin to achieve a weighted value that averages areas in the basin that are both pervious and impervious.

Daniel's South Existing and Proposed Conditions curve numbers can be found in Tables 1 & 2 below:

Table 1: Daniels South Existing Conditions Curve Numbers

DANIELS SOUTH EXISTING CONDITIONS CURVE NUMBERS

PRESERVE 2+3	0.41	96.05
PRESERVE 3	0.22	97.83
PRESERVE 4	0.22	97.83
PRESERVE 5+6+7	0.22	97.83
PRESERVE 5	1.26	88.83

In Table 1 of the Existing Conditions, soil storage of the existing wetlands was defined by first determining the area above the wet season water table (WSWT) within the Wetland Basin. This area was

then defined with an average elevation which then was used to define the available soil storage per the USDA's Method. In Table 2 of the Proposed Conditions, since it is assumed, the soil will be compacted, soil storage has been reduced by 25% which is consistent with the methodology requested by SFWMD applicant's handbook.

Time of Concentration

Time of Concentration is another parameter needed to establish the stormwater characteristics of the Project. Time of Concentration is the time required for runoff to travel hydraulically from the most distant point in the watershed to the outlet. Time of concentration vary depending on land characteristics within the respective basin which includes, slope and character of the defined flow path. Time of concentration was established using the Kirpich Equation which studies the flow path length and slope. The Kirpich Equation is as follows:

$$T_c = \frac{0.0078L^{0.77}}{S^{0.385}}$$

Where:
Tc = Time of Concentration (minutes)
L = Length of Flow Path (feet)
S = Slope

Using the above equation Time of Concentration was established for both the Existing and Proposed Conditions and can be shown in Tables 3 & 4:

Table 3: Existing Conditions Time of Concentration

Rainfall Data and Design Storms

Precipitation depths for the 10-year 1 day, 25-year 3 day and 100-year 3-day storm events were obtained specifically for the subject watershed area using the South Florida Water Management Districts Applicants Handbook and applicable Isohyet Curves. The design storm rainfall amounts are shown in the following table:

Table 5: Rainfall Data for Design Storm Events

MODELED RAINFALL DEPTHS		
100y-3d Storm	13.90	inches
25y-3d Storm	10.60	inches
10y-1d	6.50	inches
2.33y-1d	4.50	inches

DANIELS SOUTH EXISTING CONDITIONS MODELING ANALYSIS

As mentioned above, the Project is comprised of existing wetlands and agriculture fields. The various agriculture fields include dividing berms and irrigation ditches that both isolate wetland areas and direct runoff through the site. The Project's existing hydrology conveys stormwater from North to South with the North/South basin divide delineating the stormwater west or east to their respective basin, Six Mile Cypress and Estero River Watersheds.

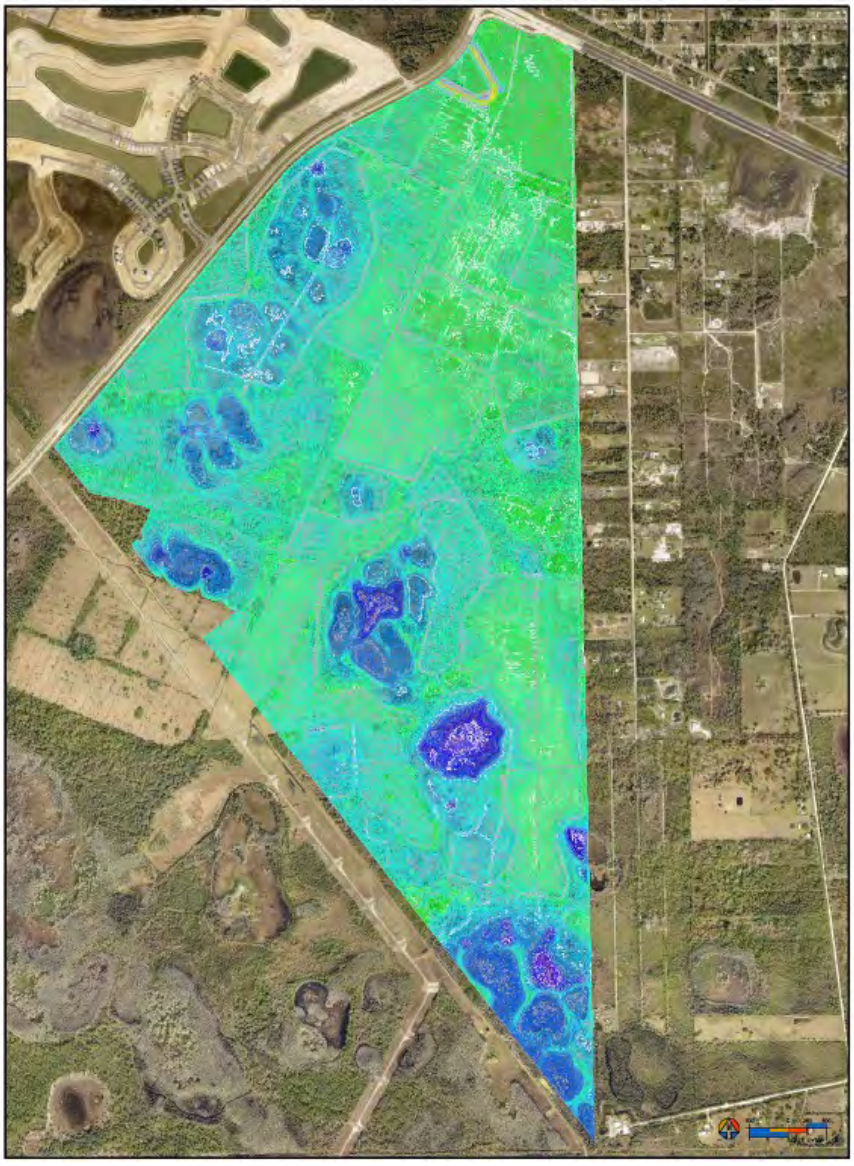

Using field data, LIDAR data, current aerial photographs, on-site observations and SFWMD permit files, the existing property was delineated into sub-basins. A total of 10 sub-basins were established via delineation.

Once the sub-basins were defined, hydrologic characteristics of each basin were defined and quantified, which included land use, curve numbers, time of concentration and surface storage capacity. All the listed items along with rainfall depths were used to establish a rainfall-runoff model for each basin using Interconnected Pond Routing (ICPR4) Software.

ICPR4 Modeling

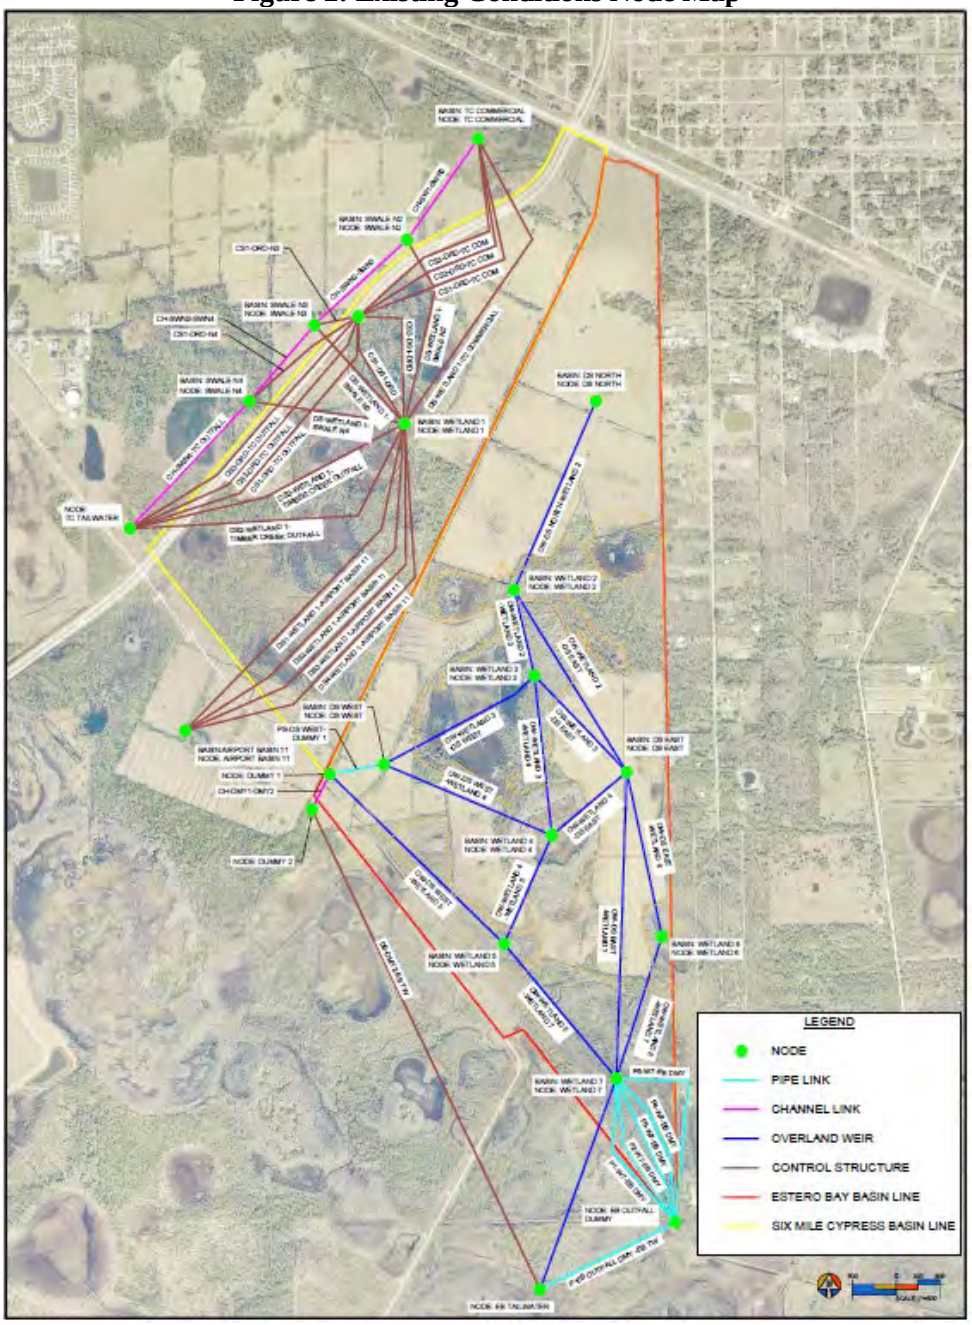

The ICPR4 software was utilized to perform the hydrologic analysis of Daniels South Existing Conditions drainage basin. The modeled rainfall events include the 2.33-year 1-day, 10-year, 1-day, 25-year, 3-day and 100-year, 3-day. Each of the (10) basins were modeled as sperate nodes and were characterized by their determined properties: area, CN, and Time of Concentration. In review of the existing topographic data, it was determined that the sub-basins had areas of run-off storage at specific elevations. The stage-storage volumes were input into the basin characteristics of each of the nodes. Figure 1 provides a graphic of the digital elevation model (DEM) used for the Existing Conditions Analysis where blue colors represent areas below the WSWT, and greens represent areas above the WSWT:

Figure 1: Existing Conditions DEM Model (NAVD 88)

To further analyze the hydrologic conditions of the project, routings were incorporated into the ICPR4 model. Previous SFWMD files for the surrounding parcels along with field reconnaissance and current survey data was used to establish hydraulic networks between each of the sub-basins. Figure 2 below shows the Existing Conditions Node Map (also included in Appendix B):

Figure 2: Existing Conditions Node Map

Outfall Tailwater Conditions

The Existing Conditions model includes (12) offsite connection of which (2) connect to Estero River Watershed and the remaining (10) connect to Six Mile Cypress Watershed. The 2 connections to Estero River Watershed occur on the Southern property line with (1) just east of the basin divide line and the

other at the eastern most point of the property. The connections to Estero River Watershed include existing reinforced concrete pipes that convey stormwater to the offsite wetlands, where stormwater is ultimately conveyed to Estero River.

The Six Mile Cypress Watershed connections consist of existing reinforced concrete pipes and control structures currently in place. The conveyance structures discharge both to the western side of Daniels Parkway to improvements provided by Timber Creek and south to the Airport Basin. From these connection points, the stormwater ultimately discharges to Six Mile Cypress Watershed through a series of existing conveyance ditches and storm pipes.

The boundary nodes for each outfall were set as Time/Stage nodes. The boundary conditions for each Time/Stage node were defined by the Existing Conditions established in existing SFWMD permits for both the Estero River Watershed and the Six Mile Cypress Watershed. The features for the boundary nodes will remain the same in the post development conditions. As such, the defined Time/Stage node for the outfalls will remain consistent in the Proposed Conditions.

ICPR Modeling 1D Results

Based on the modeling results of the Existing Conditions of Daniels South, the peak discharge leaving the site for the 25-year, 3-day storm event was defined as 1019.15 cfs. The maximum discharge rate equates to 921.06 cfs discharging to Estero River Watershed and 98.08 cfs discharging to Six Mile Cypress Watershed. Results are shown in Table 6:

Table 6: Existing Conditions Model Discharge Results

Watershed	Peak Discharge Rate (cfs)
Six Mile Cypress	98.08
Estero River	921.06
Total Peak Discharge	1019.15

The actual peak discharge from the existing property may vary from the modeled results due to the nature of the available data for analysis. In additional, the capacity of the downstream conveyance systems must be a considered factor when evaluating and estimating the existing flows leaving the Project.

DANIELS SOUTH PROPOSED CONDITIONS FLOW PATH ANALYSIS

The surface water management system is designed based on the criteria of the South Florida Water Management District (SFWMD) Environmental Resource Permit (ERP) program and is consistent with the criteria of Part IV of Chapter 373 of the Florida Statutes. The proposed master drainage plan (Appendix A) consists of 14 lakes interconnected to each to other totaling 117 acres of surface area. The proposed lakes attenuate water quantity within the site and provide water quality treatment including reducing nutrient loading of the proposed development. The water quality treatment provide by the lakes will prevent the project from degrading surface water quality and reduce nutrient loading from Existing Conditions which meet the requirements of Policy 125.1.2 and Policy 125.1.3 of the Lee County Comprehensive Plan. The lake elevations have been designed to match or exceed the existing wet season

water elevations as determined by the consulting ecologist for the project, so as to not impact adjacent onsite wetland preserve areas. The water management system discharges in 5 locations into the onsite wetland preserve areas through weirs that control the maximum discharge rate from the developed areas.

The five lakes within the 10,000-foot airport wildlife buffer have been designed to incorporate hardened shorelines and 4:1 slopes without littoral plantings, to minimize wildlife attractive vegetation in those areas which benefits the Southwest Florida International Airport (SWFIA). These five lakes will discharge to lakes outside the 10,000-foot wildlife buffer to ensure that adequate water quality treatment is provided for all areas of the site prior to discharging to the onsite wetlands.

In addition to the water management system, an onsite flow path is proposed for the project area. The proposed flow-path creation plan consists of a piped connection to be located approximately in the middle of the project area currently defined as an existing farm road that divides the Six Mile Cypress watershed from the Estero River watershed. The 24" pipe connection is intended to reestablish a historic flow path that interconnects the two watersheds as identified Lee County's Comprehensive Plan, connecting the two watersheds.

The proposed man-made flow-path connection will allow flow to occur from Six Mile Cypress Watershed to Estero River Watershed in storm events that exceed the 10-year, 1-day storm event. The proposed flow-path connection will allow (restore) stormwater flows from the Six Mile Cypress watershed into the Estero River Watershed during high rainfall events.

The initial step of the analysis involved designing sub-basins within each of the watersheds and identifying where a connection point could occur based on the varying WSWT elevations within each of the Wetlands. The sub-basins that were identified for connection are from "Wetland Preserve 1B" (See Appendix G Proposed Node Map for node locations) in the Six Mile Cypress Watershed to "Preserve 2+3" in the Estero River Watershed in the Proposed Conditions. Wetland Preserve 1B has a control elevation of 25.50' while Preserve 2+3 has a control elevation of 25.32'.

The proposed connection of the man-made flow-path will consist of a control structure weir set at elevation 25.84' on the Six Mile Cypress Watershed side. The proposed connection will be a closed system (i.e. piped), consistent with the request of the SWFIA/Port Authority. The control structure will discharge via a 24" buried pipe to Preserve 2+3 which is on the Estero River watershed side of the project. This proposed buried pipe will not create habitat that could attract wildlife and be aesthetic in character. The control structure elevation is set above the WSWT so as to not draw down the wetland areas (thereby maintaining the wetland hydroperiod) and to prevent surface water from discharging into the Six Mile Cypress basin in low volume rain events. In high rain fall events, the Six Mile Cypress Basin water elevation stages to an elevation slightly higher than the Estero Basin water elevation which is when flow will start occurring into the Estero River Basin. The control structure elevation of 25.84', was determined as the defined elevation of the 10-year, 1 day storm event for the proposed project in Preserve 1B. Figure 4 -Wetland Connection Exhibit, is a schematic depiction of the pipe connection between the watersheds.

Per the above provided information, the proposed flow-path connection discharges when storm events exceed the 10-year, 1 day storm event of elevation of 25.84'. ICPR4 routings of the 25-year, 3-day storm event define a discharge rate of 3.46 cfs of peak flow discharged from the 24" conveyance pipe

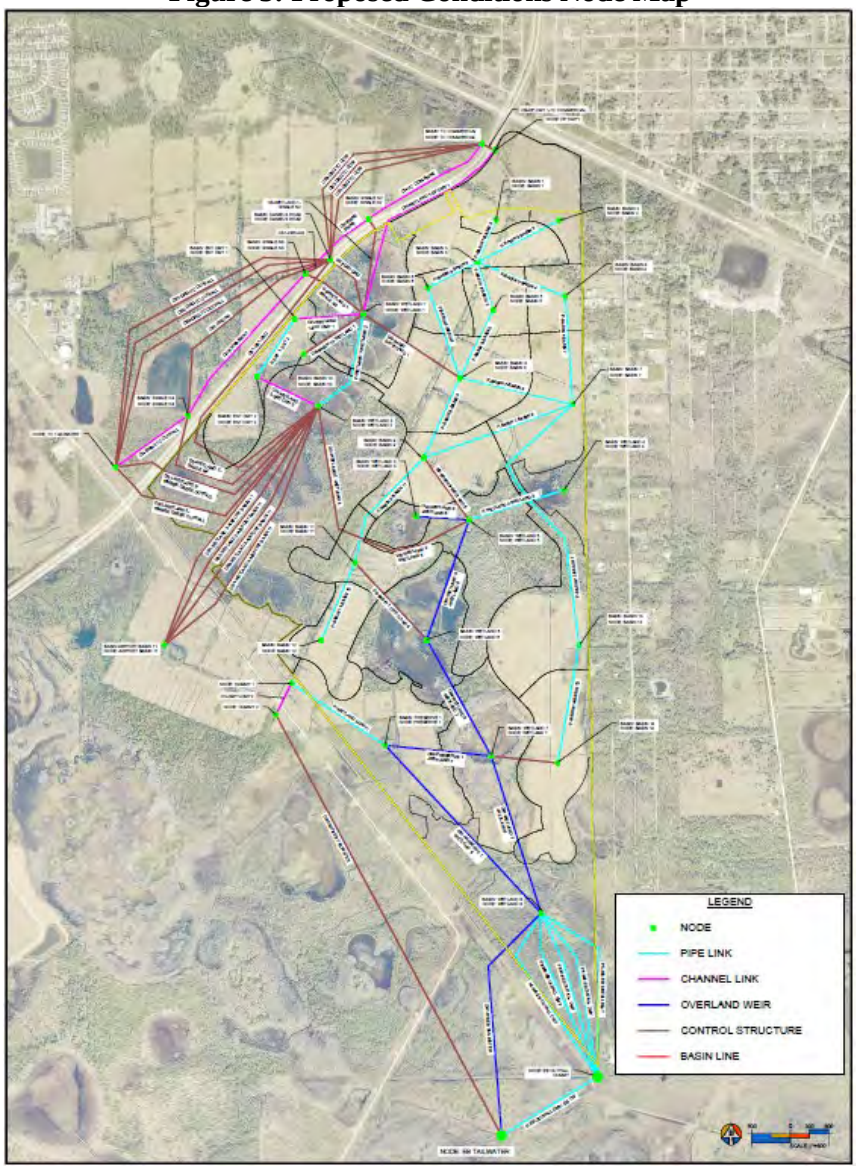

DANIELS SOUTH PROPOSED CONDITIONS MODELING ANALYSIS

ICPR4 software was used to perform hydrologic and hydraulic analysis of the Daniels South Proposed Conditions for the various basins. The modeled rainfall events include the 10-year 1-day, 25-year 3-day, and 100-year, 3-day storm events. Water elevation stages were evaluated for all the above storm events, as well as the peak flow discharge rates of the 25-year, 3-day storm event, which is the criteria of the South Florida Water Management District.

To determine Stage/Storage relationships in each of the defined basins, the environmental professional involved with the project provided wetland elevation data to ensure the proposed project's storage is starting at or above a water elevation consistent with the adjacent wetlands. The onsite portion of the project discharges via 5 discharge points to the various offsite wetlands. Two locations will discharge to the Six Mile Cypress Watershed and three locations discharge to the Estero River Watershed. Various ponds on site within their respective sub-basins will be interconnected by reinforced concrete pipes. Due to the design the lakes within 10,000 Foot airport wildlife buffer, not having littoral plantings, the southern 2 control structures that discharge to Estero River will not begin to discharge to the offsite wetlands until water quality requirements for the project are met in the other lakes of the system.

A Proposed conditions Node Map of Daniels South is shown in Figure 3 (Also included in Appendix G) to better displays the above information:

Figure 3: Proposed Conditions Node Map

As shown in Figure 3, the proposed system incorporates, reinforced concrete pipe, control structures, channels and overland weirs to accurately define the proposed hydrologic and hydraulic conditions.

ICPR Modeling 1D Results

Based on the modeling results of the Proposed Conditions of Daniels South, the peak discharge leaving the site for the 25-year, 3-day storm event was defined as 420.26 cfs. The maximum discharge rate equates to 350.09 cfs discharging to Estero River Watershed and 70.17 cfs discharging to Six Mile Cypress Watershed. Results are shown in the following table:

Table 7: Proposed Conditions Model Discharge Results

Watershed	Peak Discharge Rate (cfs)
Six Mile Cypress	70.17
Estero River	350.09
Total Peak Discharge	**420.26**

The discharge rates in the above table include the wetlands that will remain outside of the proposed developments stormwater management system. Additionally, stages were defined as part of the ICPR4 modeling effort, and the results can be shown in the following table:

Table 8: Proposed Conditions Model Stages

Critical Storm Event Stages		
10 YEAR 1-DAY STORM EVENT		
Basin Name	**Peak Stage (ft. NAVD)**	**Comment**
BASIN 1-9	27.13	MIN. ROAD CROWN 27.14'
BASIN 10	27.65	MIN. ROAD CROWN 27.65'
BASIN 11-12	26.97	MIN. ROAD CROWN 26.97'
BASIN 13-14	27.56	MIN. ROAD CROWN 27.56'
25 YEAR 3-DAY STORM EVENT		
Basin Name	**Peak Stage (ft. NAVD)**	**Comment**
BASIN 1-9	27.79	MIN. BERM ELEV. 27.79'
BASIN 10	28.06	MIN. BERM ELEV. 28.06'
BASIN 11-12	27.67	MIN. BERM ELEV. 27.67'
BASIN 13-14	27.93	MIN. BERM ELEV. 27.93'
100 YEAR 3-DAY STORM EVENT		
Basin Name	**Peak Stage (ft. NAVD)**	**Comment**
BASIN 1-9	28.15	MIN. FF ELEV. 28.38'
BASIN 10	28.31	MIN. FF ELEV. 28.67'
BASIN 11-12	28.04	MIN. FF ELEV. 28.38'
BASIN 13-14	28.23	MIN. FF ELEV. 28.45'

As shown in Table 8, the Proposed Conditions of the onsite development remain consistent with similar projects within the respective Basins the site discharges to. The required elevations shown in Table 8 are consistent with the requirements set forth by South Florida Water Management District and Lee County Land Development Code. The Proposed Project is located within FEMA Flood Zone X; therefore, no minimum elevation is required for the Finish Floors of the future proposed buildings.

EXISTING / PROPOSED CONDITION RESULTS COMPARISON PEAK FLOWS

As indicated previously, the project area is located at the upper end of both the Six Mile Cypress and Estero River watersheds and does not receive flows from upstream properties. As such the proposed project will not cause flooding or other negative impacts to upstream areas consistent with Policies 1.4.5 and 33.1.7.

To evaluate downstream potential impacts, a peak discharge comparison for the Existing Conditions and Proposed Conditions is shown in Table 9 below. The comparison shows that the proposed project will attenuate the 25-year 3-day rainfall event within the proposed onsite water management system and reduce the peak runoff discharge rate from the project limits. By reducing the peak runoff rate, downstream properties from the project will receive flow from the project limits at a slower rate, thereby decreasing the potential of flood conditions and demonstrating consistency with Policies 1.4.5 and 33.1.7

Table 9: Peak Flow Model Discharge Comparison

Watershed	Existing Project Limits - Peak Discharge Rate (cfs)	Proposed Project Limits - Peak Discharge Rate (cfs)
Six Mile Cypress	98.08	70.17
Estero River	921.06	350.09
Total Peak Discharge	**1019.15**	**420.26**

To further demonstrate the proposed project will not increase the potential of flood conditions downstream of the project, a comparison of the 25 year- 3-day peak stage elevations on locations of wetlands area at the south end of the project limits is presented in Table 10 below. The elevations show that stages will not increase in the post development condition and that peak stages in wetland areas near the site discharge location on the site will not increase prior to discharging off site which meets policy 126.1.4.

Table 10: Peak Stage Comparison

Node**	Existing Project Limits Stage Elev (NAVD)	Proposed Project Limits -Stage Elev (NAVD)
Wetland 7 (Exist) Preserve 5+6+7 (Prop)	25.92	25.92

*** Note - wetland areas were relabeled in the model from the Existing Conditions and Proposed Conditions due to Proposed Conditions design creating wetland subbasins. The descriptions in the Table 10 represent the same location on the site.*

WETLAND HYDROPERIOD MODELING

A comparison of wetland hydroperiod stages analysis was prepared based on methodology accepted by the SFWMD. The SFWMD allows for the analysis of wetland areas based on a 2.33 year – 1 day design storm. This storm is intended to more closely mimic the frequent rainfall events that occur annually during the rainy season of this vicinity of Florida. A comparison of pre-development wetland basin peak storm elevations was made with the post-development conditions in the undeveloped wetland areas. The results indicate that a negligible change in peak elevation (less than 0.1 feet) in the post development conditions and this change will not increase the hydroperiod of the wetland system. Wetland hydroperiods for different types of wetlands have durations of 30-180 days. Small changes in the stages of wetland peak storm events will not affect the long hydroperiod of the wetland systems as the peak stages recover to wet season water table over a period of 24-48 hours and the each actual rainfall event varies from year to year.

As previously indicated, the proposed weir that controls surface water discharge between watersheds via a proposed 24" pipe, is set at the stage of the 10-year 1- day storm event. This stage is higher than the 2.33 year 1-day hydroperiod model. As such, runoff will not discharge via the proposed weir for lower rainfall events and therefore the proposed 24" pipe watershed connection will not affect the wetland hydroperiods.

A comparison for peak stages of the wetland areas is in Table 11 below

Table 11: 2.33 Year Peak Stage Comparison Wetland Areas

Node**	Existing 2.33-Year 1-ay Peak Elev (NAVD)	Proposed 2.33 Year-1-Day Stage Elev (NAVD)
Wetland 1 (Exist) Preserve 1A (Prop)	25.75	25.69
Wetland 1 (Exist) Preserve 1B (Prop)	25.75	25.67
Wetland 2 (Exist) Preserve 2-3 (Prop)	25.65	25.56
Wetland 3 (Exist) Preserve 3 (Prop)	25.56	25.53
Wetland 4 (Exist) Preserve 4 (Prop)	25.55	25.49
Wetland 5 (Exist) Preserve 5 (Prop)	25.56	25.48
Wetland 6 (Exist) Preserve 5+6+7 (Prop)	25.55	25.46
Wetland 7 (Exist) Preserve 5+6+7 (Prop)	25.52	25.46
Basin 15 (Exist) Basin 15 (Prop)	25.65	25.68

*** Note - wetland areas were relabeled in the model from the Existing Conditions and Proposed Conditions due to Proposed Conditions design creating wetland subbasins. The descriptions in the Table 10 represent the same location on the site.*

DANIELS SOUTH ICPR 2D INTEGRATED SURFACE AND GROUNDWATER MODEL

2D modeling was also completed for Daniels South utilizing ICPR4 software. ICPR4 utilized the Green Ampt analysis for the 25-year, 3-day rainfall event to analyze recharge volume in the Proposed Conditions. Per the modeling results, the Proposed Conditions groundwater recharge volume is greater than what occurs presently, given the property's Existing Conditions. The Existing Conditions simulates approximately 1,403 acre-ft over a duration of 360 hours, while the Proposed Conditions simulate 1,497 acre-ft, a net increase of 94 acre-ft. The above results indicate that the proposed project will enhance water resources by providing a net benefit in groundwater recharge. The above results are more thoroughly discussed in Progressive Water Resources Integrated Model Analysis dated May 20, 2022, that has been included as Appendix L. Please refer to Appendix L for the complete report.

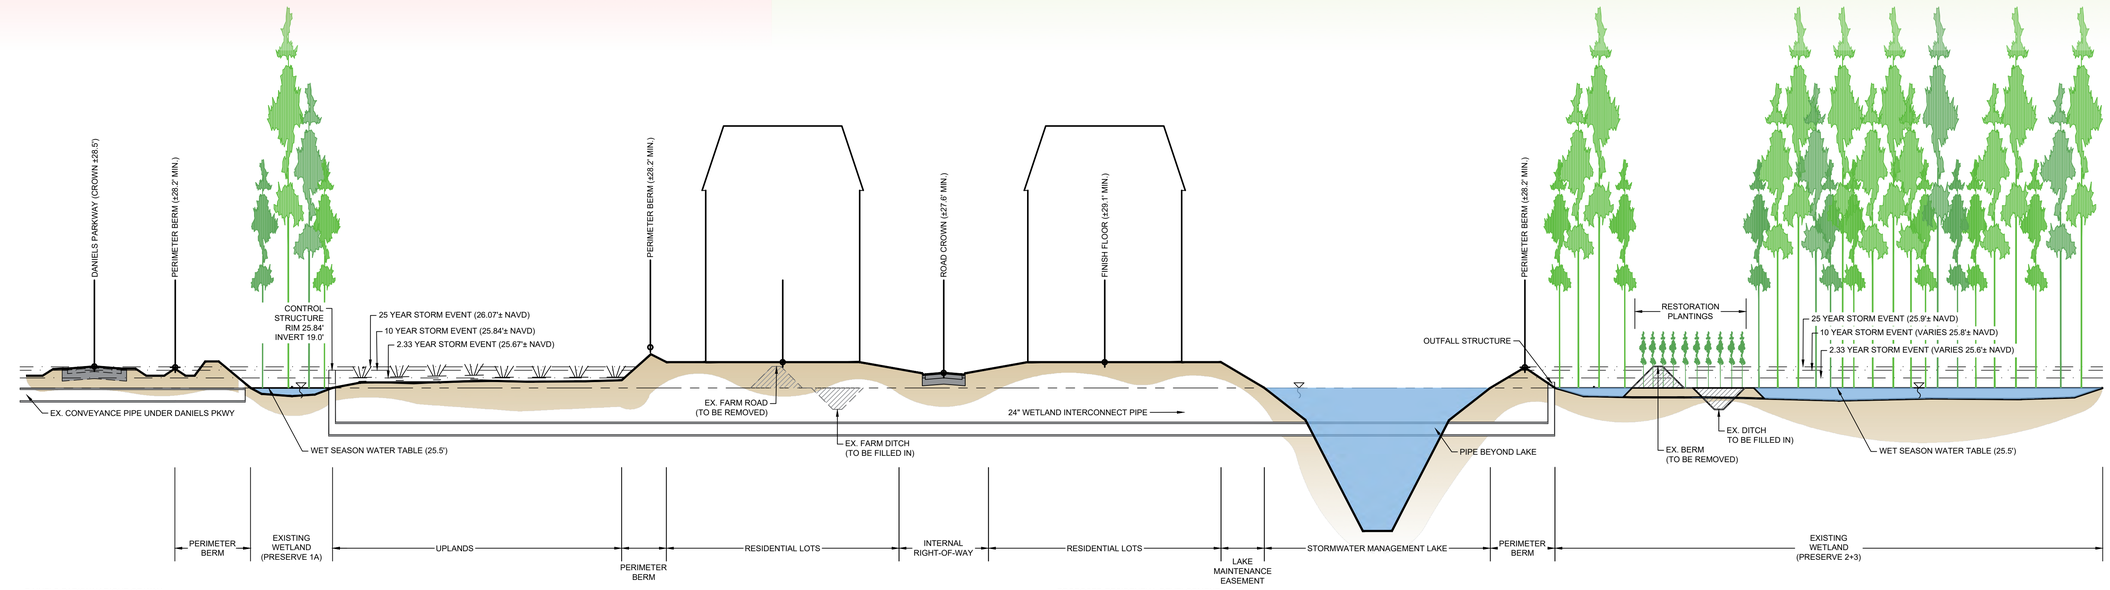

SUMMARY

Based on the above hydrologic and hydraulic analysis of both the Existing Conditions and the Proposed Conditions of Daniels South, there is opportunity for the project to provide a hydrologic benefit to the region by providing conveyance connection between the Six Mile Cypress and Estero River Watersheds, allowing for additional surface water to be conveyed into the Estero River Watershed. The additional surface water to this area is consistent with Policy 33.1.4. The provided analysis shows the potential for the project to convey stormwater to the Estero River Watershed in storm events that exceed the SFWMD 10-year 1-day storm event. Additionally, the proposed project reduces the peak discharge rate of the entire site, including wetlands, while improving historic drainage patterns. The reduction in peak discharge rates show that the proposed surface water management system delays the release of surface water from the project site thereby reducing the potential of flooding to properties downstream. Consistent with Policy 1.4.5 and Policy 126.1.4, the modeling results demonstrate that the proposed system is will not adversely impact upstream or downstream surrounding properties with the approval and construction of Daniels South.

TECHNICAL MEMORANDUM

Date: May 20, 2022

To: Russell Smith, Division Manager Lennar Homes, LLC

From: Peter A. Brown, P.E. & David J. Brown, P.G.

Re: Daniels South Integrated Model Analysis

BACKGROUND

Progressive Water Resources (PWR), a division of RESPEC Company, LLC was engaged by Lennar Homes, LLC (Client) to develop an integrated groundwater / surface water model to assess pre- and post-development groundwater recharge for the proposed Daniels South residential development project. The integrated model is a requirement of The Lee Plan Policy 33.1.7 which states that impacts of proposed land use disturbances on surface and groundwater resources will be analyzed by means of an integrated surface and groundwater model that utilizes site-specific data to assess potential adverse impacts on water resources and natural systems.

The subject property on which the modeling was performed encompasses approximately 1,230-acres and is located at the intersection of Daniels Parkway and State Road 82. Please note that where appropriate, input data used in the integrated model is consistent with the stormwater design parameters utilized by the Engineer of Record (Morris Depew).

ANALYSIS METHODOLOGY

ICPR Version 4.07.08 software was utilized to compare existing and proposed conditions for the project to demonstrate that no adverse impacts on water resources are anticipated to occur. The Existing Conditions model consists of a mixture of upland and wetland areas with no impervious area. Onsite soil parameters were obtained from the Natural Resources Conservation Service (NRCS) soil survey for Lee County with topographic information included in the model based on Lee County LIDAR.

The Proposed Conditions model assumes that 70% of the developable area will be impervious with 29.8% being Directly Connected Impervious Area (DCIA). The Lee County Lidar was updated in the Proposed Model to incorporate the conceptual grading of the stormwater lakes and developable area. As previously stated, the input data for nodes and links are based on the 1D ICPR model developed by the Engineer of Record.

The Green Ampt Method was utilized for onsite basins to integrate surface and groundwater characteristics for both existing and proposed conditions. Simplifications were made to the recharge areas (i.e., stormwater ponds and wetlands) as recommended by the software developer (Streamline Technologies) in order to optimize the triangulation mesh of the 2D overland and 2D groundwater regions. **Figure 1A** below depicts the triangulation mesh for both overland (blue mesh) and groundwater (pink mesh) regions for the Existing Conditions Model along with the onsite ICPR basins and LIDAR terrain. Similarly, **Figure 1B** illustrates the corresponding information for the Proposed Conditions Model. Please note that LIDAR symbology differs in **Figure 1B** due to the incorporation of proposed onsite regrading. However, elevations of undisturbed areas

are the same as Existing Conditions. A 25-year, 3-day event was used to model both conditions (i.e., pre- and post- development) for a simulation time period of 360 hours. ICPR input and summary results are provide in **Appendices A** and **B**.

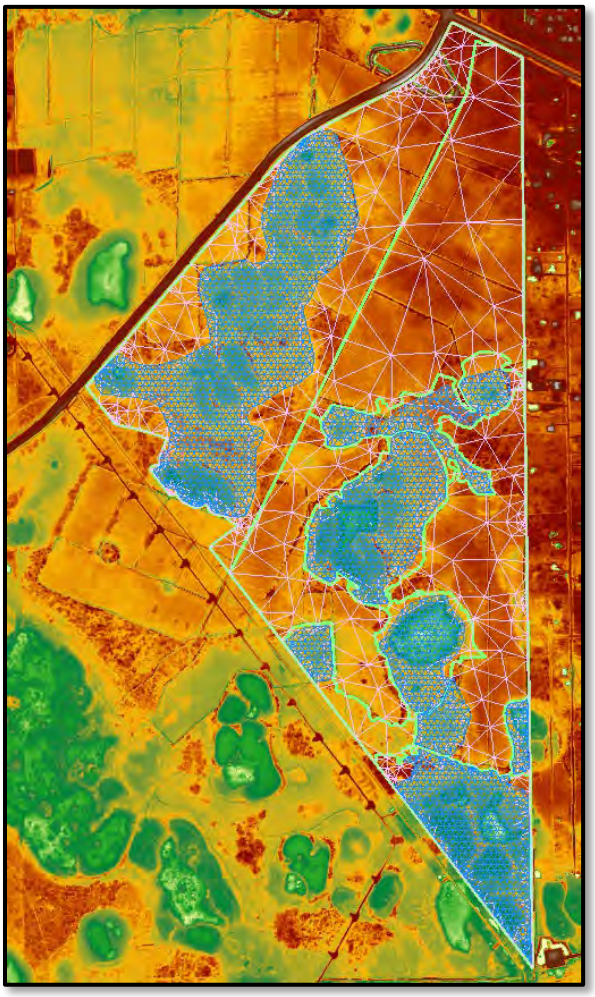

Figure 1A – Existing Conditions Triangulation Mesh

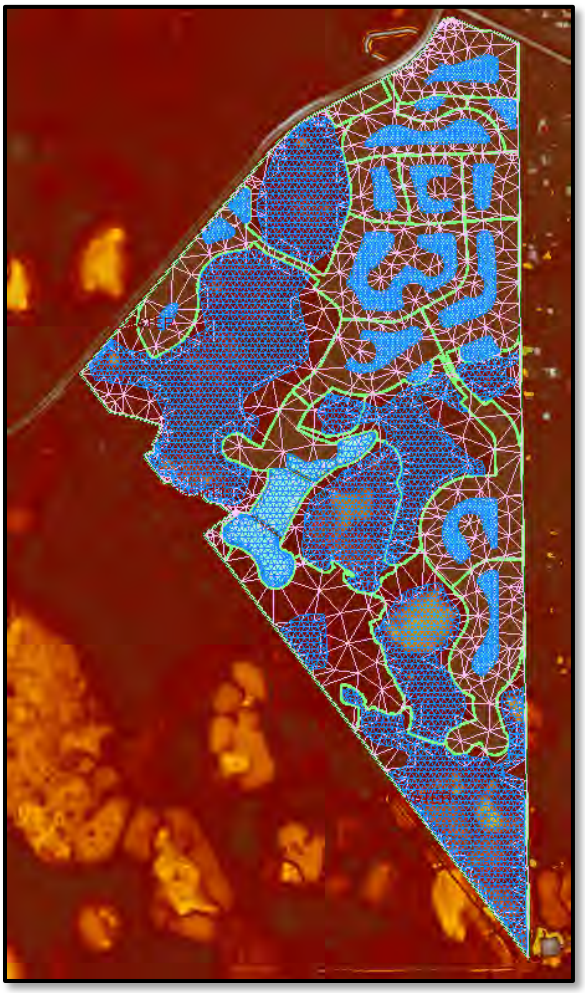

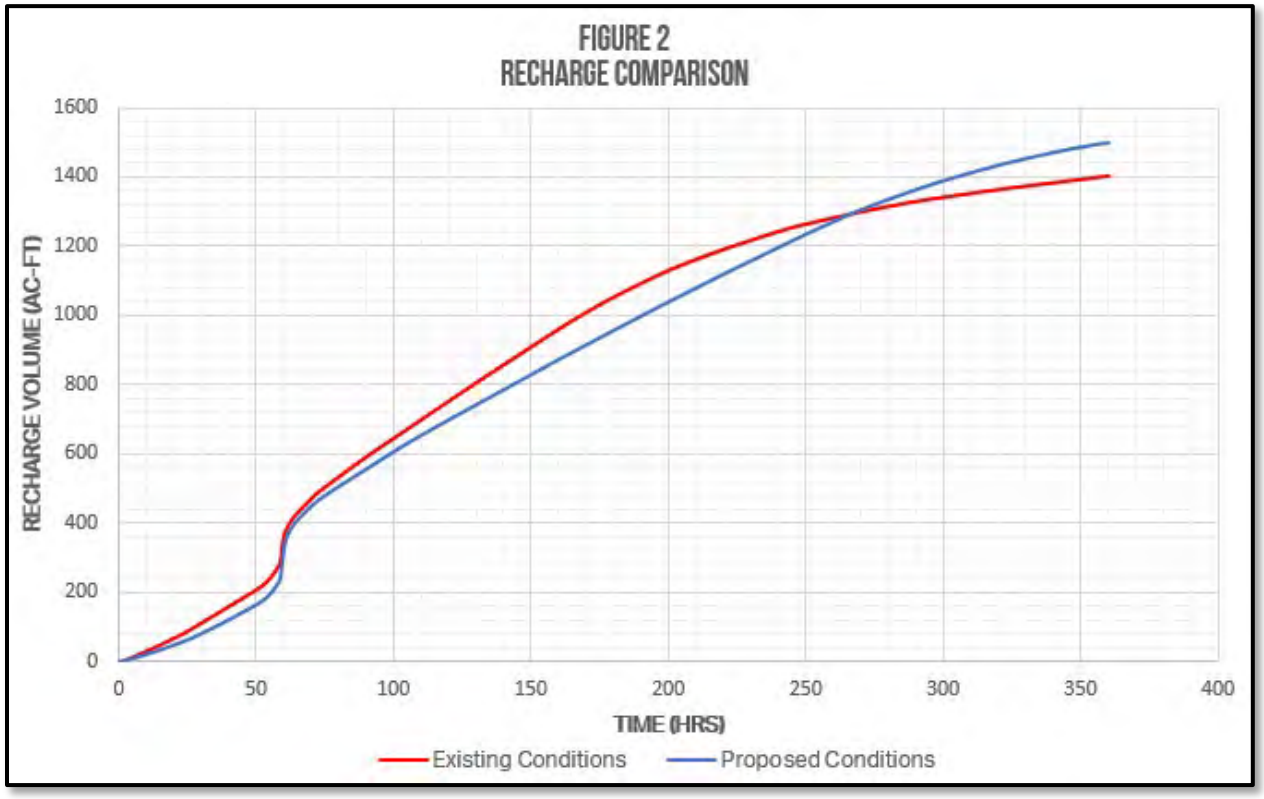

Figure 1B – Proposed Conditions Triangulation Mesh

RESULTS

Based on the results of the ICPR 4 Green Ampt analysis for a 25-year, 3-day rainfall event, the groundwater recharge volume simulated in the Proposed Conditions model is greater than existing conditions. This result indicates a beneficial increase in recharge to the underlying Water Table Aquifer. The existing conditions model simulates approximately 1,403 acre-ft over a duration of 360 hours, while the Proposed Conditions Model anticipates 1,497 acre-ft (net increase of 94 acre-ft). A comparison hydrograph is provided in **Figure 1** below. The results of this integrated analysis demonstrate that over time, the addition of stormwater lakes (wet detention areas) associated with the Daniels South project will enhance water resources by providing a net benefit in groundwater recharge.

Introduction

The proposed Daniels Road South residential development encompasses approximately 1,233 acres and offers a unique opportunity to enhance water resource benefits within the highly disturbed project site. Currently, approximately 553 acres (45 percent) of the property was historically used for farming but is currently characterized as improved pasture and is currently utilized for livestock grazing, while the remainder of the property is composed of pine and oak forest, palmetto prairie, hydric pine, wet prairies and cypress heads. Onsite observations indicate many areas are heavily infested with invasive plants, namely Melaleuca and Brazilian Pepper. Of the 1,233-acre property, approximately 1,149 acres (93 percent) is located within Lee County's Density Reduction/Groundwater Resource (DR/GR) area, as shown in **Figure 1**. The remaining 84 acres, outside of the DR/GR and south of State Highway 82, are within the Central Urban Land Use category. The property is also located north and west of Lee County's Wild Turkey Strand Preserve.

The property has a long history of farming and has been used for agricultural purposes since the late 1950s, resulting in the creation of numerous historic farm roads and agricultural ditches which facilitated drainage of wetlands and other low-lying areas. In addition, the northern section of the site was part of a large World War II military training facility (Buckingham Army Airfield) that constructed multiple triangular-shaped earthen berms located south of Highway 82 that were part of facility's aerial gunnery ranges. One of the earthen WWII features occurs on the northern section of property and, along with alterations associated with historic farming operations, contributes to the highly-disturbed nature of the site.

As part of the historic farming operations, a prominent northeast-southwest trending elevated dirt road was constructed that resulted in bifurcating the property's drainage, with the western side of the site draining towards the Six Mile Cypress watershed and the eastern side draining towards the Estero River watershed. Onsite observations indicate that the area west of the divide, constituting approximately 415 acres, or 34 percent, remains hydrologically separated from lands to the east and can conceivably be considered as "orphaned" from the balance of the DR/GR. Natural surface water flows originating from the western section of the property also appear constrained by Daniels Parkway. Given the totality of hydrologic alterations that have occurred onsite, the proposed Daniels Road South development offers a unique opportunity to re-establish hydrologic connections that will facilitate hydrologic communication between the orphaned western section of the property with the balance of DR/GR to the east.

Consistent with the proposed hydrologic restoration of the site, the development's proposed irrigation system will seasonally offset proposed groundwater use with surface water stored in dedicated stormwater-wet detention lakes. Irrigation quantities are proposed to be regulated by a centrally-controlled irrigation system whereby individual homeowners are prevented from altering the initiation and duration of irrigation events. The conjunctive use of both ground and surface water supplies significantly reduces groundwater demands when adequate surface water supplies are available (i.e., post-rainy season). Achieving the hydrologic restoration of the property, while conserving water resources, is consistent with Lee Plan policies and goals, and when coupled with the management practices proposed herein, provides a framework of protection measures that enhance and safeguard the water resources of the DR/GR.

In accordance with Lee County's Comprehensive Plan (The Lee Plan), proposed developments within the DR/GR must demonstrate the protection, preservation, and enhancement of groundwater resources and environmental (wetland) systems. As demonstrated herein, the Daniels Road South project offers several important water resource protection measures that will result in the following Water Resource Benefits to the DR/GR:

Water Resource Benefits

- The total proposed lawn and landscape area within the Daniels Road South development is approximately 95 acres and represents a decrease of approximately 458 acres (79 percent reduction) as compared to existing livestock areas.

- The Daniels Road South development will utilize both groundwater and captured stormwater for irrigation, whereby groundwater quantities from the Sandstone Aquifer are used to supplement surface water irrigation supplies within the project's stormwater management system lakes. Irrigation quantities will then be withdrawn from the lakes to irrigate lawn and landscaped areas. The proposed conjunctive use of both ground and surface water is anticipated to conserve groundwater supplies that would otherwise have to be withdrawn from the Sandstone Aquifer. When adequate surface water supplies are available, groundwater usage will be reduced, or possibly eliminated, thereby furthering the project's resource benefits within the DR/GR.

- The project includes a master-controlled irrigation system that will regulate the initiation and overall duration of irrigation events in order to increase irrigation water use efficiency and enhance water conservation (i.e., no individual homeowner will have access to irrigation timers). Evapotranspiration sensors are also proposed for each irrigation pump station and future plans may include an integrated communication system between the controller clocks and the irrigation pump station(s).

- Currently there is little, if any, stormwater attenuation or treatment onsite. Improved surface water quality is anticipated through the creation of numerous interconnected stormwater management system lakes.

- Integrated surface and groundwater modeling indicates that the proposed stormwater management system enhances recharge to the underlying aquifers thereby improving hydrologic conditions within the DR/GR.

- Only professional landscape businesses registered with Lee County will be allowed to perform their services at the Daniels Road South development. Proof of completion of a Lee County-approved Best Management Practices (BMP) training program will be required.

- To further protect the water resources, the Daniels Road South project includes surface water quality monitoring of the proposed internal stormwater lakes to document that no adverse surface water quality conditions will occur as a result of the proposed change in land use.

Collectively, these Water Resource Benefits represent a high level of water resource and environmental protection and, in many cases, exceeds the future land use requirements contemplated by Lee County's Comprehensive Plan. For ease of use and understanding, the contents of the Daniels Road South ELMP contain Sections that address key water resource protection elements, with each of the main ELMP Sections in turn having Subsections that provide specificity regarding the management actions necessary to safeguard the water resources. Where applicable, BMPs are provided to highlight specific water resource protection measures.

Proposed Deviations from Lee County Land Development Code

A portion of the subject property is within the 10,000-foot Airport Wildlife Hazard Protection Zone for the Southwest Florida International Airport. FAA Advisory Circular 150/5200-33B, published August 28, 2007, provides guidance on land uses that have the potential to attract hazardous wildlife on or near public airports and requires 10,000 feet of separation are provided from hazardous wildlife attractants. The advisory also states under the summary for "New storm water management facilities" that "to facilitate the control of hazardous wildlife, the FAA recommends the use of steep-sided, rip-rap lines, and narrow, linearly shaped water detention basins." In addition, the summary states "all vegetation in or around detention basins that provide food or cover for hazardous wildlife should be eliminated." Therefore, the following deviations are incorporated into the ELMP.

1. Deviation from Section 10-329(d)(4) which requires the shorelines of excavations for retention and detention areas to be sloped at a ratio not greater than six horizontal to one vertical from the top of bank to a water depth of two feet below the dry season water table TO PERMIT the shorelines of excavations for retention and detention areas within the Airport Wildlife Hazard Protection Zone ("AWHPZ") to be sloped at a ratio of four horizontal to one vertical from the top of bank to a water depth two feet below the dry season water table with enhanced slope protection measures to be proposed by the project engineer at the time of development order to prevent erosion and scouring. Within the AWHPZ acceptable enhanced slope protection measures may include, but are not limited to, use of an appropriate geosynthetic turf reinforcement mat or similar shoreline stabilization technique and might include hardened structures such as those identified in Section 10-418(3). The design technique(s) used will be determined at the time of development order by the project engineer upon approval by the Director based upon evaluation of site-specific conditions at that time.

2. Deviation from Section 10-418(2) & (3) which require a planted littoral shelf for all surface water management systems to mimic the function of natural systems TO PERMIT those surface water management systems within the Airport Wildlife Hazard Protection Zone to eliminate the planted littoral shelf requirement.

3. Deviation from Section 10-418(2)(d)(3) which limits substitution of native wetland trees to 25 percent of the required number of herbaceous plants TO PERMIT substitution for 100 percent of the required number of herbaceous plants to be native wetland shrubs.

4. Deviation from Section 10-418(3) which limits Bulkheads, Geo-textile tubes, riprap revetments or other similar hardened shoreline structures to 20 percent of an individual lake shoreline and these structures cannot be used adjacent to single-family residential uses TO PERMIT that Bulkheads, Geo-textile tubes, riprap revetments or other similar hardened structures may be used for 100 percent of an individual lake shoreline and may be used adjacent to single-family uses.

Section 1. Historic Surface Water Hydrology

To better understand the proposed water resource management actions contained within this ELMP, it is important to provide a basic context of the historic, pre-development surface water flows on the property. The project site generally exhibits a relatively flat topographic relief, with the highest naturally-occurring land surface elevation of approximately 27 feet NAVD88 located on the northeastern portion of the property, immediately south of Highway 82. The lowest land surface elevations are located to the south and southeast at approximately 21 feet NAVD88.

Prior to agricultural development, the subject property was predominantly characterized as open rangeland and pine flatwoods, interspersed with shallow freshwater forested/shrub and emergent wetlands. Prior to any anthropogenic disturbances, 1944 historic aerials indicate the presence of semi-connected wetland features as shown in **Figure 2**. Development of agricultural operations at the project site began in the early 1950s and farming activities necessitated the construction of a grid pattern of drainage ditches that eliminated the naturally occurring surface water flow paths as shown in **Figure 3**. In addition, a well-defined access road was constructed to provide year-round access to the farm fields and was significant enough to be identified by the South Florida Water Management District (SFWMD) as a surface water basin divide.

In addition, several historical connecting ditches are evident in and around onsite wetlands and were presumably used to shorten hydroperiods and further facilitate drainage. The existing onsite drainage ditches were used to reduce water table elevations and subsequently lower recharge potential. Depending on the ditch characteristics, such features can negatively impact nearby environmental features (wetlands) and consequently the water resources within the DR/GR. Hydrologic alterations can also favor the growth of exotic and nuisance plant species.

Please note that the Daniels Road South property occurs within a single Water Body Identification (WBID) No. $3258D_3$ (Estero River), which is not impaired as reported by the Florida Department of Environmental Protection (FDEP). It is important to note that the FDEP places the entire property within the Estero River WBID and does not differentiate the site into eastern and western sections.

Given the totality of hydrologic alterations that have occurred onsite, the proposed Daniels Road South development offers a unique opportunity to re-establish hydrologic connections that will facilitate hydrologic communication of the orphaned western section of the property with the balance of DR/GR. The proposed flow-pathway will preferentially allow movement of seasonally high surface waters to be conveyed towards the southeast corner of the property as occurred historically. In addition, the Daniels Road South project aims to eliminate wetland rim-ditching to help restore the wetland systems' hydroperiods.

Section 2. Proposed Water Resources Best Management Practices

As the Daniels Road South project evolves from predominately a "construction phase" to "partial construction" and ultimately to a "post-construction" residential phase, the BMPs must also evolve to maintain water resource protection. Construction completion of the proposed development may take between 5 and 10 years, depending on market conditions. However, the initiation of construction is anticipated to commence prior to the end of 2023. At the onset of development construction, all cattle are proposed to be removed from the site.

A. Construction Phase BMPs

During construction of the proposed development, the greatest potential for impacts is associated with increased turbidity and/or potential spills of fuels/oils (hydrocarbons), otherwise known as Volatile Organic Compounds (VOCs) used to power earthmoving equipment, etc. Specific BMPs associated with the construction phase are provided below. The Developer will be responsible for maintaining compliance with all ELMP BMP requirements until such time that control of the development is transitioned to the Homeowner's Association (HOA) and/or Community Development District (CDD).

1. The site's general contractor shall be responsible for assuring that each contractor or subcontractor evaluates the work area before construction is initiated to determine if site conditions may pose particular problems for the safe and secure handling of any regulated substances.

2. If any regulated substances are stored on the construction site during the construction process, they shall be stored in a location and manner which will minimize any possible risk of release to the environment. There will be no intention to use, handle, produce or store regulated substances in violation of the Lee County Land Development Code Section 14-477, Stormwater Pollution Prevention Plan (SWP3) criteria.

3. Each contractor/subcontractor shall familiarize themselves with the manufacturer's safety data sheet supplied with each material containing a regulated substance and shall be familiar with procedures required to contain and clean up any releases of a regulated substance. Any tools or equipment necessary to accomplish the same shall be available in case of an accidental release.

4. In the event of a spill of a regulated substance, the contractor/subcontractor will immediately notify the Developer, who will in turn notify the Lee County Division of Natural Resources Director at (239) 533-8109 and the Florida Department of Environmental Protection (FDEP) South District Office at (239) 344-5600. Additional measures, such as those described in this ELMP's Section 4 (Part A), may also apply.

5. Upon completion of construction, all unused quantities of regulated substances and their containment systems shall be completely removed from the construction site.

6. Proper turbidity abatement measures, as required by the SFWMD, the Florida Stormwater Sedimentation Control Inspector's Manual standards, and the FDEP National Pollutant Discharge Elimination System (NPDES) permit criteria, will be maintained while construction is ongoing or

until adequate vegetation or other stabilization measures have been established.

B. Post-Construction Phase BMPs

After the Lee County Certificate of Compliance or the SFWMD stormwater management system certification is completed for a particular phase of the development, the primary focus of the ELMP will be maintaining the stormwater management system lakes since all internal runoff will be routed to these features for treatment. It is also anticipated that the Developer will establish and create an HOA and/or a CDD that will be responsible for the operation and maintenance of all aspects of the stormwater management system including the lakes, associated stormwater conveyance and control components, and the flow-path connection in perpetuity. At a minimum, the operation and maintenance of the stormwater management and flow-path system will require compliance with the terms and conditions contained within this ELMP. Additional details on BMPs, including monitoring of surface water, are provided in **Section 3** below.

Section 3. Lake Maintenance

A. General Provisions

Proper lake maintenance is an integral aspect of this ELMP since internal stormwater runoff is directed to these features for treatment and attenuation. As an added protection to underlying groundwater resources, the excavation of the lakes will not penetrate any continuous impervious layer of clay or rock. In addition, the groundwater withdrawn from the proposed (new) onsite Sandstone Aquifer wells will be used to replenish a subset of stormwater lakes as needed for use in the master irrigation system.

As shown in the conceptual layout provided as **Figure 4**, surface water irrigation pumps will "repump" groundwater supplies and retained stormwater (surface water) for the irrigation of the residential development. The recycling of surface water quantities is expected to further improve water quality on the property and maintain high water quality in the lakes. The stormwater lakes must be maintained in perpetuity and the following management actions are proposed. Specific post-construction BMPs are also provided.

B. Deep Lake Management

If any of the Daniels Road South stormwater management lakes are proposed to be constructed deeper than 12 feet in depth. In accordance with Lee County Land Development Code Section 10-329(d) (3), these lakes are designated as "deep lakes" and are subject to specific criteria. Based on Lee County Code, the proposed deep lakes will satisfy the following criteria:

1. The stormwater management deep lakes will not exceed a maximum water depth of 20 feet and will not penetrate any continuous impervious layer of clay or rock.
2. A destratification (i.e., aeration) system will be installed in any lake that exceeds a 12-foot water depth. Documentation that the proposed destratification system is adequately-sized and designed for each lake deeper than 12 feet will be submitted to Lee County for approval. An example of a deep lake aeration device is provided as **Appendix A**.
3. Native shade trees meeting the specifications of Lee County Land Development Code Section 10-420 will be planted around each deep lake perimeter at approximately one tree per 100 feet of lake shoreline measured at the detention lake's water level control elevation. Trees and other plants may be grouped or clustered together around the lake perimeter.
4. The deep lake management techniques, including operation of the destratification system, will be maintained for the life of the stormwater management system and will be recorded in the development's covenants, in accordance with the County Attorney's Office.
5. A post-construction bathymetric survey verifying each deep lake's finished water depth, sealed by a professional surveyor and mapper, will be submitted to Lee County for approval.

C. Nuisance and Exotic Vegetation Control

The HOA and/or CDD will be responsible for the removal (in perpetuity) of all nuisance and exotic vegetation from the stormwater management system as defined by the Lee County Land Development Code.

1. Lakes must be inspected annually and any prohibited vegetation must be removed by the use of hand-clearing or appropriate chemical treatment. Only aquatic- approved compounds may be utilized in the stormwater management system lakes.

2. Herbicides and/or algaecides may only be applied by a licensed professional applicator who meets the requirements of Lee County, and in accordance with manufacturer specifications. All applicable local, state and/or federal guidelines and requirements will also be followed.

D. Littoral Vegetation Preservation

Littoral zone vegetation is required to be installed by the Developer and maintained by the HOA and/or CDD (in perpetuity). Littoral zones provide habitats for wading birds, fish and aquatic invertebrates and also help to stabilize shorelines and reduce lake bank erosion.

1. Littoral plants that die will be replaced in accordance with Lee County Land Development Code requirements. The presence of littoral plants throughout the lakes is desirable and may also help to improve the water quality within the lakes.

2. The spread of littoral plants will be encouraged throughout the designated littoral areas.

3. Mechanical trimming or the use of land-based herbicides on desirable littoral plants is prohibited. Any trimming or removal of vegetation required to promote the survival and viability of littoral vegetation will be performed by hand or by approved aquatic herbicides and methods.

E. Fertilizer Application

Strict adherence will be maintained with Lee County's Fertilizer Ordinance. Individual lot owners are prohibited from applying fertilizer to their lots. Any person(s) applying fertilizers must have received a limited certification in compliance with Florida Statute 482.1562 prior to application of any and all fertilizers. Additionally, fertilizer content and application rate must be in compliance with Lee County's Fertilizer Ordinance. The Lee County Fertilizer Ordinance No. 08-08 is provided as **Appendix B**.

1. All professional landscape businesses must register with Lee County prior to performing landscape fertilization services within unincorporated Lee County.

2. At least one (1) employee of a firm employed to perform landscape fertilization services must be a Certified Professional Landscaper.

3. Proof of completion of a Lee County-approved BMP training program must be provided to the Division of Lee County Natural Resources.

4. At least one (1) BMP-trained employee must be onsite while fertilizers are applied. A registration decal provided by the division must be displayed on all company vehicles.

F. Erosion Protection and Lake Bank Maintenance

Lake banks are susceptible to erosion due to overland flow of stormwater runoff, wave action, and the natural seasonal fluctuation of water levels. Accordingly, lake banks within the project are designed to minimize this potential for erosion.

1. Lake banks will be inspected annually to identify areas of erosion. Once identified, the erosion will be repaired and the source of erosion shall be eliminated, if possible.

2. Where excessive erosion occurs, repair of the lake banks and/or enhancement of stabilization measures may be necessary.

3. No motorized boats will be allowed within any of the onsite stormwater management lakes.

G. Lake Education Program

A narrative explaining the benefits of littoral vegetation, lake maintenance and surface and groundwater quality will be made available to residents.

1. Lake experts will be encouraged to attend the HOA and/or CDD meetings annually to discuss the lake system operation and maintenance requirements.

2. Homeowners will be informed that they are prohibited from removing or trimming littoral vegetation.

3. Additionally, the homeowners will be made aware of the extreme importance regarding any introduction of hazardous materials or substances into the lakes.

H. Pesticide, Herbicide or Fungicide Applications

All applications of pesticides, herbicides, algaecides and/or fungicides shall be applied by a licensed professional applicator, meet the requirements of Lee County, be applied in accordance with the manufacturer's specifications, and shall meet all applicable local, state and/or federal guidelines and requirements. Only approved aquatic herbicides may be used to treat the stormwater management system.

1. Homeowners shall be prohibited from applying pesticides, herbicides and/or fungicides to their lots. These activities will only be performed by certified contractors approved by the HOA and/or CDD.

2. The use of any chemical product in a manner that will allow airborne or waterborne entry of such products into the stormwater management system is prohibited. This requirement shall not apply to the use of chemical agents by certified lake management specialists for the control of algae and nuisance vegetation within the stormwater management system lakes. However, application of such agents shall be in compliance with the requirements of Lee County, applied in accordance with the manufacturer's specifications, and meet all applicable local, state and/or federal guidelines and requirements.

3. Pesticides, fungicides and herbicides will be used only in response to a specific problem and in the manner and amount recommended by the manufacturer. Broad application of pesticides, fungicides and herbicides as a preventative measure is prohibited.

I. Southwest Florida International Airport Land Use Restrictions

As mandated by Lee County Land Development Code, no proposed land use changes can interfere with the safe operation of aircraft originating from, or flying into, the Southwest Florida International Airport, located to the southwest of the subject property. (See the proposed deviations from Lee County's Land Development Code included herein).

1. No land use alterations are allowed within the designated airport exclusion zone that will produce a wildlife attractant hazard that is considered greater than the existing, historic conditions. If such an attractant is identified by the Lee County Port Authority, the landowner will have the full and sole responsibility of eliminating the hazardous situation at their expense.

2. All stormwater management ponds, lakes, canals, conveyances, and other features are to be designed and constructed in accordance with Federal Aviation Administration (FAA) recommendations that discourages wildlife.

3. The use of rock-lined, steep-sided stormwater basins is required within the airport exclusion zone to facilitate the control of potentially hazardous wildlife. The rocks help to hide the water during periods of low inundation and help discourage shoreline vegetation and wildlife foraging along shorelines. Stormwater lakes located within Southwest Florida International Airport's 10,000-foot Hazardous Wildlife Buffer will be maintained free of emergent and submergent vegetation. Vegetation management techniques may include, but are not limited to, hand pulling of vegetation, herbicide application and removal with mechanical equipment.

J. Commercial Area Adjacent to State Highway 82

The lake maintenance requirements and BMPs described within this Section also pertain to the commercial development area located along State Highway 82.

Section 4. Wellfield Protection

A. Green Meadows Wellfield Protection

The Daniels Road South development is located approximately 0.1 miles north of the nearest Lee County Wellfield Protection Zone associated with the Green Meadows Wellfield, located adjacent to the Florida Rock Properties, Inc.'s mining operation, as shown in **Figure 5**. Therefore, additional measures regarding Wellfield Protection are not applicable to this ELMP. The level of water quality assurance offered by this ELMP offers abundant assurance that, in the unlikely event that degradation of water quality or contamination occurs, ample time exists to initiate remedial measures and safeguard Lee County's nearest wellfield. In addition, surface water quality monitoring is also proposed for the Daniels Road South project, as shown in **Figure 6**.

Section 5. Surface Water Quality Monitoring Program

A. General Data Quality Objectives

All surface water quality samples will be collected in accordance with Chapter 62-160, Florida Administrative Code (F.A.C.), and the FDEP's Standard Operating Procedures (SOPs) DEP-SOP-001/01 FQ 1000 Field Quality Control Requirements and FDEP-SOP-001/01 FS 2100 Surface Water Sampling. A summary of the proposed surface water sampling schedule is provided in the attached **Table 1**.

B. Surface Water Monitoring Goals

The purpose of the surface water monitoring program is to assure that surface water coming onto, originating within, and leaving the project meet all applicable requirements of the SFWMD Environmental Resource Permit (ERP) program authorized pursuant to Part IV of Chapter 373, F.S. and all applicable requirements of Chapter 62-302, F.A.C., Surface Water Quality Standards. Additionally, water quality monitoring of the designated stormwater management lakes will verify the efficiency of the ELMP management actions and assure the lakes' health for the residents' enjoyment. Additional surface water quality parameters may be required if the FDEP determines that the sub- watershed or FDEP WBID No. $3258D_3$ becomes impaired. Please note that a single set of project background samples are proposed once the stormwater lakes are constructed and rehydrated. Future monitoring of the proposed stormwater lakes will be compared to and contrasted with the initial background testing results.

C. Surface Water Quality Monitoring

Surface water quality grab samples will be collected per FDEP protocol and analyzed by a NELAC/TNI-certified laboratory. The surface water quality parameters to be tested are listed below and summarized in the attached **Table 2.** In addition, the attached **Table 2** also includes the laboratory's Accuracy, Precision and minimum Method Detection Limit (MDL). Please note that the Practical Quantitation Limit (PQL) for each parameter varies between laboratories, however the PQL typically equates to four times the MDL.

- **Field Parameters – Depth of Water, Dissolved Oxygen, pH, Temperature, Total Dissolved Solids, Turbidity and Specific Conductivity**

- **Lab Parameters – Total Nitrogen, Nitrate and Nitrite, Ammonium, Ammonia, Total Kjeldahl Nitrogen, Total Phosphorus, Chlorophyll-a, and Ortho-phosphate.**

Surface water quality monitoring shall be continued for a minimum of five (5) years after operational completion of the stormwater management system. After five (5) consecutive years of testing, a request for discontinuation or reduction in the monitoring requirements will be proposed to the Lee County Natural Resources Department if it can be demonstrated that the surface water quality is being maintained within applicable State standards.

Section 6. Water Quality Data Reporting and Analysis

Surface water quality data will be submitted to the Lee County Natural Resources Department staff in an approved electronic format within 30 days of receiving results from the contract laboratory if an issue has been detected. Otherwise, data will be submitted annually. The submittal will include all field notes, field and laboratory water quality data results and all previously collected (i.e., period of record) water quality data. The submittals will also include a brief narrative on the most recent sample collection, sample chain of custody, descriptions of any re-testing of erroneous values, and any water quality exceedances.

By **March 1 of each year**, a Water Quality Summary Report for the preceding calendar year shall be supplied to Lee County Natural Resources staff which summarizes the surface water testing results for the development. The results will include a summary table that lists all the field and laboratory parameters for the monitoring locations. Laboratory parameter concentrations that fall below the PQL for that parameter will be reported with no value; however, a value qualifier of "I" (i.e., between the MDL and PQL) or "U" (below the MDL) will be included in the summary table.

All water quality data for the analytes listed in the attached **Table 2** that are detected in concentrations above the laboratory PQL will be reviewed, graphed and statistically analyzed for trends and exceedances above two (2) standard deviations of the mean of all values. Any reported concentrations above the MCL will be clearly identified, as well as remedial actions which were used to timely reduce that particular analyte's concentration. Where appropriate, testing results for constituents already proposed, i.e., Dissolved Oxygen, pH, and Specific Conductance can be compared to Chapter 62-302.530 criteria for Class III waters.

Section 7. Remedial Actions

In the unforeseen event that any significant surface and/or groundwater impacts are identified as a result of a hydrocarbon spill or pesticide/herbicide application at the subject property, the Developer or designee of the HOA and/or CDD will notify the Director of the Lee County Natural Resources Division within no more than 12 hours (or next business day). If a spill or release "presents an immediate threat to human health and/or the environment" then the FDEP Office of Emergency Response (OER) will be contacted within 24 hours. Guidance outlining the definition of a release as well as reporting procedures is presented in the OER webpage located at:

http://www.dep.state.fl.us/per/reportable incident.htm.

The Developer or their successor(s) will coordinate contamination assessment and remediation efforts with Lee County and will comply with applicable local, state and federal permitting requirements. The initial phase of the remediation plan will consider the actions outlined in Section 4 and may consist of additional temporary monitoring wells installed for the short-term temporal monitoring of potential subsurface impacts and to evaluate the horizontal and the vertical distribution of the impacted area. Based on the findings of the initial phase, if necessary, a more comprehensive assessment may be required.

Section 8. In Conclusion

The information and technical requirements in this ELMP are provided to the Developer or designee of the HOA and/or CDD to assist with understanding the importance of a well-maintained and fully-functioning stormwater management system. The stormwater management system lakes within the development are not only required by State law but can also be a source of beauty and enjoyment for the residents while maintaining the value and integrity of the water resources. The Daniels Road South recreated flow-path will enhance and promote increased recharge to the shallow Water Table Aquifer. Therefore, the groundwater resource benefits and the management actions required herein demonstrate an exceptional level of protection, preservation and enhancement of groundwater and surface water resources within the DR/GR.

APPENDIX A

Example of Deep Lake Aeration Device

Vertex Water Features
Pond and Lake Aeration
BOTTOM AERATION

With Vertex MicronBubble™ Technology

AIR3 XL2™

The Vertex Air3 XL2™ pond aerator is a super-efficient, affordable and safe system. In a typical pond, an Air3 XL2™ can aerate approximately 3-4 acres depending on shape, slope, oxygen demand and other factors. A 1/2hp (0.37kW) Brookwood™ SafeStart™ compressor, housed in our rustproof aluminum outdoor cabinet, feeds three bottom mounted CoActive AirStations™ utilizing Vertex's MicronBubble™ technology. The rising force of millions of bubbles circulates the entire water column, entraining bottom water up to the surface allowing vital oxygen to be absorbed and poisonous gasses expelled. With no electricity in the water, Vertex's aeration systems are safe for any type of water recreation.

Our systems have a full 3-year Vertex warranty, excluding wearable parts (air filters and compressor maintenance kits) plus a Limited Lifetime warranty against rust and corrosion on the cabinet, 5-year warranty on the AirStations™ and a 15-year warranty on BottomLine™ supply tubing.

FEATURES

AIRSTATIONXL2™

- Total pumping capacity of up to 11,400 GPM
- Six 9" flexible membrane discs with MicronBubble™ technology
- Shallow water Airstation optional for depths lower than 8'
- Self-cleaning, low maintenance
- Powder-coated stainless steel self-sinking base unit designed to prevent sinking into soft bottom sediments
- 5-year "No Questions" warranty

BROOKWOOD™ COMPRESSOR

- 3-year Vertex warranty, excluding wearable parts (air filters and compressor maintenance kits)
- Vertex SafeStart™ Technology
- UL, 115v or 230v, 35 Max PSI
- Thermal overload protection
- 1/2hp (0.37kW): low electrical costs
- 2-3 year extended duty cycle between scheduled maintenance

QUIETAIR™ CABINET

- Class "A" GFCI protection on all 115v circuits
- Powder coated aluminum for a durable attractive finish
- High capacity 290 CFM fan
- Easy access design with cam lock
- Easy plug-in connection to waterside electrical service
- Disconnect switch
- Heavy duty, light weight mounting pad included
- Sound dampening kit optional
- Limited lifetime warranty against rust

BOTTOMLINE™ TUBING

- Over-sized I.D. for high flow
- Self-weighted for easy installation
- Available in 100' and 500' increments
- 15-year Vertex warranty

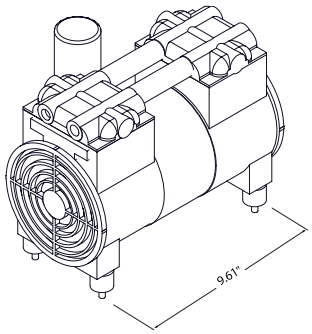

BENEFITS TO THE LAKE

- High pumping rate easily penetrates stratification layers
- Circulates entire water column
- Increases oxygen levels throughout water column
- Promotes beneficial bacteria growth
- Prevents low oxygen fish kills
- Reduces nutrient levels and associated algae growth
- Oxidizes/reduces bottom muck
- Expands oxygenated habitat for improved fisheries
- Reduces aquatic midge and mosquito insect hatches
- Eliminates foul odors from undesirable dissolved gases
- Safe entry – no electricity in the water
- Extremely energy efficient

SPECIFICATIONS: AIR3 XL2™ LAKE AERATION SYSTEM

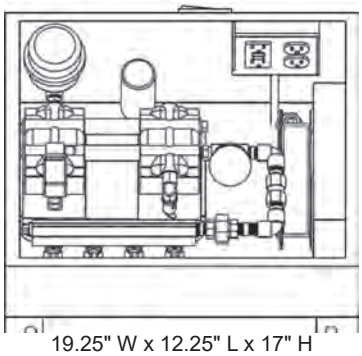

BROOKWOOD™ COMPRESSOR

1/2hp (0.37kW), 115v or 230v, Single Phase piston type compressor. Built for continuous 24/7 operation and equipped with Vertex SafeStart™ technology allowing auto restart under maximum rated pressure without motor damage. Super-duty Brookwood™ compressors incorporate upgraded rotors, stators, valve plates, bearings and capacitors and are thermally protected, oil-free, and require no lubrication; just periodic cleaning of included washable air filter. Extended duty cycle is approximately 2 to 3 years for compressor maintenance, about 2 to 3 times the duty cycle of ordinary piston and rotary vane compressors. All Brookwood™ SafeStart™ compressors carry a 3-year Vertex warranty, excluding wearable parts (air filters and compressor maintenance kits).

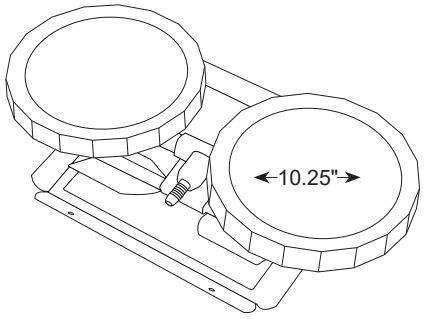

QUIETAIR™ CABINET

Enclosure comes equipped with cam lock for security, fully gasketed and constructed of aluminum with gray electrostatically-bonded powder coating to provide Limited Lifetime warranty against cabinet rust and corrosion. Enclosure furnished with stamped ventilation grills to insure forced air circulation and an integral cooling fan with thermal protection, producing 290 CFM to guard against excessive compressor operating temperatures. Cabinet provided with HDPE mounting pad. Enclosure comes with class a GFCI protection on both the compressor and fan circuits. Quick disconnect switch included. Side mounted muffler box and additional insulation optional for quiter operation.

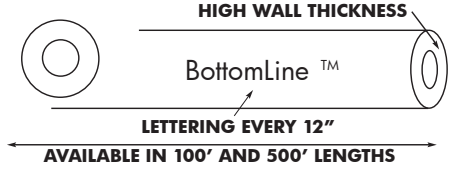

AIRSTATION XL2™ ASSEMBLY

Diffuser station consists of two self-cleaning, 9" diameter, flexible membrane diffusers of EPDM compound with 100% rebound memory, each producing millions of fine 500 to 3000 micron bubbles – the majority 500 to 1000 microns. Each diffuser station base unit is made of powder-coated stainless steel and designed to prevent settling into soft bottom sediments. AIRSTATION™ is designed with adjustable diffuser riser to accommodate any site requirements. AirStations are independently tested and verified to provide stated pumping rates. 5-year warranty.

BOTTOMLINE™ SUPPLY TUBING

Self-weighted, direct burial submersible tubing for connection from compressor to diffuser stations. Tubing is flexible PVC composite construction for use with standard PVC solvent weld cement and insert fittings. Tubing has 0.58" I.D. and high wall thickness for long term durability and protection against punctures. Remains flexible in cold temperatures.

APPENDIX B

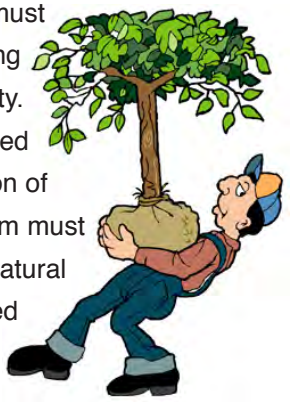

Lee County Fertilizer Ordinance No. 08-08

LEE COUNTY FERTILIZER ORDINANCE (08-08)

APPLICATION: This ordinance applies to anyone performing lawn care and maintenance on turf and/or landscape plants within unincorporated Lee County as a "professional landscape business" or an "institutional landscaper". This ordinance does not apply to individual homeowners who perform their own landscape maintenance.

EFFECTIVE DATE: This ordinance goes in to effect on May 13, 2009.

REGISTRATION:

- All professional landscape businesses must register with Lee County prior to performing landscaping within unincorporated Lee County. At least one (1) employee must be a Certified Professional Landscaper. Proof of completion of a Lee County approved BMP training program must be provided to the Division of Lee County Natural Resources. At least one (1) BMP trained employee must be on site while fertilizers are applied. A registration decal provided by the division must be displayed on all company vehicles. NOTE: An example of a professional landscape business is any company you hire to perform landscaping at your home.
- All institutional landscapers must follow the same registration guidelines as professional landscape businesses with the exception of displaying a registration decal on company vehicles. NOTE: An example of an institutional landscaper is the in-house landscape maintenance staff at Shadow Wood.

TRAINING & CERTIFICATION:

- Florida Green BMP training & certification can be completed through the Lee County Extension Service. This must be done prior to registration.
- Non-professional landscapers are not required to complete the Florida Green BMP training & certification, but are strongly encouraged to participate in the University of Florida IFAS Florida Yards & Neighborhoods Outreach & Public Education Program. This applies to individual owners of single-family residential units who perform lawn care and maintenance on turf and/or landscape plants.

TIMING OF FERTILIZER APPLICATION: Fertilizers containing Nitrogen (N) and/or Phosphorus (P) may not be applied on turf and/or landscape plants from June 1 through September 30.

FERTILIZER CONTENT/APPLICATION RATE:

- Phosphorus (P) in any fertilizer may not exceed a rate of 0.25 lb. per 1,000 sq. ft. per application.
- Phosphorus (P) in any fertilizer may not exceed a rate of 0.50 lbs. per 1,000 sq. ft. per year.
- All fertilizers applied must contain at least 50% slow release nitrogen (N).
- Nitrogen (N) in any fertilizer may not exceed a rate of 4 lbs. per 1,000 sq. ft. per year.

IMPERVIOUS SURFACES: No fertilizers should be deposited, intentionally or accidentally, on an impervious surface such as a driveway, sidewalk or street.

BUFFER ZONES: No fertilizers shall be applied on turf and/or landscape plants within ten (10) feet of a water body, seawall or wetland. (See Florida DEP chapter 62-340)

MODE OF FERTILIZER APPLICATION: When using a rotary spreader, use of a deflector shield is required to deflect fertilizers away from water bodies, seawalls and wetlands.

LOW MAINTENANCE ZONES (NO MOW): A voluntary six (6) foot low maintenance zone is strongly recommended from any water body, seawall or wetland.

GRASS CLIPPINGS/VEGETATIVE MATERIAL: No grass clippings or vegetative materials shall be deposited into storm drains, ditches, water bodies, roadways or other impervious surfaces.

EXEMPTIONS (ordinance does not apply to):

- New landscaping in place for less than sixty (60) days.
- Vegetable gardens as long as they are not within fifteen (15) feet of a water body, seawall or wetland.
- Yard waste, compost or mulches applied to improve the soil.
- Reclaimed water used for irrigation which usually contains high amounts of nitrogen and phosphorus.
- Farm operations.
- Pastures used for grazing livestock.
- Golf courses.
- Specialized turf areas (parks, cemeteries, athletic fields, golf practice areas).

ENFORCEMENT & PENALTIES:

- This ordinance shall be enforced by designated Lee County officials and/or inspectors.
- First violation…$100.00
- Second violation…$250.00
- Third and subsequent violations…$500.00
