1-in-10 Annual Supplemental Crop Requirement = 36.98 inches

Annual Supplemental Crop Water Use:

36.98 inches X 12.76 Acres X 1.18 X 0.02715 MG/AC-IN = 15.12 MG

1-in-10 Maximum Monthly Supplemental Crop Requirement = 4.65 inches

Maximum Monthly Supplemental Crop Water Use:

4.65 inches X 12.76 Acres X 1.18 X 0.02715 MG/AC-IN = 1.9 MG

Notes:

Evapotranspiration was calculated using a modified Blaney-Criddle method.
Average effective rainfall is the amount that is useful to crops in an average year
Drought rainfall is the rainfall minimum representative of a 1-in-10 year drought
Drought effective rainfall is the amount that is useful to crops in a 1-in-10 year drought event.
Average irrigation is the net amount that should be required for maximum yields during an average year.
Drought irrigation is the net amount that should be required for maximum yields during a 1-in-10 year drought.

EXHIBIT

Enhancement for Imperial Marsh Preserve site 93

In addition to onsite enhancements, the applicant proposes to enhance a 20-acre portion of the adjacent Imperial Marsh Preserve to improve the natural communities and wildlife habitat. While much restoration and management have occurred on the preserve, additional enhancements can occur to further improve the preserve.

The applicant proposes to treat the exotic invasive species, concentrating on torpedo grass (*Panicum repens*), a non-native invasive grass, that is currently dominating the wet prairie in the southeastern portion of the preserve. After two successive herbicide treatments, the area will be planted with desirable groundcover vegetation characteristic of a wet prairie. Representatives of the proposed development will work with the Conservation 20/20 natural areas coordinator to ensure that the plants selected are appropriate for current management goals.

Plant material will be 4" liners and may include sawgrass (*Cladium jamaicense*), sand cordgrass (*Spartina bakeri*), panic grasses (*Panicum* sp.), beakrushes (*Rhyncospora* sp.), spike rushes (*Eleocharis* sp.) and smartweed (*Polygonum* sp.) depending on availability. Plants will be installed in areas where needed and not necessarily on-center. The applicant agrees to provide a maximum of $15,000 toward the planting effort.

In addition to the exotic treatment outlined above, the applicant (adjacent property owner) will permit, construct and plant a shallow depression marsh in the southeastern wet prairie as illustrated on the attached enhancement plan. Goals for the basin marsh are to hold water in the wet season, provide deep water pools for wildlife, recharge the groundwater table, reduce the flow to Corkscrew Road ditch and approximate historical flowways. The shallow basin marsh will be similar in function to the one constructed on the preserve near the parking area and will tie into the restoration area of the proposed development. The ditch on the boundary of the two properties will be backfilled and water will be directed onto the preserve to allow for a more historic flow and to reduce flow of water directly into the Corkscrew Road ditch. Cabbage palms and trees will not be removed for basin marsh construction.

Once constructed, supplemental plantings will be provided and planted in the appropriate zone. Vegetation may include pickerelweed (*Pontedaria cordata*), arrowhead (*Sagitarria* sp.), smartweed, bulrush (*Scirpus* sp.) and cordgrass. The applicant agrees to provide a maximum of $1,500 toward the planting effort.

These enhancements are strictly for preserve enhancement purposes and are not being proposed as mitigation for the development.

Indigenous Habitat Management Plan

February 2025
August 2025

Prepared by:

Atwell
4470 Camino Real Way, Suite 101
Fort Myers, FL 33966
(239) 334-3680

Introduction

The 77.94± acre project is located within a portion of Sections 21 Township 46 South, Range 27 East, Lee County, Florida. The parcel is bordered to the north by active farm fields, to the east by privately owned undeveloped land, to the west by undeveloped county land, and to the south by Corkscrew Road.

The applicant proposes to construct a residential community at this location. This will include home sites, an amenity center, roads, a surface water management system, and 42.75± acres of wetland and upland preserves.

The goal of the Indigenous Habitat Management Plan (IHMP) is to enhance the existing uplands and wetlands via exotic control. Exotics (as defined by the Florida Exotic Pest Plant Council's List of Invasive Species, Categories 1 and 2), which are present within the proposed preserves, will be removed to re-establish functional wetland and upland ecosystems. The wetland preservation areas consist of cypress and forested habitats that contain high densities of exotics, primarily Melaleuca. The site development plan was designed to preserve the wetlands and higher quality uplands onsite. Additionally, 11.10 acres of pasture will be restored to native habitat via exotic vegetation treatment and installation of supplemental planting.

The Corkscrew property has the potential to play a significant role in the area's hydrology and wildlife corridor. The project is located adjacent to the Imperial Marsh Preserve, a county owned preserve, which abuts the Corkscrew Mitigation Bank to the west. To the east of the project is the Troyer Brothers preserve land which connects to the Imperial Marsh Preserve to the north.

By restoring and enhancing both upland and wetland habitats, this project will create a critical link that supports regional water hydrology and establishes a managed wildlife corridor, ensuring seamless ecological connectivity across the area.

The current land use practices within the property and exotic vegetation infestation significantly diminish wildlife utilization. This IHMP provides an avenue for the enhancement and preservation of this important piece of land.

Wetland Enhancement

Approximately 23.55 acres of wetlands will be enhanced and preserved as shown on the Indigenous Preserve Areas Map (Figure 1). Exotic vegetation will be treated and/or removed per the Initial Exotic Vegetation Treatment section below. Exotics may be mechanically removed and treated from wetland areas that are currently dominated with exotics and therefore have very few native species present (i.e. polygon currently mapped as FLUCCS Code 619M, 10.75 ac.). The limits of the wetland areas from which exotics will be mechanically removed will be determined based onsite specific conditions at the time of clearing.

After the completion of the initial exotic removal and/or treatment, the enhanced wetlands

FORT MYERS, FL 33908
239.334.3680

will be evaluated for supplemental planting. This planting will focus on the areas that currently contain low densities of native trees (FLUCCS Code 619M). These areas will be planted with cypress and scattered slash pines in a random pattern at densities of approximately 200 trees per acre. If live native trees are present, those trees will count towards the required planting density. Plant material will consist of container grown three gallon trees and will be installed at the beginning of the first wet season following the completion of the initial exotic treatment event (Table 1). In areas with less than 50 percent cover by native wetland ground cover species two complete growing season following the initial exotic treatment, native wetland ground cover species will be installed at densities of 1,742± plants per acre (5± feet on center). The wetlands will also be evaluated at that time for the presence of native shrubs. Areas devoid of native shrubs will be planted with scattered clusters of one gallon shrubs consisting of seven shrubs planted 10 feet on center in each cluster. The final species list will be based upon site specific conditions and on plant material availability at the time of planting.

Table 1. Wetland Plantings

Botanical Name	Common Name	Size	Spacing (feet O.C.)	Estimated Number of Plants

*Additional plant species may be included in the planting table prior to development order approval

Upland Enhancement

Approximately 8.10 acres of uplands will be preserved and enhanced. This consists of upland pine flatwoods that contain moderate densities of exotics. Exotics will be treated as described below. It is anticipated that supplemental planting will not be required for these areas.

Restoration

Approximately 11.10 acres within the preserve were previously cleared and converted to agriculture. The treatment of exotics within the restoration areas will occur as described below. After the completion of the initial exotic removal and/or treatment, these restoration areas will be planted with native trees, shrubs, and groundcover species (Table 2). Plant material will be installed at the beginning of the first wet season following the completion of the initial exotic treatment event. If live native trees are present, those trees will count towards the required planting density. The final species list will be based upon site specific conditions and on plant material availability at the time of planting. The restoration areas will be contoured to allow water to flow from north to south restoring the natural hydrological flow way. Species will be strategically planted throughout the restoration area to increase the rate of survivability. As the contour elevations decrease, species which have a higher tolerance for inundation will be selected for plantings.

Table 2. Restoration Planting

Initial Exotic Vegetation Treatment

All exotic and nuisance species (defined per LDC Sec. 10-420(f) and Category I and II species on the Florida Exotic Pest Plant Council's List of Invasive Species) within the upland and wetland preservation areas will be treated. A vegetation removal permit

associated with the development order is required for the initial exotic vegetation treatment.

Non-native trees and shrubs will be cut by chainsaw or machete just above natural grade and the stump treated with an appropriate herbicide suitable for aquatic application. Treatment will occur immediately following cutting to ensure maximal uptake of the herbicide. All preserved areas will have the resulting vegetative material from the Conservation Easement and disposed of in accordance with local regulations. If non-woody exotics, such as cattail, are present within the preserve they will be treated by a foliar application of an appropriate herbicide suitable for aquatic application. Herbicides will be used in strict accordance with label directions by trained applicators. Care will be taken to reduce damage to non-target native species to the maximum extent practical.
The owner or his designee shall conduct vegetation control through the management of exotic, invasive and nuisance vegetation. Treatment efforts of the forested and herbaceous areas will include removal, monitoring and maintenance of invasive vegetation. The primary species to be eradicated include melaleuca, Brazilian pepper, and torpedo grass.

Exotic control of melaleuca and Brazilian pepper will be accomplished by chainsaw or machete. Large trees (greater than four-inch diameter at breast height (DBH)) may be girdled and killed in place with a stump specific herbicide suitable for aquatic application. The four inch DBH and smaller trees and shrubs will be cut just above natural grade and the stump treated with an appropriate herbicide suitable for aquatic application. The resulting vegetative material will be disposed of by one or more of the following methods: 1) cut into four to six feet sections and stacked on the ground with alternating layers of trees at right angles to each other (log cabin) with the stacks no higher than 5± feet and spaced a minimum of 100± feet apart, 2) cut and placed into piles (tee-pee) with piles spaced a minimum of 100± feet apart, 3) where exotic density is less than 25 percent the exotics may be cut into two to four foot sections and scattered on the ground, and 4) woody exotic vegetation may be removed from the preserves.

Herbicides will be used in strict accordance with label directions by trained applicators. Care will be taken to reduce damage to non-target native species to the maximum extent practical. Access for the initial exotic vegetation treatment to the indigenous vegetation preserves will be via the existing dirt road along the northern property boundary (Figure 1).

Coverage by exotic vegetation within these areas will be maintained below five percent aerial cover. A marker dye will be added to the spray solution to help visualize where the solution is being applied. An appropriately licensed herbicide applicator will supervise the crew. Herbicides will be used carefully in accordance with the label provided.

Barricading
Prior to commencement of construction activities, the preserve areas will be staked in the field and the required erosion control barriers installed. These barriers will be inspected by County staff prior to commencement of construction activities. The operation of

construction equipment, storage of equipment, and stockpiling of fill and construction material will be prohibited within the preservation areas. The staking identifying the limits of the preservation area will be maintained for the duration of adjacent construction activities.

Conservation Easement
A Conservation Easement will be recorded and placed over the upland and wetland preservation areas totaling 42.80± acres. Signage will be posted every 200 feet around the preserve areas (Figure 1). Homeowners will receive a brochure describing the purpose and function of the preserves. Please see the attached sample sign and sample educational brochure (Appendix A).

Monitoring Reports

A Baseline Monitoring Event will be conducted prior to exotic treatment activities within the indigenous vegetation preserves and report submitted to Lee County Division of Environmental Sciences prior to Development Order approval. A Time Zero Monitoring Event will be conducted after completion of those activities within the preserve and the report submitted to Lee County Division of Environmental Sciences prior to issuance of the Certificate of Compliance. In addition, a monitoring report will be submitted annually to the Lee County Division of Environmental Sciences for five consecutive years starting one year from the date of the Certificate of Compliance issued for the project's infrastructure. The reports will document the overall status of the habitat within the indigenous vegetation preserve area. The report will also include photographs documenting the condition of the preserves and any other information relevant to the continued function of the preserve areas.

Wildlife Monitoring
Regular observations of fish and wildlife will be made during all monitoring events by qualified ecologists. This will consist of recording evidence and signs of wildlife (i.e., direct sighting, vocalization, nests, tracks, droppings, etc.).

Photographic Documentation
Permanent fixed-point photograph stations will be established in each of the monitored areas thereby providing physical documentation of the condition and appearance of an area, as well as any changes taking place. Panoramic photographs will accompany vegetation data in each report. Locations of photo stations will remain the same throughout the duration of the monitoring program.

Method and Frequency of Pruning and Trimming

No pruning or thinning of native vegetation within the indigenous vegetation preserves is proposed at this time. In the event that trimming becomes necessary to meet the ecological goals of this management plan, the trimming will be accomplished by hand using chainsaws or machetes and will be restricted to no more than 25 percent of an area during any particular one year interval. Cut vegetation will remain on-site.

The Lee County Division of Environmental Sciences will be notified prior to any preserve maintenance (other than routine annual exotic maintenance events).

Garbage Management

All garbage will be removed from the preserves prior to the issuance of the Certificate of Compliance for any part of the development. The preserves will be surveyed for garbage semi-annually.

Human Wildlife Coexistence Plan

The project is located adjacent to the Imperial Marsh Preserve, which abuts the Corkscrew Mitigation Bank to the west. To the east of the project is the Troyer Brothers preserve land which connects to the Imperial Marsh Preserve to the north. By enhancing and preserving the northern 31.65± acres of native habitat, the onsite preserves will play a critical link in establishing a wildlife corridor between the now bifurcated offsite preserves.

By restoring and enhancing both upland and wetland habitats, this project will create a critical link that supports regional water hydrology and establishes a managed wildlife corridor, ensuring seamless ecological connectivity across the area (Figure 1). The enhanced upland and wetland preserves will allow for species such as the Florida panther (*Puma concolor coryi*) and the Florida black bear (*Ursus americanus floridanus*) to access critical habitat while supporting human wildlife coexistence.

Currently, the offsite preserve lands are divided by the Troyer Brothers property. The restored and enhanced onsite preserve will serve as the vital keystone, reconnecting these fragmented areas and creating a unified wildlife corridor (Figure 2.).

In effort to support human wildlife coexistence, the following brochures describing the purpose and function of the preserves, as well as living with wildlife will be incorporated into the projects Homeowners Association documents. Please see the attached sample educational brochures (Appendix A).

<u>Florida Panther</u>
An educational brochure, such as the attached "A Guide to Living with Florida Panthers" (Exhibit A) prepared by the FWC, will be provided to residents. This brochure provides advise for residents on how to keep their family and pets safe and suggestions on how to handle encounters with panthers.

<u>Florida Black Bear</u>
An educational brochure, such as the attached "A Guide to Living in Bear County" (Exhibit A) prepared by the FWC, will be provided to residents and commercial tenants. Residents will be instructed to contact the FWC for assistance in the event a nuisance black bear is present on-site.

<u>American Alligator</u>
Signs will be posted on the subject property adjacent to the water management lakes and bodies of water advising residents that feeding or harassing the American alligators is

Example Preserve Educational Brochure

Enclave at Corkscrew

Indigenous Preserve Area

In order to enhance and maintain indigenous habitats and associated native wildlife, a preserve area has been established within The Enclave at Corkscrew. The indigenous vegetation preserves within The Enclave at Corkscrew consist of 42.75 acres of upland and wetland preserves. The goal of the indigenous vegetation preserves is to enhance the existing wetlands and uplands via exotic control and supplemental plantings. Preserve areas shall be maintained in a natural state through the treatment of exotic vegetation and periodic maintenance. These areas can be identified by signs which denote them as "Preserve Areas". Please do not disturb these areas or plant any vegetation within their confines.

The upland preserve areas consist of pine flatwoods vegetated by species such as slash pine (*Pinus elliottii*), cabbage palm (*Sabal palmetto*), gallberry (*Ilex glabra*), stagger bush (*Lyonia* sp.), saw palmetto (*Serenoa repens*), and wire grass (*Aristida* sp.). These areas provide important habitat for a variety of wildlife including the northern mockingbird (*Mimus polyglottos*), northern cardinal (*Cardinalis cardinalis*), gray catbird (*Dumetella carolinensis*) and various warblers and woodpeckers.

Small mammals, such as the raccoon (*Procyon lotor*) and nine-banded armadillo (*Dasypus novemcinctus*), and reptiles, such as the southern black racer (*Coluber constrictor*), eastern indigo snake (*Drymarchon corais couperi*), and green anole (*Anolis carloinensis*), may also occur within these pine flatwoods areas.

The forested wetland preserve area consist of cypress that have been invaded by exotics. Native species occurring in this area includes cypress (*Taxodium distichum*), laurel oak (*Quercus laurifolia*), cabbage palm, and swamp fern (*Blechnum serrulatum*). This area provides a natural conveyance of surface waters and habitat to a variety of animals. Wildlife that may utilize these areas includes small animals such as the tree frog (*Hyla* spp.), pig frog (*Rana grylio*), and various snakes.

A variety of birds including the red-shouldered hawk (*Buteo lineatus*), northern mockingbird, northern cardinal (*Cardinalis cardinalis*), bluegray gnatcatcher (*Polioptila caerulea*), and various warblers commonly occur within the forested wetland at various times of the year. Mammals such as the raccoon and rabbit (*Sylvilagus floridanus*) may also be present in the wetland.

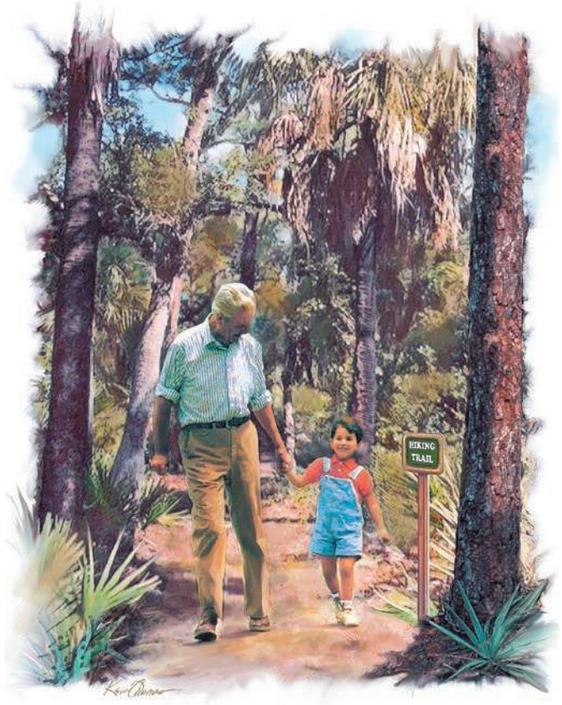
The wetlands and uplands on-site have become invaded by problematic invasive exotic plants. These consist predominately of melaleuca (*Melaleuca quinquenervia*) and Brazilian pepper (*Schinus terebinthifolius*). When exotics dominate native habitats, the naturally occurring flora (plants) and fauna (animals) become displaced. Other functions, such as water filtration and conveyance, can also be altered. Therefore, in order to improve the native habitats being preserved and to comply with State and County requirements, the exotics will be treated. Regular maintenance events will be undertaken to prevent the re-colonization of the preserves by exotics.

Once the exotics are treated in the wetland, habitat will be present on-site for a variety of state and federally protected wading birds including the little blue heron (*Egretta caerulea*), roseate spoonbill (*Ajaia ajaja*), tricolored heron (*Egretta tricolor*), and wood stork (*Mycteria americana*). These birds typically forage in freshwater wetlands throughout southwest Florida. The others wading birds mentioned stalk their prey which are usually small fish, insects, and amphibians. Please do not feed, harm or harass any wildlife.

You live in Florida panther country

Florida panthers are reclusive and rarely seen by people. They normally live in remote, undeveloped areas. However, as the number of people in southern Florida grows, there is an increased chance of an encounter with a Florida panther.

This brochure contains some guidelines to help you live safely in Florida panther country.



Keep children within sight and close to you, especially outdoors between dusk and dawn.

If you feel threatened by a panther, or have lost pets or livestock to a panther, please call the Florida Fish and Wildlife Conservation Commission's Wildlife Alert Hotline at 1-888-404-FWCC (3922).

If you see a Florida panther

The Florida panther moves primarily at night. The chances of seeing a panther are slim. But if you live in Florida panther country, you need to know what to do if you see one.

- **Keep children within sight and close to you.** Pick up any small children so they don't panic and run. Try to do this without bending over or turning away from the Florida panther.
- **Give them space.** Florida panthers typically will avoid a confrontation. Give them a way to escape.
- **Do not run.** Running may stimulate a panther's instinct to chase. Stand and face the animal. Make eye contact to let the panther know you are aware of its presence.
- **Avoid crouching or bending over.** Squatting or bending makes you look smaller, resembling a prey-sized animal.
- **Appear larger.** Make gestures that indicate you are not prey and that you may be a danger to the panther. Raise your arms. Open your jacket. Throw stones, branches or whatever you can reach without crouching or turning your back. Wave your arms slowly and speak firmly in a loud voice.
- **Fight back if attacked.** There has never been a reported panther attack in Florida. In western states, where attacks by cougars have occurred very rarely, potential victims have fought back successfully with rocks, sticks, caps, jackets, garden tools and their bare hands. Since large cats usually try to bite the head or neck, try to remain standing and face the animal.

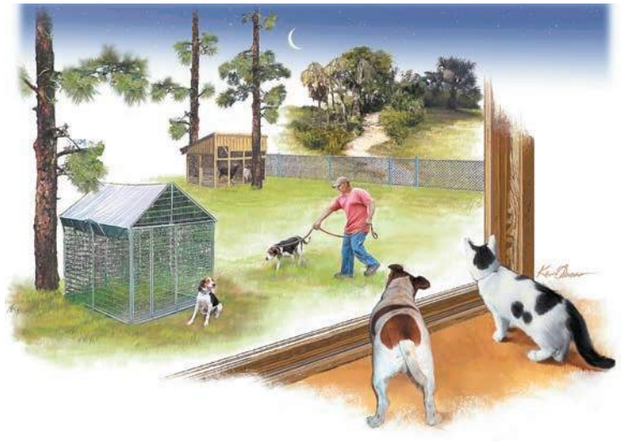
7 ways to live safely in Florida panther country

While these guidelines are meant to help you live safely in Florida panther habitat, they also apply to living with more commonly encountered wildlife, including raccoons, snakes, bears and alligators.

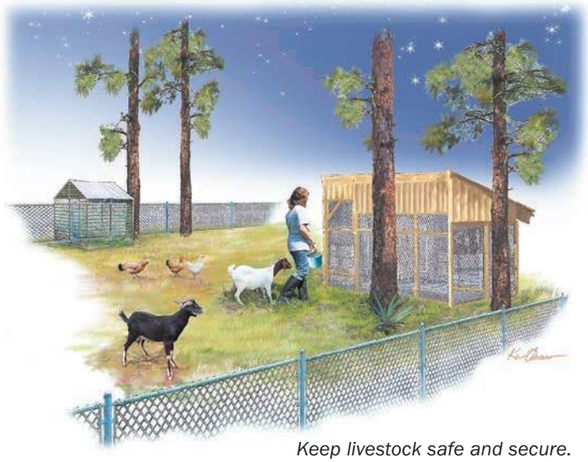
1. **Be alert from dusk 'til dawn (and whenever deer are active)**
   Florida panthers primarily are active at night. Exercise more caution at dawn, dusk or dark.

2. **Keep panther prey away**
   Deer, raccoons, rabbits, armadillos and wild hogs are prey for the Florida panther. By feeding deer or other wildlife, people inadvertently may attract panthers. Do not leave potential wildlife food outside, such as unsecured garbage or pet food. Consider fencing vegetable gardens.

3. **Keep pets secure**
   Free-roaming pets, or pets that are tethered and unfenced, are easy prey for predators, including panthers. Bring pets inside or keep them in a secure and covered kennel at night. Feeding pets outside also may attract raccoons and other panther prey; do not leave uneaten pet food available to wildlife.



Keep your pets safe and secure. Bring pets inside or keep them in a secure and covered kennel at night.



Keep livestock safe and secure.

4. **Keep domestic livestock secure**
   Where practical, place chickens, goats, hogs or other livestock in enclosed structures at night. Electric fencing can be an effective predator deterrent.

5. **Landscape for safety**
   Remove dense or low-lying vegetation that would provide hiding places for panthers and other predatory animals near your house.
   - Remove plants that deer like to eat.
   - Choose plants that do not attract deer or other panther prey species. For information on plants that deer do not like to eat, visit edis.ifas.ufl.edu/UW137.
   - Appropriate fencing will make your yard or play area uninviting to prey animals such as deer.

6. **Consider other deterrents**
   Outdoor lighting, motion sensors and electric fencing also may deter prey animals and panthers from entering your yard. Outdoor lighting also will make approaching prey and panthers more visible to you.

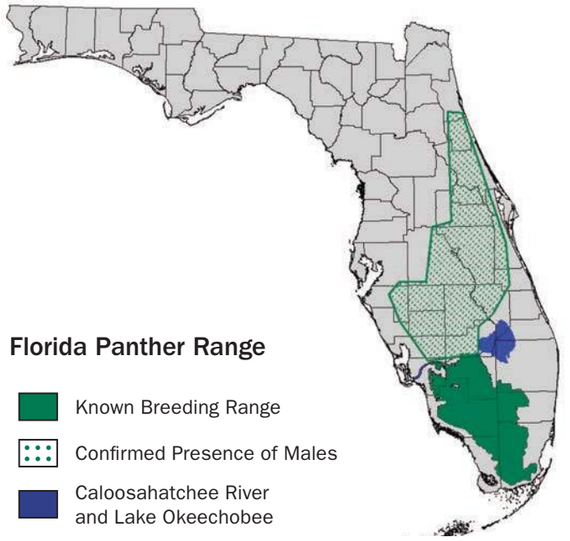
7. **Hike or bike with a friend**
   When recreating outdoors, it's a good practice to let friends or family know your whereabouts and when you expect to return. Better yet, take a friend with you!

Florida panther facts

- The Florida panther is a subspecies of puma, also known as a mountain lion or cougar. It is the last subspecies still surviving in the eastern United States.
- Biologists estimate roughly 100-160 adult and subadult Florida panthers remain in the wild. Most panthers live in southwest Florida, south of the Caloosahatchee River, although some panthers have been documented traveling as far north as central Georgia.
- The Florida panther's decline occurred prior to 1950, when it still was legal to hunt panthers. It was listed as endangered in 1967 and is protected under federal and state laws.
- Florida panther numbers declined to roughly 30 cats by the early 1980s. Severe inbreeding resulted in many health and physical problems. A genetic restoration project in 1995 was successful in improving the genetic health and vigor of the panther population.
- Florida panthers are found primarily in the Big Cypress/Everglades ecosystem in Collier, Lee, Hendry, Monroe and Miami-Dade counties.
- Florida panthers' home range sizes vary by sex and by individual. Female home ranges are typically 60-75 square miles whereas males' are typically 160-200 square miles.

FWC panther team

- There is no record of a Florida panther attacking a person. Florida panthers are rarely seen.
- The biggest threat to the future of the Florida panther is habitat loss. A number of panthers also die each year due to vehicle strikes on roadways.
- The Florida panther was chosen as the State Animal of Florida in 1982 by a vote of elementary school students throughout the state.



This brochure was produced through a partnership of the Audubon Society of Florida, Conservancy of Southwest Florida, Defenders of Wildlife, Florida Fish and Wildlife Conservation Commission, Florida Wildlife Federation, Friends of the Florida Panther Refuge, Mountain Lion Foundation, National Park Service, National Wildlife Federation, Seminole Tribe of Florida, University of Florida and the U.S. Fish and Wildlife Service.

Funding provided by the Florida Fish and Wildlife Conservation Commission, Friends of the Florida Panther Refuge and the National Fish and Wildlife Foundation.

Discouraging bears from visiting your home

Properly storing or securing residential garbage and other attractants is a proven method of discouraging bears and preventing bear conflicts around homes, farms and neighborhoods. The following items attract bears and should be protected by an electric fence, wildlife resistant container, or stored in a secure place, such as a garage or sturdy shed:

- Trash and recycling containers
- Bird and squirrel feeders
- Game feeders
- Pet foods and bowls
- Barbeque grills and smokers
- Pets and small livestock
- Livestock feed
- Compost piles
- Beehives
- Fruit and nut-bearing trees and shrubs

Funds from the "Conserve Wildlife" license plate help support efforts to reduce human-bear conflicts. Buy one today at your local tax collector's office or online at BuyAPlate.com.

Secure common bear attractants

- Use electric fencing to protect gardens, compost piles, apiaries, fruit trees and livestock.
- Store garbage and recyclables in bear-resistant containers or in a secure area until the morning of pick up.
- Feed pets indoors or bring food dishes (even if empty) inside before dark.
- Store pet and livestock feed in bear-resistant containers or inside a secure area.
- Remove bird and wildlife feeders. Ensure the area is free of all seed, corn, or other wild animal feed.
- Keep gardens and fruiting trees and shrubs tidy. Remove rotten fruit and harvest ripe nuts, fruits and vegetables.
- Clean meat smokers and barbeque grills with a degreasing detergent. Properly dispose of food remnants after each use.

Learn more about black bears with the Florida Black Bear Curriculum Guide. The guide is designed to educate teachers and students in 3rd to 8th grade and offers a comprehensive series of lessons on Florida's black bear.

To get tips on how to secure bear attractants, watch videos about bears or how to install electric fencing, and learn more about bear-resistant containers, visit MyFWC.com/Bear.

A guide to living in bear country

Florida Fish and Wildlife Conservation Commission
MyFWC.com

Ashley Hockenberry

If you live in Florida, you should know

Florida black bear populations have been recovering from historically low numbers in most areas of the state. At the same time, the human population is rapidly expanding in and around bear range. As a result, bears and humans are encountering each other more than ever.

Calls to the Florida Fish and Wildlife Conservation Commission (FWC) about human-bear encounters have increased from 1,000 in 2001 to over 4,000 in 2010. The most common calls refer to bears in yards and getting into garbage.

The mere presence of a black bear does not represent a problem. In fact, living in bear country can provide unique and rewarding experiences for residents.

While feeding bears is illegal in Florida, bears are still often fed by humans, either intentionally or unintentionally. When black bears have access to pet food, garbage, birdseed, livestock feed or other human-provided items, they quickly learn to associate people with food. Bears that have become too comfortable around people are more likely to be killed, either by vehicle collisions, illegal shooting, or as a result of bear management actions.

People ask why problem bears can't simply be relocated to a "wild area where they won't bother anyone." Unfortunately, areas large and remote enough for bears to avoid people are rare in Florida. Also, most relocated bears typically leave the new area, either to return to their original home or to leave an area already occupied by other bears. Some bears will wander through unfamiliar areas and cross busy roads, creating a danger to the bear and to motorists. In addition, bears remaining in the relocation area often exhibit the same, unwanted behavior, thus shifting the problem to a new location. As a result, relocation is not a desirable or effective solution to bear conflicts. Wildlife biologists can provide technical advice to residents who live in bear country to help them take actions to discourage bears from becoming a problem. The FWC is committed to addressing the safety concerns of residents and visitors while ensuring the long-term well-being of black bears.

If a bear comes into your yard

If you encounter a black bear at close range, remain standing upright, back up slowly and speak to the bear in a calm, assertive voice.

- Do not intentionally feed or attract bears. If a bear is eating something on your property, take note of what it is and secure it after the bear has left the area.

Charles Towne

Ashley Hockenberry

- Never approach or surprise a bear. Keep as much distance between you and the bear as possible.
- Make sure you are in a secure area and the bear has a clear escape route to leave the area - then yell, bang pots and pans, or use an air horn to scare the bear away.
- Do not turn your back, play dead or run from a black bear. Back away slowly into a house, car or building.
- Report any bear threatening the safety of humans, pets or livestock, or causing property damage to the FWC (see back panel).
- Warning! It is illegal to injure or kill black bears under Florida state law. If you are found guilty, you could face fines and/or jail time.

Climbing trees is a bear's natural escape route. If the bear climbs a tree, keep people and pets away. The bear will come down the tree and leave when it feels safe, usually after dark.

Did you know?

Black bears are shy animals and generally not aggressive towards people. When a bear stands on its hind legs, it is merely trying to get a better view, rather than acting in a threatening way. Black bears may huff, snap their jaws, swat the ground or "bluff charge" when cornered, threatened or caught stealing food. Stand your ground and then slowly back away. Always respect bears – they are large and powerful wild animals and can act unpredictably. Bears used to getting food from humans may lose their natural fear of people and are more likely to damage property or become a safety threat.

The bear facts

Black bears are the only species of bear in Florida and once roamed the entire state.

- FWC biologists estimate there are 2,500-3,000 black bears in Florida.
- Florida bears are generally black with a brown muzzle and may have a white chest marking called a blaze.
- Adult black bears typically weigh between 150 to 400 pounds; males are usually larger than females.
- Female bears have their first litter at about $3^1/_2$ years of age and generally have one to three cubs every other year.
- In Florida, the breeding season runs from June to August and cubs are born in late January or early February.
- Bears of all ages are excellent climbers and will climb trees when they are frightened or looking for food (e.g., acorns).
- About 80 percent of a black bear's diet comes from plants (e.g., fruits, nuts, berries), 15 percent from insects (e.g., termites, ants, yellow jackets) and 5 percent from meat (e.g., opossums, armadillos, carrion).

It is illegal to intentionally place food or garbage out that attracts bears and causes conflicts. Anything that attracts dogs, cats or raccoons also will attract bears!

- Never feed alligators – it's dangerous and illegal. When fed, alligators can overcome their natural wariness and learn to associate people with food. When this happens, some of these alligators have to be removed and killed.

- Dispose of fish scraps in garbage cans at boat ramps and fish camps. Do not throw them into the water. Although you are not intentionally feeding alligators when you do this, the result can be the same.

- Seek immediate medical attention if you are bitten by an alligator. Alligator bites can result in serious infections.

- Observe and photograph alligators only from a distance. Remember, they're an important part of Florida's natural history as well as an integral component of aquatic ecosystems.

Lizabeth West, FWC

Do not swim outside of posted swimming areas or in waters that may be inhabited by alligators.

Living with Alligators

In Florida, the growing number of people living and recreating near water has led to a steady rise in the number of alligator-related complaints. The majority of these complaints relate to alligators being where they simply aren't wanted. Because of these complaints, the Florida Fish and Wildlife Conservation Commission's Statewide Nuisance Alligator Program permits the killing of approximately 7,000 nuisance alligators each year. Using this approach, and through increased public awareness, the rate of alligator bites on people has remained constant despite the increased potential for alligator-human interactions as Florida's human population has grown.

Alligators are an important part of Florida's landscape and play a valuable role in the ecology of our state's wetlands. Alligators are predators and help keep other aquatic animal populations in balance. A better understanding of the facts and information presented in this brochure will help ensure that people and alligators can continue to coexist.

Visit MyFWC.com/Gators for more information about alligators and the latest nuisance alligator program statistics.

Tim Donovan, FWC

Alligators and People

Alligators are a fundamental part of Florida's wetlands, swamps, rivers and lakes, and they are found in all 67 counties. Florida continues to experience human population growth. Many new residents seek waterfront homes, resulting in increased interactions between people and alligators.

Although most Floridians understand that we have alligators living in our state, the potential for conflict exists. Because of their predatory nature, alligators may target pets and livestock as prey. Unfortunately, people also are occasionally bitten. Since 1948, Florida has averaged about five unprovoked bites per year. During that period, a little more than 300 unprovoked bites to people have been documented in Florida, with 22 resulting in deaths.

In the past 10 years, the Florida Fish and Wildlife Conservation Commission has received an average of nearly 16,000 alligator-related complaints per year. Most of these complaints deal with alligators occurring in places such as backyard ponds, canals, ditches and streams, but other conflicts occur when alligators wander into garages, swimming pools and golf course ponds. Sometimes, alligators come out of the water to bask in the sun or move between wetlands. In many cases, if left alone, these alligators will eventually move on to areas away from people.

Safety Tips

- Generally, alligators less than four feet in length are not large enough to be dangerous unless handled. However, if you encounter any alligator that you believe poses a threat to people, pets or property, call the Nuisance Alligator Hotline at 866-FWC-GATOR (866-392-4286). Please be aware, nuisance alligators are killed, not relocated.

- Be aware of the possibility of alligators when you are in or near fresh or brackish water. Bites may occur when people do not pay close enough attention to their surroundings when working or recreating near water.

- Do not swim outside of posted swimming areas or in waters that might be inhabited by large alligators.

- Alligators are most active between dusk and dawn. Therefore, avoid swimming at night.

- Dogs and cats are similar in size to the natural prey of alligators. Don't allow pets to swim, exercise or drink in or near waters that may contain alligators. Dogs often attract an alligator's interest, so do not swim with your dog.

- Leave alligators alone. State law prohibits killing, harassing or possessing alligators. Handling even small alligators can result in injury.

Tim Donovan, FWC

A young alligator wanders onto a porch in a residential neighborhood.

Preserve Area

Please Do Not Disturb

This Area is Managed for Native Plants and Wildlife

20351 Corkscrew Road

Section 21, Township 46 South, Range 27 East
Lee County, Florida

Protected Species Management Plan

August 2025

Prepared by:

Atwell
4470 Camino Real Way, Suite 101
Fort Myers, FL 33966
(239) 334-3680

INTRODUCTION

The 77.94± acre project is located within a portion of Sections 21 Township 46 South, Range 27 East, Lee County, Florida. The parcel is bordered to the north by active farm fields, to the east by privately owned undeveloped land, to the west by undeveloped county land, and to the south by Corkscrew Road (Appendix A).

The majority of this site consists of improved pasture. Exotic invaded uplands and wetlands are also present. Most of the onsite habitats have been physically and hydrologically disturbed by past agricultural activities.

CONSERVATION AREAS

The project has been designed to minimize impacts to listed species and their habitat. The proposed project has been designed to avoid impacts to all existing onsite wetlands. The vast majority of the proposed development is located within existing agricultural lands.

The proposed conservation areas total 42.75 acres. The conservation areas will be maintained in accordance with the Indigenous Habitat Management Plan. The conservation areas will be managed to provide enhanced suitable habitat for listed species.

The proposed project will retain 100% of the on-site wetlands (23.55 ac.). This includes 12.80 acres of existing indigenous wetlands and 10.75 acres of non-indigenous wetlands. Additional conservation lands totaling 11.10 acres will be created on-site and will consist of wetland creation (FLUCCS 600).

Areas containing less than 75 percent coverage of exotic vegetation will be preserved and enhanced through the removal of exotic vegetation. Restoration of indigenous wetlands through the removal of exotic vegetation and supplemental planting is proposed in areas within existing forested habitats containing greater than 75 percent exotics. Creation of indigenous preserve from existing agricultural lands is also proposed.

The conservation areas will be managed for listed species based on habitat type and current listed species utilization. A Conservation Easement will be recorded and placed over the preserved enhanced and restored uplands and wetlands. Signs demarcating the preservation areas will be posted at 200 feet intervals along the outer edge of all preservation areas.

PROTECTED SPECIES SURVEY

Atwell conducted a survey for species listed by the Florida Fish and Wildlife Conservation Commission (FWC) and the United States Fish and Wildlife Service (FWS) on the project

site in April 2024. Protected species identified on the property during the survey include American alligator. No additional species were observed during the survey.

Protected Species Management Plan

All areas of existing onsite native habitat are being preserved and enhanced. Enhancement of these areas will provide greater potential habitat value for a variety of listed and non-listed wildlife. Adverse impacts to wildlife including listed wildlife are not anticipated as a result of the proposed project.

American Alligator

Potential habitat for American alligators on-site consists of the open water areas and wetlands within the proposed preserve areas. No alligator nests were found on the property during the protected species survey. The proposed site plan preserves all on-site wetlands. In addition, the development includes multiple stormwater management lakes. These preserved wetlands and open water areas will continue to provide on-site habitat for the American alligator.

Alligators will commonly move from water body to water body in response to factors such as season, disturbances, food supply, etc. In the event that an alligator is present within the limits of construction at the time of site clearing, work within the immediate vicinity of the alligator will be halted and the animal will be allowed to move out of harm's way. Once the American alligator has moved work can be restarted.

Signs will be posted on the subject property to instruct on-site workers, residents, and guests not to feed or harass the American alligator. The signs will indicate that the offense is punishable by law. The Florida Fish and Wildlife Conservation Commission (FWC) educational brochure entitled "A Guide to Living with Alligators" (Appendix B) will be provided to homeowners, guests, and maintenance staff.

Audubon's Crested Caracara

No evidence of nesting of this species was found on-site. Areas within the development footprint currently provide limited potential nesting habitat. Prior to clearing, appropriate habitats will be surveyed for the presence of crested caracara nests. If found, any potential nests will be monitored during the nesting season (January – April) to determine if they are being utilized by crested caracara. If a nest is located, all appropriate government agencies (FWC, FWS, and Lee County Environmental Sciences) will be informed of the location of the nest.

During the 2020-2021 nesting season, an active Crested Caracara nest was located ±640 feet west of the project within the Corkscrew Regional Mitigation Bank. In addition, the Caracara Prairie Preserve is located ± 3.4 miles east along the Lee and Collier County line.

Wading Birds

No wading birds or nesting activity was observed onsite during the protected species survey.

Prior to clearing, appropriate habitats will be surveyed for the presence of nesting wading birds. If active wading bird nests are found within the development footprint, the applicant will coordinate with the FWC to obtain applicable permits, as necessary.

Existing wading bird foraging habitat will be enhanced through removal of exotic vegetation. The proposed site conditions will result in a total of 34.65 acres of preserved and enhanced wetlands. The proposed site plan also includes stormwater management lakes and lake littoral shelves. The enhancement of the on-site wetlands as well as the proposed stormwater management areas and lakes will provide habitat for both listed and non-listed wading birds.

Florida Bonneted Bat

The proposed project will result in the restoration and enhancement of 42.75 acres of Florida Bonneted Bat roosting and foraging habitat. In addition, the onsite stormwater management lakes will provide open freshwater foraging opportunities.

Prior to clearing, appropriate habitats will be surveyed for the presence of cavity trees. The trees containing potential Florida bonneted bat roost cavities will be visually inspected (peeped) using a small high resolution wide angle video camera capable of operating in low light conditions mounted on an extendable pole. All videos will be carefully examined for evidence of Florida bonneted bats or their guano. In the event that evidence of Florida bonneted bat utilization of a roost cavity is detected, the landowner will coordinate with the United States Fish and Wildlife Service (FWS) on appropriate additional surveys and conservation measures that are required to prevent a “take” of this species. Lee County Environmental Sciences will be provided with a copy of the cavity tree survey and FWS’s recommendations (if any) on required future conservation measures for the Florida bonneted bat.

Big Cypress Fox Squirrel

Potential habitat for the Big Cypress fox squirrel occurs in the forested portions of the property. However, no fox squirrel nests were observed within the project boundaries. Prior to clearing the site, a survey of the construction limits for the presence of Big Cypress fox squirrels or their nests. Any potential nests will be monitored to determine if they are currently being utilized by Big Cypress fox squirrels. Nests found to be utilized by a Big Cypress fox squirrel will be temporarily protected from clearing by a 125 foot radius undisturbed buffer. These nests will be taken outside of the February 1st to May 30th nesting season once the absence of young fox squirrels within the nests is confirmed. The required authorization from the FWC will be obtained prior to removing the nest tree.

Forested habitat suitable for this species will be preserved and restored via treatment of invasive exotic plant species and planting with native species where appropriate. The protection provided by implementation of the Indigenous Habitat Management Plan will

provide long-term viability for the Big Cypress fox squirrel and would assure that any impacts to this species are offset.

Eastern Indigo Snake

Protection guidelines will be implemented for the Eastern indigo snake during clearing activities for the project. Educational material and guidelines for construction personnel will be provided in the event they encounter an Eastern indigo snake.

The FWS' Standard Protection Measures for the Eastern Indigo Snake (2013) will be followed prior to and during construction activities. The Standard Protection Measures include the placement of posters at strategic locations on the construction site and along proposed access roads clearly visible to construction staff. The posters include a description and photograph of the Eastern indigo snake, its protection status, and instructions in the event that one is observed. In addition, informational brochures will be provided to all construction staff.

The Project will preserve, enhance, and restore existing vegetation on-site through the removal of exotic vegetation and the restoration of existing agricultural lands to native habitats. The preserve areas will be maintained per the Indigenous Habitat Management Plan and will provide habitat for the Eastern indigo snake.

The FWS Standard Protection Measures for the Eastern Indigo Snake (2013) will be followed prior to and during construction activities. A copy of the brochure found in Appendix C will be provided to all on-site construction workers.

Florida Black Bear

Florida black bear are known to occur in the vicinity of the proposed project. The preserved, enhanced, and restored habitat within the conservation area will provide habitat for the Florida black bear. Enhancement activities will provide a higher quality habitat than what currently exists onsite.

Residents will be educated about the presence of black bears in their community. The FWC educational brochure entitled "A Guide to Living in Bear Country" (Appendix D) will be provided to homeowners and maintenance staff.

Garbage and recyclables will be stored in bear-resistant containers with appropriate locking mechanisms, and bear-resistant dumpsters will be used in areas where communal garbage is collected. Bear resistant receptacles will be required for each residential unit. Lee County Ordinance No. 11-27 requires individual trash receptacles for residential units of 40 gallons or less in size. In consultation with the local waste disposal company, bear-resistant dumpsters will be purchased from one of the listed companies or another company that is able to provide bear- resistant dumpsters which are compatible with local equipment. They will be incorporated at the time Lee County's waste collection sub-contractor makes them available for use. Units that have curbside garbage service will be required to place garbage containers curbside no earlier than the morning of the days of garbage pickup, and garbage containers will be returned to their permitted location no later than the

evening of the days of garbage pickup. For units with curbside garbage service, all garbage, trash refuse, or rubbish will be required to be placed in appropriate garbage containers and stored inside an enclosed area except for the days when there is curbside garbage pickup service. For units without curbside garbage service, all garbage, trash refuse, or rubbish will be placed in bear-resistant dumpsters with the lid closed and secured.

Florida Panther

The property is located within both the FWS Primary and Secondary Zones for the Florida panther. Historic telemetry data shows panthers were recorded near or onsite on several different occasions between 2012 and 2016. The following habitat management plan has been prepared for the purpose of addressing the conservation of Florida panther habitat on the Project site. The Florida panther is listed as endangered by the FWC and the FWS.

The preserved, enhanced, and restored habitat within the conservation area will provide habitat for the Florida panther and their prey. Enhancement activities will provide a higher quality habitat than what currently exists onsite. To avoid encounters between humans and the Florida panther, the educational brochure “A Guide to Living with Florida Panthers” (Appendix E) will be provided to all residents, guests, and staff.

- Leave alligators alone. State law prohibits killing, harassing or possessing alligators. Handling even small alligators can result in injury.

Tim Donovan, FWC

A young alligator wanders onto a porch in a residential neighborhood.

APPENDIX C

The Eastern Indigo Snake

Killing, harming, or harassing indigo snakes is strictly prohibited and punishable under State and Federal Law.

Only individuals currently authorized through an issued Incidental Take Statement in association with a USFWS Biological Opinion, or by a Section 10(a)(1)(A) permit issued by the USFWS, to handle an eastern indigo snake are allowed to do so.

LEGAL STATUS: The eastern indigo snake is classified as a Threatened species by both the USFWS and the Florida Fish and Wildlife Conservation Commission. "Taking" of eastern indigo snakes is prohibited by the Endangered Species Act without a permit. "Take" is defined by the USFWS as an attempt to kill, harm, harass, pursue, hunt, shoot, wound, trap, capture, collect, or engage in any such conduct. Penalties include a maximum fine of $25,000 for civil violations and up to $50,000 and/or imprisonment for criminal offenses, if convicted.

August 12, 2013

ATTENTION:

THREATENED EASTERN INDIGO SNAKES MAY BE PRESENT ON THIS SITE!!!

Please read the following information provided by the U.S. Fish and Wildlife Service to become familiar with standard protection measures for the eastern indigo snake.

IF YOU SEE A LIVE EASTERN INDIGO SNAKE ON THE SITE:

- Cease clearing activities and allow the eastern indigo snake sufficient time to move away from the site without interference.
- Personnel must NOT attempt to touch or handle snake due to protected status.
- Take photographs of the snake, if possible, for identification and documentation purposes.
- Immediately notify supervisor or the applicant's designated agent, **and** the appropriate U.S. Fish and Wildlife Service (USFWS) office, with the location information and condition of the snake.
- If the snake is located in a vicinity where continuation of the clearing or construction activities will cause harm to the snake, the activities must halt until such time that a representative of the USFWS returns the call (within one day) with further guidance as to when activities may resume.

IF YOU SEE A DEAD EASTERN INDIGO SNAKE ON THE SITE:

- Cease clearing activities and immediately notify supervisor or the applicant's designated agent, **and** the appropriate USFWS office, with the location information and condition of the snake.
- Take photographs of the snake, if possible, for identification and documentation purposes.
- Thoroughly soak the dead snake in water and then freeze the specimen. The appropriate wildlife agency will retrieve the dead snake.

USFWS Florida Field Offices to be contacted if a live or dead eastern indigo snake is encountered:

North Florida ES Office – (904) 731-3336
Panama City ES Office – (850) 769-0552
South Florida ES Office – (772) 562-3909

DESCRIPTION: The eastern indigo snake is one of the largest non-venomous snakes in North America, with individuals often reaching up to 8 feet in length. They derive their name from the glossy, blue-black color of their scales above and uniformly slate blue below. Frequently, they have orange to coral reddish coloration in the throat area, yet some specimens have been reported to only have cream coloration on the throat. These snakes are not typically aggressive and will attempt to crawl away when disturbed. Though indigo snakes rarely bite, they should NOT be handled.

SIMILAR SNAKES: The black racer is the only other solid black snake resembling the eastern indigo snake. However, black racers have a white or cream chin, thinner bodies, and WILL BITE if handled.

LIFE HISTORY: The eastern indigo snake occurs in a wide variety of terrestrial habitat types throughout Florida. Although they have a preference for uplands, they also utilize some wetlands and agricultural areas. Eastern indigo snakes will often seek shelter inside gopher tortoise burrows and other below- and above-ground refugia, such as other animal burrows, stumps, roots, and debris piles. Females may lay from 4 - 12 white eggs as early as April through June, with young hatching in late July through October.

Discouraging bears from visiting your home

Properly storing or securing residential garbage and other attractants is a proven method of discouraging bears and preventing bear conflicts around homes, farms and neighborhoods. The following items attract bears and should be protected by an electric fence, wildlife resistant container, or stored in a secure place, such as a garage or sturdy shed:

- Trash and recycling containers
- Bird and squirrel feeders
- Game feeders
- Pet foods and bowls
- Barbeque grills and smokers
- Pets and small livestock
- Livestock feed
- Compost piles
- Beehives
- Fruit and nut-bearing trees and shrubs

Funds from the "Conserve Wildlife" license plate help support efforts to reduce human-bear conflicts. Buy one today at your local tax collector's office or online at BuyAPlate.com.

Secure common bear attractants

- Use electric fencing to protect gardens, compost piles, apiaries, fruit trees and livestock.
- Store garbage and recyclables in bear-resistant containers or in a secure area until the morning of pick up.
- Feed pets indoors or bring food dishes (even if empty) inside before dark.
- Store pet and livestock feed in bear-resistant containers or inside a secure area.
- Remove bird and wildlife feeders. Ensure the area is free of all seed, corn, or other wild animal feed.
- Keep gardens and fruiting trees and shrubs tidy. Remove rotten fruit and harvest ripe nuts, fruits and vegetables.
- Clean meat smokers and barbeque grills with a degreasing detergent. Properly dispose of food remnants after each use.

Learn more about black bears with the Florida Black Bear Curriculum Guide. The guide is designed to educate teachers and students in 3rd to 8th grade and offers a comprehensive series of lessons on Florida's black bear.

To get tips on how to secure bear attractants, watch videos about bears or how to install electric fencing, and learn more about bear-resistant containers, visit MyFWC.com/Bear.

If you live in Florida, you should know

Florida black bear populations have been recovering from historically low numbers in most areas of the state. At the same time, the human population is rapidly expanding in and around bear range. As a result, bears and humans are encountering each other more than ever.

Calls to the Florida Fish and Wildlife Conservation Commission (FWC) about human-bear encounters have increased from 1,000 in 2001 to over 4,000 in 2010. The most common calls refer to bears in yards and getting into garbage.

The mere presence of a black bear does not represent a problem. In fact, living in bear country can provide unique and rewarding experiences for residents.

While feeding bears is illegal in Florida, bears are still often fed by humans, either intentionally or unintentionally. When black bears have access to pet food, garbage, birdseed, livestock feed or other human-provided items, they quickly learn to associate people with food. Bears that have become too comfortable around people are more likely to be killed, either by vehicle collisions, illegal shooting, or as a result of bear management actions.

People ask why problem bears can't simply be relocated to a "wild area where they won't bother anyone." Unfortunately, areas large and remote enough for bears to avoid people are rare in Florida. Also, most relocated bears typically leave the new area, either to return to their original home or to leave an area already occupied by other bears. Some bears will wander through unfamiliar areas and cross busy roads, creating a danger to the bear and to motorists. In addition, bears remaining in the relocation area often exhibit the same, unwanted behavior, thus shifting the problem to a new location. As a result, relocation is not a desirable or effective solution to bear conflicts. Wildlife biologists can provide technical advice to residents who live in bear country to help them take actions to discourage bears from becoming a problem. The FWC is committed to addressing the safety concerns of residents and visitors while ensuring the long-term well-being of black bears.

If a bear comes into your yard

If you encounter a black bear at close range, remain standing upright, back up slowly and speak to the bear in a calm, assertive voice.

- Do not intentionally feed or attract bears. If a bear is eating something on your property, take note of what it is and secure it after the bear has left the area.

Charles Towne

Ashley Hockenberry

- Never approach or surprise a bear. Keep as much distance between you and the bear as possible.
- Make sure you are in a secure area and the bear has a clear escape route to leave the area - then yell, bang pots and pans, or use an air horn to scare the bear away.
- Do not turn your back, play dead or run from a black bear. Back away slowly into a house, car or building.
- Report any bear threatening the safety of humans, pets or livestock, or causing property damage to the FWC (see back panel).
- Warning! It is illegal to injure or kill black bears under Florida state law. If you are found guilty, you could face fines and/or jail time.

Climbing trees is a bear's natural escape route. If the bear climbs a tree, keep people and pets away. The bear will come down the tree and leave when it feels safe, usually after dark.

Did you know?

Black bears are shy animals and generally not aggressive towards people. When a bear stands on its hind legs, it is merely trying to get a better view, rather than acting in a threatening way. Black bears may huff, snap their jaws, swat the ground or "bluff charge" when cornered, threatened or caught stealing food. Stand your ground and then slowly back away. Always respect bears – they are large and powerful wild animals and can act unpredictably. Bears used to getting food from humans may lose their natural fear of people and are more likely to damage property or become a safety threat.

The bear facts

Black bears are the only species of bear in Florida and once roamed the entire state.

- FWC biologists estimate there are 2,500-3,000 black bears in Florida.
- Florida bears are generally black with a brown muzzle and may have a white chest marking called a blaze.
- Adult black bears typically weigh between 150 to 400 pounds; males are usually larger than females.
- Female bears have their first litter at about $3^1/_2$ years of age and generally have one to three cubs every other year.
- In Florida, the breeding season runs from June to August and cubs are born in late January or early February.
- Bears of all ages are excellent climbers and will climb trees when they are frightened or looking for food (e.g., acorns).
- About 80 percent of a black bear's diet comes from plants (e.g., fruits, nuts, berries), 15 percent from insects (e.g., termites, ants, yellow jackets) and 5 percent from meat (e.g., opossums, armadillos, carrion).

It is illegal to intentionally place food or garbage out that attracts bears and causes conflicts. Anything that attracts dogs, cats or raccoons also will attract bears!

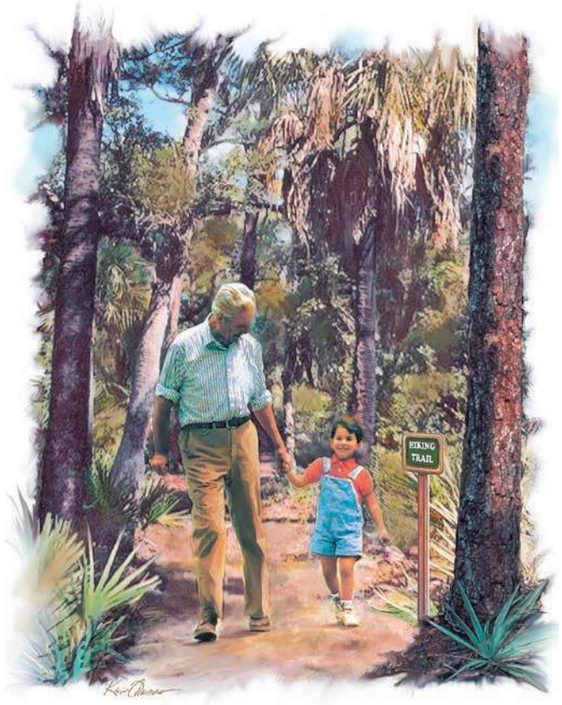
APPENDIX E

A Guide to Living with Florida Panthers

You live in Florida panther country

Florida panthers are reclusive and rarely seen by people. They normally live in remote, undeveloped areas. However, as the number of people in southern Florida grows, there is an increased chance of an encounter with a Florida panther.

This brochure contains some guidelines to help you live safely in Florida panther country.



Keep children within sight and close to you, especially outdoors between dusk and dawn.

If you feel threatened by a panther, or have lost pets or livestock to a panther, please call the Florida Fish and Wildlife Conservation Commission's Wildlife Alert Hotline at 1-888-404-FWCC (3922).

If you see a Florida panther

The Florida panther moves primarily at night. The chances of seeing a panther are slim. But if you live in Florida panther country, you need to know what to do if you see one.

- **Keep children within sight and close to you.** Pick up any small children so they don't panic and run. Try to do this without bending over or turning away from the Florida panther.
- **Give them space.** Florida panthers typically will avoid a confrontation. Give them a way to escape.
- **Do not run.** Running may stimulate a panther's instinct to chase. Stand and face the animal. Make eye contact to let the panther know you are aware of its presence.
- **Avoid crouching or bending over.** Squatting or bending makes you look smaller, resembling a prey-sized animal.
- **Appear larger.** Make gestures that indicate you are not prey and that you may be a danger to the panther. Raise your arms. Open your jacket. Throw stones, branches or whatever you can reach without crouching or turning your back. Wave your arms slowly and speak firmly in a loud voice.
- **Fight back if attacked.** There has never been a reported panther attack in Florida. In western states, where attacks by cougars have occurred very rarely, potential victims have fought back successfully with rocks, sticks, caps, jackets, garden tools and their bare hands. Since large cats usually try to bite the head or neck, try to remain standing and face the animal.

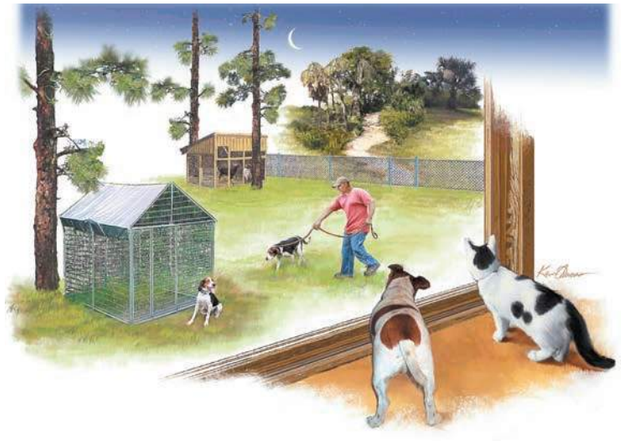
7 ways to live safely in Florida panther country

While these guidelines are meant to help you live safely in Florida panther habitat, they also apply to living with more commonly encountered wildlife, including raccoons, snakes, bears and alligators.

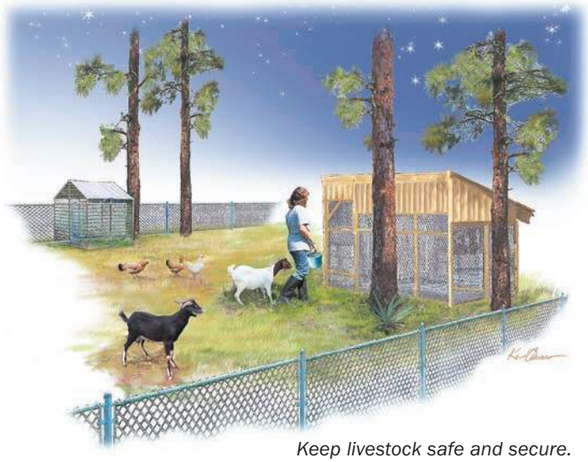
1. **Be alert from dusk 'til dawn (and whenever deer are active)**
   Florida panthers primarily are active at night. Exercise more caution at dawn, dusk or dark.

2. **Keep panther prey away**
   Deer, raccoons, rabbits, armadillos and wild hogs are prey for the Florida panther. By feeding deer or other wildlife, people inadvertently may attract panthers. Do not leave potential wildlife food outside, such as unsecured garbage or pet food. Consider fencing vegetable gardens.

3. **Keep pets secure**
   Free-roaming pets, or pets that are tethered and unfenced, are easy prey for predators, including panthers. Bring pets inside or keep them in a secure and covered kennel at night. Feeding pets outside also may attract raccoons and other panther prey; do not leave uneaten pet food available to wildlife.



Keep your pets safe and secure. Bring pets inside or keep them in a secure and covered kennel at night.



Keep livestock safe and secure.

4. **Keep domestic livestock secure**
   Where practical, place chickens, goats, hogs or other livestock in enclosed structures at night. Electric fencing can be an effective predator deterrent.

5. **Landscape for safety**
   Remove dense or low-lying vegetation that would provide hiding places for panthers and other predatory animals near your house.
   - Remove plants that deer like to eat.
   - Choose plants that do not attract deer or other panther prey species. For information on plants that deer do not like to eat, visit edis.ifas.ufl.edu/UW137.
   - Appropriate fencing will make your yard or play area uninviting to prey animals such as deer.

6. **Consider other deterrents**
   Outdoor lighting, motion sensors and electric fencing also may deter prey animals and panthers from entering your yard. Outdoor lighting also will make approaching prey and panthers more visible to you.

7. **Hike or bike with a friend**
   When recreating outdoors, it's a good practice to let friends or family know your whereabouts and when you expect to return. Better yet, take a friend with you!

Florida panther facts

- The Florida panther is a subspecies of puma, also known as a mountain lion or cougar. It is the last subspecies still surviving in the eastern United States.
- Biologists estimate roughly 100-160 adult and subadult Florida panthers remain in the wild. Most panthers live in southwest Florida, south of the Caloosahatchee River, although some panthers have been documented traveling as far north as central Georgia.
- The Florida panther's decline occurred prior to 1950, when it still was legal to hunt panthers. It was listed as endangered in 1967 and is protected under federal and state laws.
- Florida panther numbers declined to roughly 30 cats by the early 1980s. Severe inbreeding resulted in many health and physical problems. A genetic restoration project in 1995 was successful in improving the genetic health and vigor of the panther population.
- Florida panthers are found primarily in the Big Cypress/Everglades ecosystem in Collier, Lee, Hendry, Monroe and Miami-Dade counties.
- Florida panthers' home range sizes vary by sex and by individual. Female home ranges are typically 60-75 square miles whereas males' are typically 160-200 square miles.

FWC panther team

- There is no record of a Florida panther attacking a person. Florida panthers are rarely seen.
- The biggest threat to the future of the Florida panther is habitat loss. A number of panthers also die each year due to vehicle strikes on roadways.
- The Florida panther was chosen as the State Animal of Florida in 1982 by a vote of elementary school students throughout the state.
