

Building Permit Fee Schedule

Committee Review

New fee schedule effective April 15, 2026

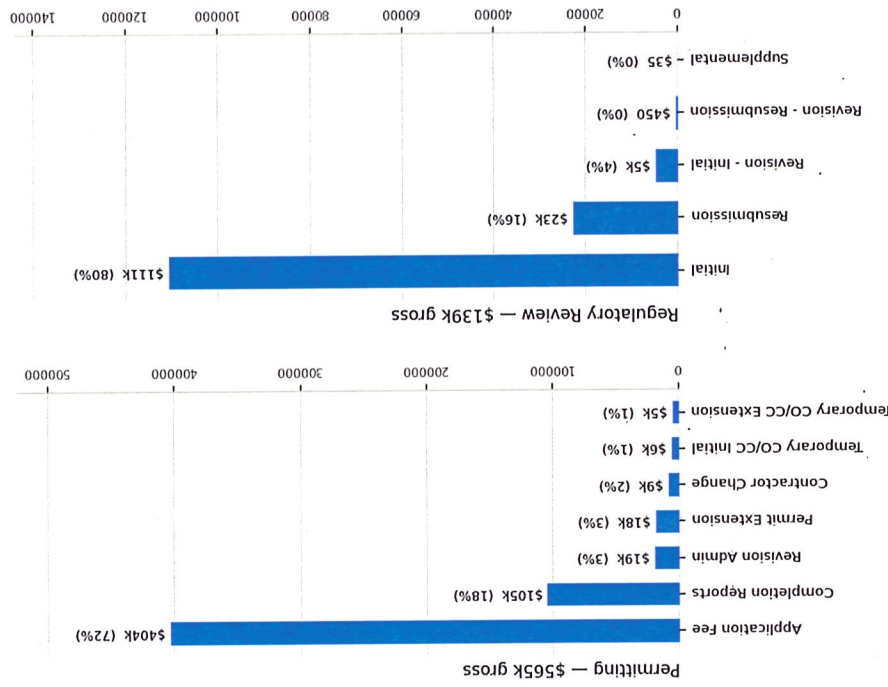

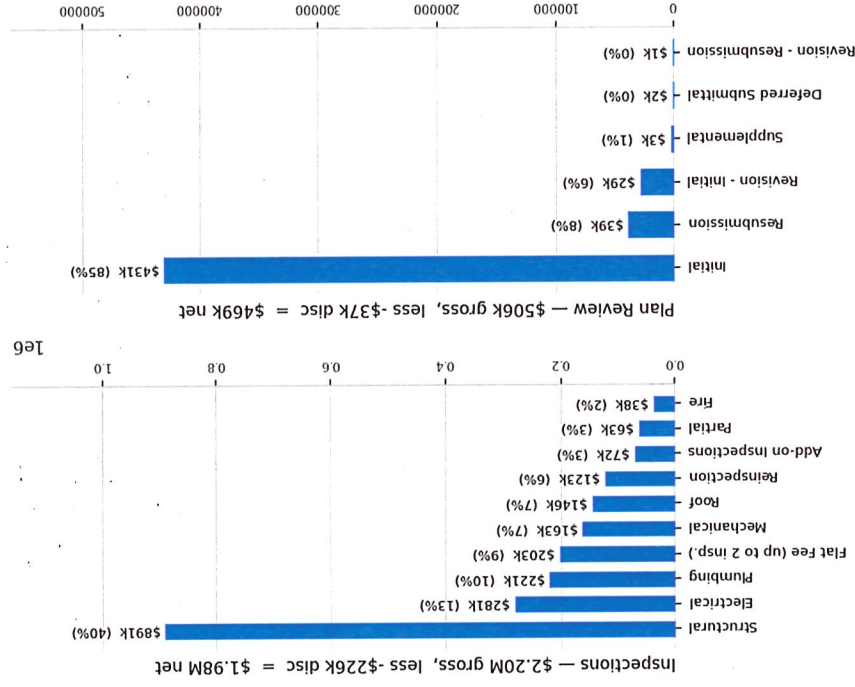

The following compares permit fees before and after the new schedule, using the same May–June window in 2025 and 2026 so the two periods are directly comparable.

Figures cover mapped permitting fees; administrative, radon, and miscellaneous fees are excluded.

What Drives Each Section's Revenue

Within each revenue section, the fee groups that make up the total.
 Consideration: Technology and Flood fees are left out here — they are near pass-through and add little to this view.

Fee Distribution Within Each Revenue Section (by fee group; Technology & Flood omitted; discounts netted in title, May 1 cohort)

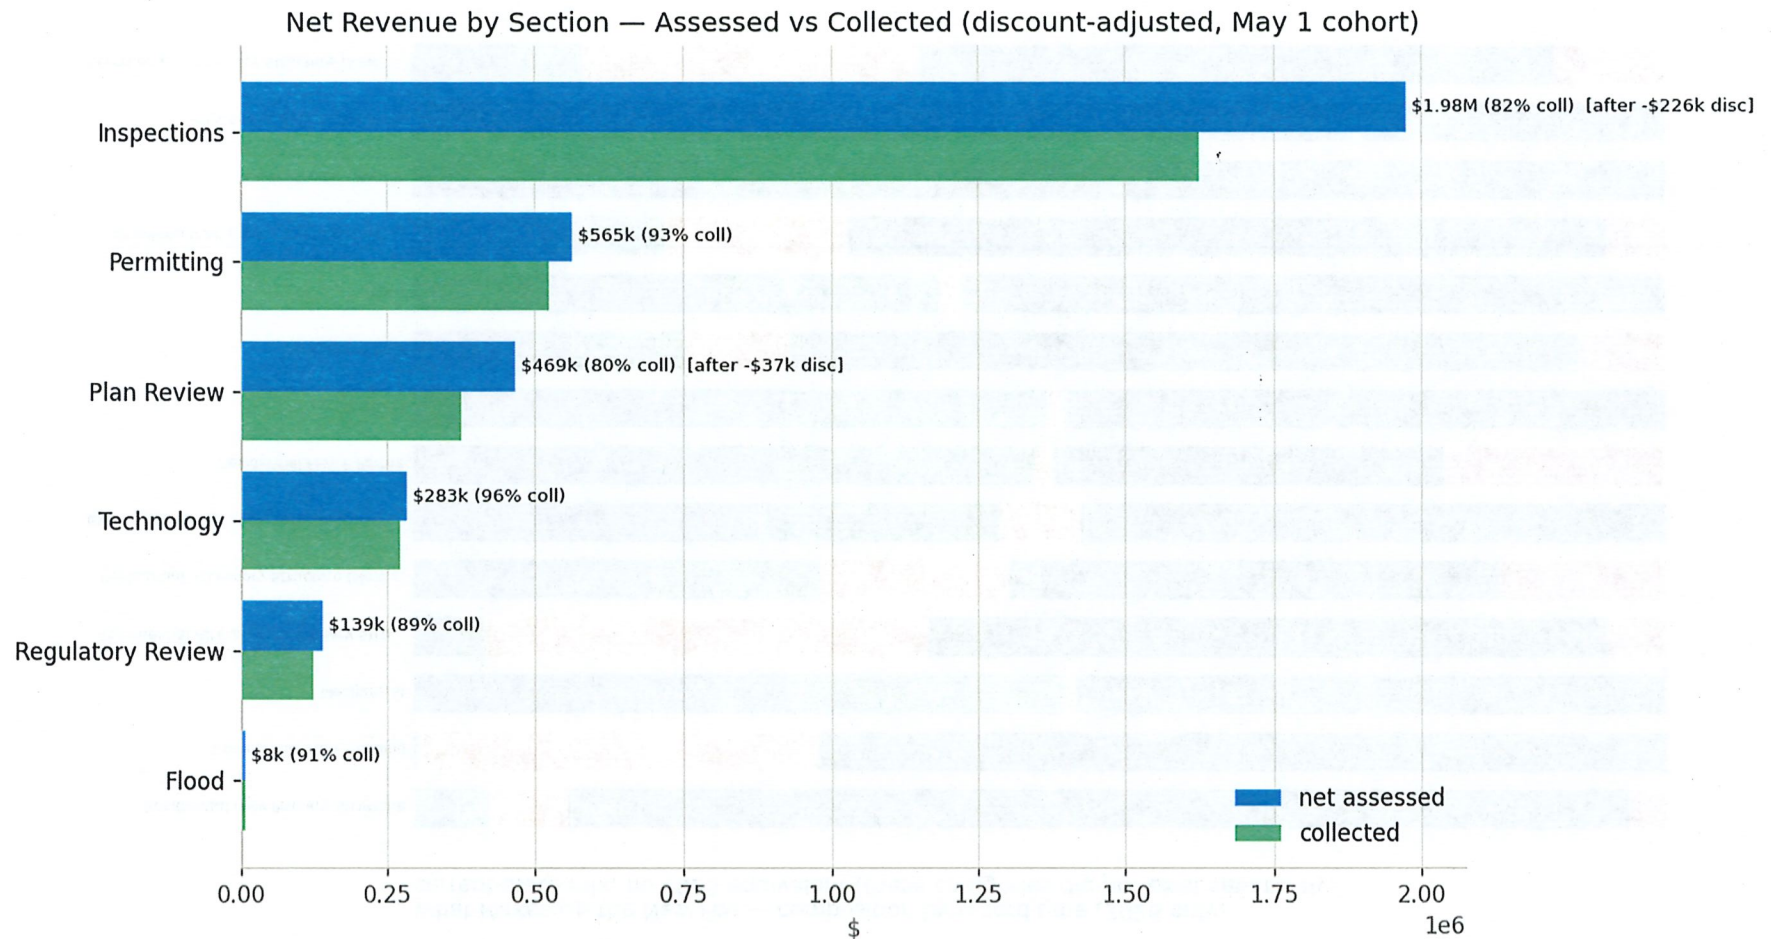

1e6

Revenue by Section — Assessed vs Collected

Net revenue after discounts, alongside how much has been collected to date.

Consideration: uncollected amounts are largely permits still moving through the process, not lost revenue.

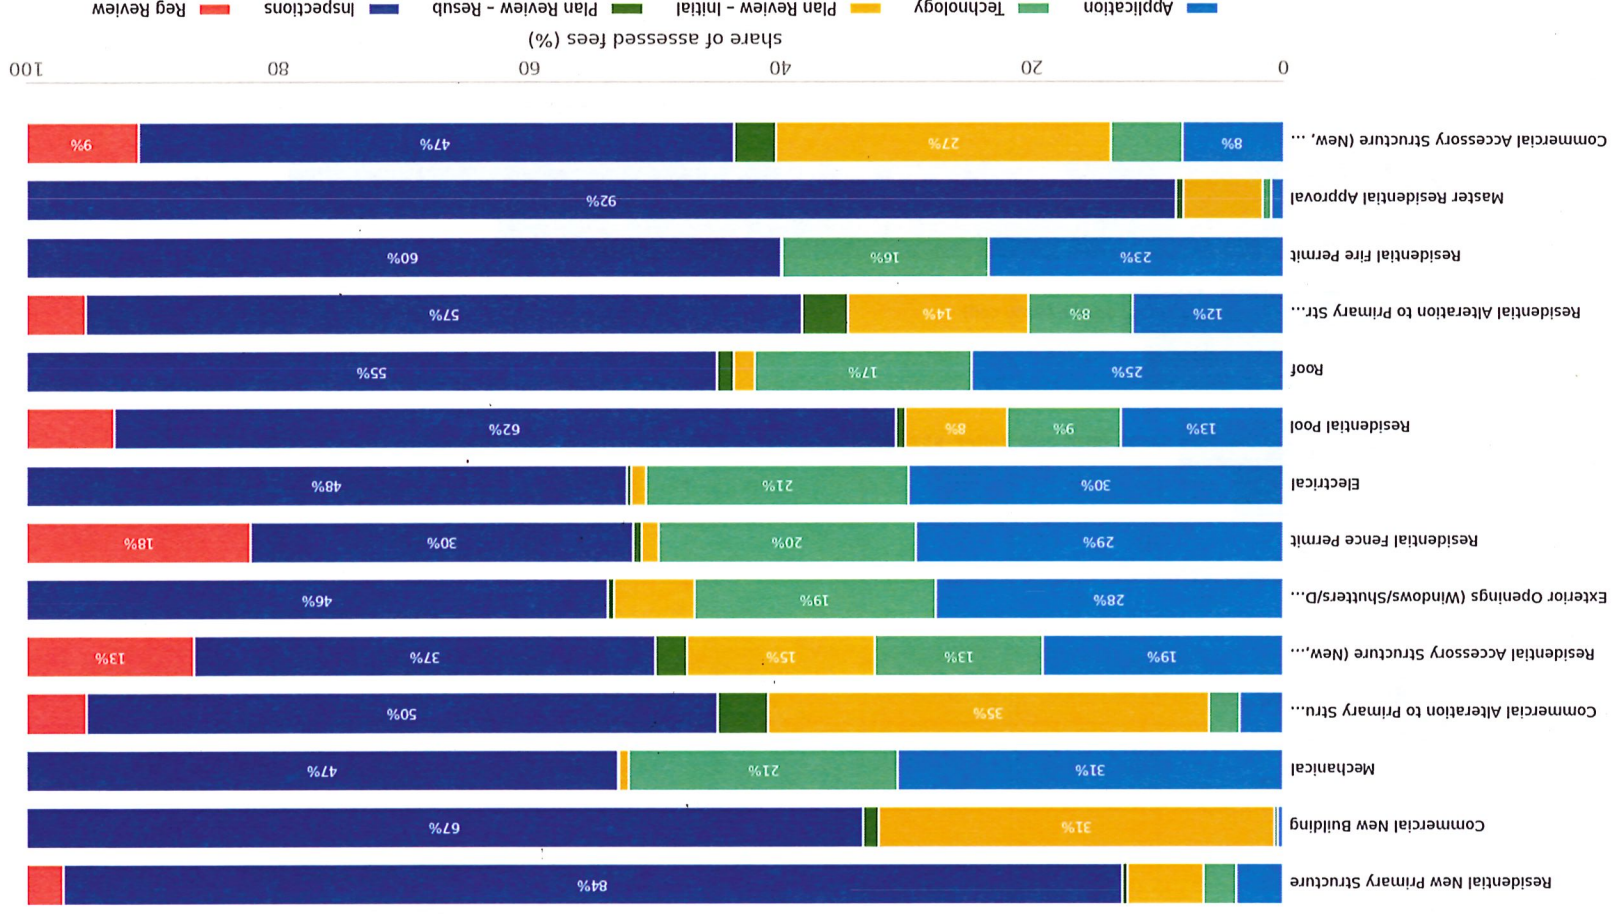

What Makes Up the New Fee

The mix of fee types on a 2026 permit, by permit type.

Consideration: these categories did not exist separately under the old schedule, so this is a current-state snapshot — not a year-over-year comparison.

What Makes Up the New Fee — composition by record type (2026 only)
current-state mix; no 2025 equivalent (these categories did not exist separately)

Gross of private-provider discounts; excludes flood & misc admin fees.

Discounts Applied

Discounts granted under the new schedule, by type.

Consideration: nearly all discounting is the private-provider inspections credit — an intended feature of the schedule, not revenue leakage.
